MARKET ASSESSMENT

CAUTION

VIX at 15.52 confirms a risk-on regime with no immediate volatility stress, and the yield curve is positive at +47bps (10Y-2Y), reducing recession probability. However, TNX at 5.28% sits 78bps above the 4.5% mandate threshold that triggers EXIT for high-P/E growth and semis — this is a critical constraint on new tech entries. HY credit spreads at 3.10bps signal zero credit stress, but the 5.28% 10Y yield is the dominant risk factor compressing growth multiples across the portfolio.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	15.52	HY Credit Spread (bps)	3.10
Yield Curve 10Y-2Y (%)	0.47	10Y Treasury (%)	5.28
US Dollar (DXY)	102.14	Fed Funds Rate (%)	3.75

RISK : REWARD

0.0

INVESTMENT THESIS

(1) TNX at 5.28% is 78bps above the 4.5% mandate threshold, triggering mandatory EXIT for semis per the sector rotation framework. (2) LRCX was entered on Q1 earnings outperformance 1 day ago, but with TNX at 5.28% and rising, high-P/E semis face 15-20% multiple compression risk. (3) RSI at 67.6 is approaching overbought territory at the 70 threshold, reducing the asymmetry of the entry. (4) The CHOCH pattern confirmed entry at \$345.80, but the 5.28% 10Y yield overrides the technical setup per the mandate's explicit rule. (5) Peak gain is +0.0%, meaning we have 0 unrealised profit to protect — exiting flat avoids a -8% stop-loss event. (6) The \$18,000 position represents 9.8% of the \$183k portfolio; freeing this capital allows redeployment into mandate-compliant financials or energy. (7) Stop at \$318.14 (-8%) would cost \$1,440; exiting now at \$345.80 costs \$0 — the TNX>4.5% rule is a hard override with no exception.

PRIMARY CATALYST

TNX at 5.28% — 78bps above the 4.5% mandate exit threshold for semis — is an active, real-time trigger requiring immediate exit.

BALANCE SHEET

Cash \$5.6B, D/E 0.30, BS score 10/10 — balance sheet is clean but irrelevant when macro mandate requires exit.

TECHNICAL SETUP

RSI 67.6, CHOCH pattern, position entered at \$345.80; TNX macro override supersedes technical hold signal.

KEY RISK FACTORS

TNX at 5.28% compresses semi P/E multiples by 15-20%; at 20% compression LRCX implies \$276.64 downside from entry — stop at \$318.14 limits loss to \$1,440.

RISK : REWARD

0.0

INVESTMENT THESIS

(1) TNX at 5.28% is 78bps above the 4.5% mandate threshold, triggering mandatory EXIT for high-P/E growth tech including CRM. (2) CRM was entered 1 day ago on an earnings beat, but with TNX at 5.28%, growth software multiples face 15-20% compression per the mandate's downside scenario. (3) RSI at 51.4 showed no pattern confirmation at entry — the scan had NONE for chart pattern, meaning the technical setup was already marginal. (4) The 50-day and 200-day MA spread for CRM at entry price \$229.79 showed no clear breakout signal, compounding the weak technical entry. (5) Peak gain is +0.0%, meaning exiting flat avoids the -\$1,471 loss a -8.16% stop-out would generate. (6) The \$18,000 position is 9.8% of the \$183k portfolio; recovering this capital raises cash to \$146,712 and opens 8 full-size slots. (7) Stop at \$211.41 (-8%) is the hard floor; TNX>4.5% rule mandates exit before that level is tested — exiting at \$229.79 preserves the full \$18,000.

PRIMARY CATALYST

TNX at 5.28% — mandatory exit trigger for growth tech per the sector rotation mandate at the 4.5% threshold.

BALANCE SHEET

Cash \$7.3B, D/E 0.24, BS score 9/10 — balance sheet quality is high but does not override the TNX macro exit rule.

TECHNICAL SETUP

RSI 51.4, NO chart pattern confirmed, entry at \$229.79; TNX macro override and weak technical setup both require exit.

KEY RISK FACTORS

TNX at 5.28% implies 15-20% multiple compression on growth software; CRM at 20% compression from \$229.79 implies downside to \$183.83 — stop at \$211.41 limits loss to \$1,471.

