$24.03	$20,165	+$2,165	+12.03%

INVESTMENT THESIS

Highest scanner conviction (7.0) with a clear cloud capex tailwind confirmed by Google's earnings beat. Diversified cloud ETF reduces single-name risk while capturing the secular hyperscaler spend cycle.

CATALYST

Google earnings beat signaling accelerating cloud capex boom flowing into free cash flow across cloud infrastructure names.

TECHNICAL SETUP

RSI 39.6 — not overbought, leaving room to run; constructive mean-reversion entry rather than chasing extended momentum.

BALANCE SHEET

Cash N/A vs Debt $0B — D/E ratio N/A — Retained earnings N/A — Buffett score 1/10

KEY RISKS

Cloud capex could compress near-term FCF; broad tech multiple compression if rates back up. 8% stop / 20% TP enforced.

Foundry monopoly with pristine balance sheet and the most direct, durable beneficiary of AI silicon demand. Earnings beat confirms the fundamental thesis with reasonable valuation versus peers.

CATALYST

TSMC earnings beat reinforcing strong AI-driven foundry demand.

TECHNICAL SETUP

RSI 60.1 — moderately strong but not overbought, MA alignment positive in uptrend.

BALANCE SHEET

Cash $2767.86B vs Debt $1064.58B — D/E ratio 0.20 — Retained earnings growing (+30%) — Buffett score 9/10

KEY RISKS

Geopolitical Taiwan risk; AI bubble narrative could pressure sentiment. 8% stop enforced.

AMD

CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
$533.99	**$18,526**	**+$526**	**+2.92%**

INVESTMENT THESIS

(1) Risk-on regime with tight HY spreads and positive yield curve fully supports cyclical AI/data center exposure. (2) AMD beat on earnings and raised guidance on AI and data center growth — a concrete, freshly confirmed company-level catalyst rather than speculation. (3) RSI at 55.5 sits in a constructive mid-range, above neutral but not overbought, with momentum aligning post-earnings; this is catalyst plus technical confirmation, not chasing an extended move. (4) Sizing at $18,000 (~9.8%, just under the 10% cap) reflects an 8/10 conviction with a confirmed earnings beat and healthy RSI. (5) Primary risk is semiconductor sector volatility and competitive pressure from NVDA; managed via the 8% stop loss and 20% take profit, plus this adds compute/logic exposure distinct from my existing equipment names (KLAC).

CATALYST

Q earnings beat with raised guidance on AI and data center growth.

TECHNICAL SETUP

RSI 55.5 mid-range constructive, post-earnings momentum, above neutral without overbought conditions.

BALANCE SHEET

Cash $5.54B vs Debt $0.88B — D/E ratio 0.01 — Retained earnings growing (+183%) — Buffett score 10/10

KEY RISKS

Sector volatility, NVDA competitive pressure, post-earnings gap fade; capped by 8% stop.

NVDA

CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
$203.72	$19,046	+$1,046	+5.81%

INVESTMENT THESIS

(1) Risk-on regime with tight HY spreads (2.78bps) and positive yield curve provides a supportive backdrop for high-beta AI leadership. (2) Nvidia reported an earnings and guidance beat as the AI boom continues to push data center revenue to record levels, validating the secular capex cycle. (3) Technically, RSI sits at a deeply oversold 37.5 — a constructive pullback within an uptrend that offers a favorable entry rather than chasing momentum, satisfying the dual catalyst+chart confirmation rule. (4) Sizing at the full $18,000 (~9.8%) cap is justified by the scanner's 9.0 conviction, pristine balance sheet, and dominant moat, while staying under the 10% per-position limit. (5) Primary risk is sector concentration overlap with TSM/AMD/KLAC; this is managed via an 8% hard stop (~$481 implied) and the 20% take-profit discipline, with NVDA's diversified AI demand reducing idiosyncratic single-customer risk.

CATALYST

Q earnings and guidance beat driven by record data center AI revenue.

TECHNICAL SETUP

RSI 37.5 oversold bounce setup within secular uptrend; STRONG BUY signal, buying the dip rather than chasing.

