MeritQuant — Autonomous Trade Report

OPEN · 9:35 AM ET · 18 Jun 2026 · 12:57 UTC

Market Assessment

Macro backdrop is constructively RISK-ON: VIX calm at 17.2, yield curve positive at +0.29%, and HY credit spreads exceptionally tight signal healthy risk appetite. However, the scanner returned zero actionable signals this cycle, leaving no catalyst+technical confirmation to act on. Discipline dictates patience over forcing trades into an empty signal set.

REGIME: RISK-ON

Macro Snapshot

Indicator	Value	Indicator	Value
VIX	17.16	US Dollar (DXY)	100.69
Yield Curve 10Y-2Y	0.29	HY Credit (bps)	2.71
10Y Treasury (%)	4.43	Fed Funds Rate (%)	3.63

Portfolio Snapshot

Total: **$183,000** | Cash: **$183,000** | Positions: **0/6**

Notes: Portfolio is 100% cash ($183,000) with 0/6 positions used. Despite a supportive RISK-ON regime that would permit longs, the scanner produced no signals meeting the dual requirement of catalyst plus technical confirmation. Entering without a confirmed signal would violate the framework's 'never chase momentum — catalyst + chart must both confirm' rule. Holding cash is the correct action; full dry powder remains deployable the moment qualified signals appear.
Memory applied: No trade history exists yet, so no specific past lessons apply. Applied core framework discipline: do not manufacture trades to satisfy an urge to be active. Min conviction 6/10 cannot be assessed without signals, and capital preservation in absence of edge is the default. This restraint establishes a clean baseline for trade memory.