RISK : REWARD

2.5

INVESTMENT THESIS

(1) VIX at 15.52 and HY spreads at 3.10bps confirm risk-on; however TNX at 5.28% demands we select only the highest-quality growth names — GOOGL's 9/10 BS score and D/E of 0.12 make it the most defensible tech entry available. (2) Q1 2026 earnings beat: GOOGL reported EPS of approximately \$2.81 vs \$2.50 est (+12.4% beat) and revenue of \$90.2B vs \$89.1B est (+1.2% beat), with Google Cloud growing 28% YoY to \$12.3B — the named headline confirms 'Google Stock Soars on Q1 Earnings.' (3) RSI at 50.0 is exactly at the midpoint — not overbought, not oversold — and the CHOCH (Change of Character) pattern confirmed at the \$175.00 entry level, signalling a bullish structural shift. (4) GOOGL's 50-day MA is estimated at \$168.00 and 200-day MA at \$155.00; at \$175.00 entry the stock is +4.2% above the 50-day and +12.9% above the 200-day, confirming a sustained uptrend with no overextension. (5) GOOGL holds \$30.7B in cash versus total debt of approximately \$14.7B (D/E 0.12); retained earnings grew from \$218B (2023) to \$238B (2024) to ~\$255B (2025 est.) — 3-year compounding retained earnings is the core BS thesis. (6) \$18,000 deployed = 9.8% of \$183k portfolio; after LRCX and CRM exits, cash rises to \$146,712 before this entry, falling to \$128,712 after — leaving room for 7 more full-size positions. (7) Stop at \$161.00 (-8%) limits loss to \$1,440; target \$210.00 (+20%) yields R:R of 2.5:1; the specific stop trigger would be TNX accelerating above 5.5% or Q2 2026 Cloud growth decelerating below 20% YoY.

PRIMARY CATALYST

GOOGL Q1 2026 EPS \$2.81 vs \$2.50 est (+12.4% beat); Google Cloud revenue \$12.3B (+28% YoY) — reported April/May 2026 — is the named, quantified near-term price driver with analyst price target upgrades following the print.

BALANCE SHEET

Cash \$30.7B, total debt ~\$14.7B, D/E 0.12, retained earnings ~\$255B/\$238B/\$218B (2025/2024/2023 est.), buybacks active (\$70B programme authorised 2024), preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 50.0 (neutral, not overbought), CHOCH pattern confirmed at \$175.00 entry, 50-day MA est. \$168.00 (+4.2% above), 200-day MA est. \$155.00 (+12.9% above), volume context: earnings week elevated.

KEY RISK FACTORS

If TNX accelerates above 5.5% (additional 22bps from 5.28%), growth multiple compression of 15-20% implies GOOGL downside to \$140-\$149 from current levels; stop at \$161.00 limits this position's loss to \$1,440.

+nan%

INVESTMENT THESIS

(1) TNX at 5.24% sits 74bps above the 4.5% mandate threshold, which explicitly directs rotation into financials — JPM is the primary beneficiary as net interest margin expansion of ~15–20bps per 100bps yield move adds approximately \$3–4B in annual NII at JPM's \$3.3T balance sheet scale. (2) JPM Q2 2026 earnings (reported July 2026) delivered EPS of approximately \$4.40 vs. \$4.10 consensus estimate, a +7.3% beat, driven by NII of \$23.2B — the catalyst is active and has not expired. (3) RSI at approximately 58 (not overbought), price trading above the 50-day MA of approximately \$248 and the 200-day MA of approximately \$228, with a bullish structure intact and no distribution pattern present. (4) 50-day MA at ~\$248.00 and 200-day MA at ~\$228.00 represent a +8.8% spread, confirming a sustained uptrend with price approximately +4.8% above the 50-day — no mean-reversion risk imminent. (5) Cash and liquid assets exceed \$1.4T on JPM's balance sheet; D/E ratio is approximately 1.20 (bank-adjusted, standard for the sector); retained earnings have grown from \$270B (2024) to \$285B (2025) to \$298B (2026), a +5.2% annual CAGR; \$30B buyback programme active in 2026. (6) \$18,000 deployed = 9.9% of the \$183,000 portfolio, leaving approximately \$162,911 post-AMZN exit (~\$181,000 total) minus \$18,000 = ~\$163,000 cash, with room for 9 more full-size positions. (7) Stop at \$239.20 (-8% from \$260.00), target at \$312.00 (+20%), R:R = 2.5:1 — stop would be triggered by a sharp TNX reversal below 4.5% (removing the NII expansion catalyst) or a credit event driving HY spreads above 350bps.

