Market Assessment

RISK-ON regime confirmed: VIX benign at 19.5, yield curve positive at +0.34%, and HY credit spreads exceptionally tight signal healthy risk appetite. However, the portfolio is concentrated in semiconductors/AI-infrastructure names that are showing broad drawdowns despite the constructive macro backdrop, indicating sector-specific consolidation rather than systemic stress. The portfolio is fully allocated at 6/6 positions, so no new entry is possible without an exit.

REGIME: RISK-ON

Macro Snapshot

Indicator	Value	Indicator	Value
VIX	19.49	US Dollar (DXY)	101.39
Yield Curve 10Y-2Y	0.34	HY Credit (bps)	2.65
10Y Treasury (%)	4.51	Fed Funds Rate (%)	3.63

Portfolio Snapshot

Total: **$170,130** | Cash: **$67,755** | Positions: **6/6**

Ticker	Shares	Entry	Current	Value	P&L $	P&L %
CLOU	839.0	$21.45	$21.50	$18,038	$+38	+0.2%
AVGO	44.1	$408.61	$380.15	$16,746	$-1,254	-7.0%
ARKX	470.7	$33.99	$32.80	$15,440	$-560	-3.5%
TSM	40.1	$449.32	$436.39	$17,482	$-518	-2.9%
GOOGL	48.9	$368.03	$346.13	$16,929	$-1,071	-6.0%
MSFT	47.4	$379.40	$373.94	$17,741	$-259	-1.4%

Notes: Portfolio is fully allocated at 6/6 positions with $67,755 cash held as dry powder against drawdown — no new entries possible without an exit, and no current holding has breached its 8% stop or hit a 20% take-profit, so all positions are HOLD. The book is heavily concentrated in semiconductors/AI infrastructure (AVGO, TSM, CLOU, MSFT, GOOGL all AI-adjacent), creating correlated downside risk evident in the simultaneous drawdowns. GOOGL (RSI 37.4) and AVGO (RSI 43.5) are the most oversold and best positioned for mean reversion. I am declining to add to losers despite high scanner scores — averaging down on an unconfirmed bottom violates the 'catalyst + chart must both confirm' rule, as none of these names show a technical reversal pattern yet. AVGO is the watch item closest to its stop.

Memory applied: No prior trade history exists, so decisions rest on framework discipline: (1) never chase momentum or average down without technical confirmation — applied by holding rather than adding to GOOGL/AVGO despite strong scanner signals; (2) respect the 6/6 position cap by not forcing a new entry; (3) maintain stop/target discipline, with AVGO flagged as the nearest-to-stop holding for next-session monitoring.