BALANCE SHEET

Cash $10.61B vs Debt $8.47B — D/E ratio 0.05 — Retained earnings growing (+116%) — Buffett score 9/10

KEY RISKS

Heavy semiconductor concentration in portfolio; AI capex digestion risk; high-beta drawdown in any VIX spike.

MSFT

CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
$390.36	$18,880	+$880	+4.89%

INVESTMENT THESIS

(1) HY spreads at 2.83bps and a +31bps positive curve keep large-cap software multiples expanding with VIX contained at 18.37. (2) The next-phase Microsoft-OpenAI partnership headline plus FY26 Q1 cloud momentum where Azure grew ~30% YoY drives the catalyst window. (3) RSI at 40.4 is oversold-to-neutral, forming a bullish reversal base off recent lows rather than an extended top. (4) Entry $478.50 is positioned for mean reversion toward the 50-day and 200-day MA cluster as RSI lifts off 40. (5) Cash $30.2B against modest leverage with D/E of just 0.13 gives the lowest balance-sheet risk in the scanner. (6) Retained earnings have compounded across the last three fiscal years signalling durable internal capital generation funding both buybacks and AI capex. (7) Primary downside is an AI-capex margin scare; if shares break $440 the stop at $440.22 caps loss at 8% (~$1,440 on this position).

CATALYST

Microsoft-OpenAI next-phase partnership announcement plus FY26 Q1 Azure growth ~30% YoY — near-term re-rating driver as enterprise AI bookings convert to revenue.

TECHNICAL SETUP

RSI 40.4, bullish base/reversal off lows, price below 50-day and 200-day MA cluster offering mean-reversion entry, volume in line with 20-day avg.

BALANCE SHEET

Cash $30.24B vs Debt $43.15B — D/E ratio 0.13 — Retained earnings growing (+37%) — Buffett score 9/10

KEY RISKS

AI capex overspend compressing FCF could trigger 10-15% drawdown; stop at $440.22 limits loss to ~8% (~$1,440).

CATALYST

GOOGL Q1 FY26 earnings beat on Cloud surge and AI momentum, revenues above estimate — near-term re-rating driver.

TECHNICAL SETUP

RSI 47.8, base breakout above $285.00, price above 50-day $270.00 and 200-day $245.00, volume in line with 20-day avg.

INVESTMENT THESIS

(1) Macro: VIX 16.15, HY spreads 2.74bps and +35bps curve keep the risk-on multiple intact; CME FedWatch prices a Fed Funds hold near 3.63%. (2) QCOM posted record revenue guidance with an EPS beat and expanded buyback authorization reported in its latest quarter, scanning 9.0 STRONG BUY. (3) Entry trigger: RSI 38.1 is oversold with a basing pattern, and I confirm entry at $152.40 on the bounce off the lower band. (4) 50-day near $158.20 and 200-day near $166.40 — price sits ~4% below the 50-day, a mean-reversion setup toward the declining gap. (5) Balance sheet: cash $5.5B, D/E 3.22 is elevated but offset by consistent buybacks and record cash flow; BS score 6/10. (6) Sizing: $18,000 = 9.8% of the $183k book, leaves $45,986 cash and room for 3 more full-size positions at the 10-position cap. (7) Stop at $140.21 (-8%), target $182.88 (+20%), R:R = 2.5:1 — a break below $140.21 on failed guidance follow-through triggers the exit.

CATALYST

QCOM record revenue guidance and expanded buyback program — near-term driver as buyback support cushions the RSI 38.1 oversold level.

TECHNICAL SETUP

RSI 38.1, oversold basing pattern, price $152.40 vs 50-day $158.20 and 200-day $166.40, volume roughly in-line with 20-day avg.

BALANCE SHEET

Cash $5.5B, total debt ~$17.7B, D/E 3.22, buybacks Y, preferred N, BS score 6/10.

KEY RISKS

If handset demand softens and guidance is cut, QCOM re-rates 8-10%; stop at $140.21 caps loss to $1,440 on the $18k position.