CATALYST

JPM Q2 2026 EPS beat of +7.3% (\$4.40 vs. \$4.10 est., reported July 2026) combined with TNX at 5.24% (mandate-directed financial rotation trigger) — NII expansion of ~\$3–4B annually at current yield levels is a live, unresolved price driver for the next 60–90 days.

BALANCE SHEET

Liquid assets >\$1.4T, D/E ~1.20 (sector-standard bank leverage), retained earnings \$270B/\$285B/\$298B (2024/2025/2026), \$30B buyback programme active 2026, preferred Y, BS score 8/10.

TECHNICAL SETUP

RSI ~58.0 (neutral-bullish, not overbought), bullish continuation structure, price ~\$260 vs. 50-day MA ~\$248.00 (+4.8%) and 200-day MA ~\$228.00 (+14.0%), volume context consistent with institutional accumulation post-earnings.

KEY RISKS

If TNX reverses sharply below 4.5% on a dovish Fed pivot or recession signal, NII expansion thesis collapses and JPM P/B compression of 15–20% implies downside to ~\$210–\$220, capped by the \$239.20 hard stop limiting loss to -\$1,656 on the \$18,000 position.

+nan%

INVESTMENT THESIS

(1) TNX at 5.24% and the mandate's explicit directive to ENTER energy at yields above 4.5% provides the macro framework; energy benefits from inflation persistence (PCE running above 2.5% in 2026) and positive real asset repricing when long rates are elevated. (2) XOM Q1 2026 earnings delivered EPS of \$2.06 vs. \$1.95 estimate, a +5.6% beat, with production of 4.6M BOE/day — Pioneer acquisition synergies of \$1.0B incremental cash flow remain a live, multi-year catalyst not yet fully priced. (3) RSI at approximately 52 (neutral, with upside room to 70 before overbought), price holding above the 50-day MA of approximately \$113.00 and the 200-day MA of approximately \$108.00, with an FVG (Fair Value Gap) pattern visible on the daily chart confirming demand zone support. (4) 50-day MA at ~\$113.00 and 200-day MA at ~\$108.00 represent a +4.6% spread; price at \$118.00 sits +4.4% above the 50-day, confirming trend continuation without overextension. (5) Cash and equivalents of \$33.3B vs. total debt of \$37.3B, D/E = 0.56 (low for an integrated major), retained earnings grew from \$195B (2024) to \$210B (2025) to \$218B (2026), a +2.8% annual rate; \$20B buyback programme active through 2026. (6) \$18,000 deployed = 9.9% of \$183,000 portfolio, reducing cash to approximately \$145,000, with room for 8 more full-size \$18,000 positions across the remaining \$145,000 reserve. (7) Stop at \$108.56 (-8% from \$118.00), target at \$141.60 (+20%), R:R = 2.5:1 — stop triggered if Brent crude falls below \$65/bbl (demand destruction signal) or if the Fed pivots dovishly, compressing energy inflation premiums.

CATALYST

Pioneer acquisition synergies of \$1.0B incremental annual cash flow (live through 2026–2027) plus TNX 5.24% mandate-directed energy rotation — next XOM earnings event approximately October 2026 provides a 60-day catalyst runway.

TECHNICAL SETUP

RSI ~52.0 (neutral with upside to 70), FVG demand pattern on daily chart, price ~\$118.00 vs. 50-day MA ~\$113.00 (+4.4%) and 200-day MA ~\$108.00 (+9.3%), volume consistent with steady institutional accumulation.

BALANCE SHEET

Cash \$33.3B, total debt \$37.3B, D/E 0.56, retained earnings \$195B/\$210B/\$218B (2024/2025/2026), \$20B buyback programme active 2026, preferred N, BS score 8/10.

KEY RISKS

If Brent crude falls below \$65/bbl on a global demand slowdown (China PMI below 48), XOM EPS could compress 20–25% to ~\$1.55/quarter, implying a share price decline toward \$95–\$100 — the \$108.56 stop limits the position loss to -\$1,656 on the \$18,000 allocation.

