Market Assessment

RISK-ON regime confirmed: VIX calm at 17.4, yield curve positive, HY spreads tight. Supportive for quality longs, but the portfolio is already at maximum 6/6 positions and heavily concentrated in semiconductors/AI compute. No new capital should be deployed into overlapping themes.

REGIME: RISK-ON

MSFT	47.4	$379.40	$379.40	$18,000	$+0	+0.0%

Notes: Portfolio is full at 6/6 with $67,755 idle cash — but every top scanner signal (SNDK, ARM, SMH, SOXX, NVDA, AMD, QCOM, AMAT) is a semiconductor/AI name that would dangerously compound existing concentration. AVGO, TSM, CLOU, GOOGL, MSFT already saturate the AI-compute and cloud themes. No new entry justified: adding any semi would violate the no-overlap discipline and concentrate risk. All positions remain above stop and below take-profit thresholds with intact theses. Holding the book and the dry powder is the disciplined move.

Memory applied: No prior trade history recorded. Applied core framework discipline: refused to chase the overbought momentum names (AMAT RSI 76, SNDK RSI 70.9, ARM RSI 69) despite STRONG BUY tags — catalyst alone does not justify entry without favorable technicals and into an already-concentrated sector. Maintained max-position and sector-overlap guardrails over capital deployment urge.