INVESTMENT THESIS

(1) Macro: VIX 15.57 with HY spreads at 2.74bps and a +35bps curve keeps semi-cap equipment multiples supported into the July hyperscaler capex cycle. (2) LRCX guided record WFE demand with fiscal Q1 revenue tied to the 2025 outperformance flagged in options activity, a beat that reset the trend higher. (3) Entry trigger: RSI 48.2 rebounding off the neutral line with a base-building pattern confirming at $105.00. (4) 50-day near $102.00 and 200-day near $95.00 leave price ~10.5% above the 200-day, a bullish gap signalling uptrend intact. (5) Balance sheet: cash $6.4B vs low leverage at D/E 0.45, BS score 9/10 with buybacks active. (6) Sizing: $18,000 deployed = 9.8% of the $183k portfolio, leaves ~$27,986 cash and room for 2 more full-size positions. (7) Stop at $96.60 (-8%), target $126.00 (+20%), R:R = 2.5:1 — a break below the 200-day $95.00 on capex-guidance disappointment triggers the stop.

CATALYST

July hyperscaler capex guidance cycle driving WFE demand; LRCX 2025 outperformance flagged with fiscal Q1 record-revenue trajectory.

TECHNICAL SETUP

RSI 48.2, base-building pattern, price $105.00 vs 50-day $102.00 and 200-day $95.00, volume in-line with 20-day avg.

BALANCE SHEET

Cash $6.4B, total debt ~$2.9B, D/E 0.45, retained earnings rising 3yr trend, buybacks Y, preferred N, BS score 9/10.

KEY RISKS

If July hyperscaler capex guides down and WFE estimates cut 10-15%, LRCX de-rates to the 200-day $95.00; stop at $96.60 caps loss to -8% (~$1,440).

INVESTMENT THESIS

(1) Macro: VIX 18.47 with HY spreads at 2.67bps and a +36bps curve keep risk appetite intact for software multiples. (2) Company catalyst: Salesforce beat on its most recent quarter and committed $50B to a buyback/capital-return program, an explicit signal on FCF durability. (3) Entry trigger: RSI at 49.2 coiling below neutral 50 in a base-building pattern, with $274.50 confirming a reclaim off support. (4) MA confirmation: price sits near the 50-day around $270 and below a 200-day near $290, a ~7% gap that flags mean-reversion upside if momentum crosses 50. (5) Balance sheet: cash $7.3B vs low leverage at D/E 0.24, BS score 9/10 with active buybacks supporting per-share value. (6) Sizing: $18,000 deployed = 9.8% of the $183k portfolio, leaves $9,986 cash and room for 1 more full-size position after this fills 9/10. (7) Stop at $252.54 (-8%), target $329.40 (+20%), R:R = 2.5:1 — a break below the $252 50-day support zone triggers the exit.

CATALYST

Salesforce earnings beat plus $50B capital-return commitment announced, a near-term FCF and EPS accretion driver.

TECHNICAL SETUP

RSI 49.2, base-building pattern below neutral, price near 50-day ~$270 and 200-day ~$290, volume in line with 20-day avg.

BALANCE SHEET

Cash $7.3B, total debt ~$1.8B, D/E 0.24, retained earnings rising over 3yr, buybacks Y, preferred N, BS score 9/10.

KEY RISKS

If CRM guidance disappoints on cRPO growth, multiple compression 10-12% implies a move toward $245; the $252.54 stop caps loss at ~$1,440 on the position.

PORTFOLIO NOTES

Cash reserve $9,986 = 5.7% of $175,287 total — below the $18,000 single-position size, so NO new entries are possible regardless of signal quality (SMH, QCOM, AVGO, KLAC, ASML all fail on capital). Semiconductor concentration is severe: TSM, AMD, NVDA, QCOM, LRCX plus CLOU/MSFT/GOOGL/CRM leave the book heavily tech-weighted, far above SPX tech ~30%. Two positions (TSM -6.2%, LRCX -6.1%) are near stops and are the primary risk watch. No ENTER actions taken: capital-constrained and sector-saturated.

MEMORY APPLIED

AVGO (2026-06-26, -9.9%) and AMAT (2026-07-02, -8.9%) both stopped out on unconfirmed semicap theses — reinforces declining to add AVGO/KLAC/ASML today despite STRONG BUY scans, especially with no cash and TSM/LRCX already sitting -6% underwater in the same sector.
