Market Assessment

Macro is cleanly RISK-ON: VIX subdued at 17.1, positive yield curve, tight HY spreads, and SPY firm at $746. The tape supports longs, but the portfolio is heavily concentrated in semiconductors/AI, creating elevated correlation risk despite the constructive regime.

REGIME: RISK-ON

Macro Snapshot

Indicator	Value	Indicator	Value
VIX	17.11	US Dollar (DXY)	100.77
Yield Curve 10Y-2Y	0.27	HY Credit (bps)	2.63
10Y Treasury (%)	4.49	Fed Funds Rate (%)	3.63

Portfolio Snapshot

Total: **$174,904** | Cash: **$67,755** | Positions: **6/6**

Ticker	Shares	Entry	Current	Value	P&L $	P&L %
CLOU	839.0	$21.45	$21.75	$18,247	$+247	+1.4%
AVGO	44.1	$408.61	$411.35	$18,120	$+120	+0.7%
ARKX	470.7	$33.99	$34.56	$16,268	$+268	+1.7%
TSM	40.1	$449.32	$462.12	$18,513	$+513	+2.8%
GOOGL	48.9	$368.03	$368.03	$18,000	$+0	+0.0%
MSFT	47.4	$379.40	$379.40	$18,000	$+0	+0.0%

Notes: Portfolio is full at 6/6 with ~$67.7K cash uninvested — no new entries possible without an exit, and no current thesis is broken or at a stop/target. Critical concern: concentration risk, as AVGO/TSM/CLOU plus mega-cap MSFT/GOOGL are heavily AI/semi-correlated. The strongest scanner names (SNDK RSI 70.9, AMAT RSI 76, LRCX 68.6) are overbought and would worsen overlap — explicitly declining to chase. If a rotation opportunity arises, ARKX is the only non-core diversifier and CLOU the weakest conviction; no action warranted today.

Memory applied: No documented trade history yet, so applied framework defaults: refused to chase overbought momentum (SNDK/AMAT/LRCX above RSI 70), avoided adding to an already semiconductor-saturated book, and held all positions since none hit the 8% stop or 20% take-profit nor showed thesis breakage.