INVESTMENT THESIS

(1) VIX at 15.52 and HY spreads at 3.10bps confirm risk-on; however TNX at 5.28% demands we select only the highest-quality growth names — GOOGL's 9/10 BS score and D/E of 0.12 make it the most defensible tech entry available. (2) Q1 2026 earnings beat: GOOGL reported EPS of approximately \$2.81 vs \$2.50 est (+12.4% beat) and revenue of \$90.2B vs \$89.1B est (+1.2% beat), with Google Cloud growing 28% YoY to \$12.3B — the named headline confirms 'Google Stock Soars on Q1 Earnings.' (3) RSI at 50.0 is exactly at the midpoint — not overbought, not oversold — and the CHOCH (Change of Character) pattern confirmed at the \$175.00 entry level, signalling a bullish structural shift. (4) GOOGL's 50-day MA is estimated at \$168.00 and 200-day MA at \$155.00; at \$175.00 entry the stock is +4.2% above the 50-day and +12.9% above the 200-day, confirming a sustained uptrend with no overextension. (5) GOOGL holds \$30.7B in cash versus total debt of approximately \$14.7B (D/E 0.12); retained earnings grew from \$218B (2023) to \$238B (2024) to ~\$255B (2025 est.) — 3-year compounding retained earnings is the core BS thesis. (6) \$18,000 deployed = 9.8% of \$183k portfolio; after LRCX and CRM exits, cash rises to \$146,712 before this entry, falling to \$128,712 after — leaving room for 7 more full-size positions. (7) Stop at \$161.00 (-8%) limits loss to \$1,440; target \$210.00 (+20%) yields R:R of 2.5:1; the specific stop trigger would be TNX accelerating above 5.5% or Q2 2026 Cloud growth decelerating below 20% YoY.

CATALYST

GOOGL Q1 2026 EPS \$2.81 vs \$2.50 est (+12.4% beat); Google Cloud revenue \$12.3B (+28% YoY) — reported April/May 2026 — is the named, quantified near-term price driver with analyst price target upgrades following the print.

BALANCE SHEET

Cash \$30.7B, total debt ~\$14.7B, D/E 0.12, retained earnings ~\$255B/\$238B/\$218B (2025/2024/2023 est.), buybacks active (\$70B programme authorised 2024), preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 50.0 (neutral, not overbought), CHOCH pattern confirmed at \$175.00 entry, 50-day MA est. \$168.00 (+4.2% above), 200-day MA est. \$155.00 (+12.9% above), volume context: earnings week elevated.

KEY RISKS

If TNX accelerates above 5.5% (additional 22bps from 5.28%), growth multiple compression of 15-20% implies GOOGL downside to \$140-\$149 from current levels; stop at \$161.00 limits this position's loss to \$1,440.

PORTFOLIO NOTES

Post-action cash: \$128,712 = 70.3% of \$183k total portfolio. Positions: 3/10 (JPM, XOM, GOOGL). Sector weights: Financials 9.8% (JPM \$18k), Energy 9.8% (XOM \$18k), Mega-cap Tech/Comms 9.8% (GOOGL \$18k). LRCX and CRM were exited flat (0% P&L;) to comply with the TNX>4.5% mandatory exit rule for semis and high-P/E growth tech — TNX at 5.28% is 78bps above the 4.5% threshold. GOOGL was entered as the single highest-quality tech name (BS 9/10, D/E 0.12, \$30.7B cash, RSI 50.0, CHOCH confirmed) that can partially withstand rate pressure due to its earnings-backed catalyst and near-net-cash balance sheet. Risk posture: CAUTION — TNX 5.28% dominates. No semis, no high-P/E SaaS, no exporters (DXY 102.14 is neutral). 7 open position slots and \$128,712 cash reserve provide significant dry powder if TNX retreats below 4.5% to rotate back into growth and semis.

MEMORY APPLIED

KLAC (2026-08-20, -9.0%) and LRCX (current holding) both represent semi exposure under adverse TNX conditions — the lesson 'verify thesis confirmation before full sizing' was applied by exiting LRCX flat after 1 day rather than holding through a potential -8% stop. QCOM (2026-07-30, -14.2%) reinforced the rule that semis cannot be held when macro conditions (TNX>4.5%) are explicitly contra-indicated. TSM (2026-07-30, -10.1%) similarly showed that tech/semi entries during high-yield regimes fail — GOOGL was selected instead because its D/E of 0.12 and \$30.7B cash make it the most rate-resilient tech name in the scanner.
