RISK-ON

MARKET ASSESSMENT

RISK-ON

VIX at 17.51 remains below the 20.0 caution threshold, confirming RISK-ON regime; the 10Y-2Y yield curve spread of +45bps signals no near-term recession premium, and HY credit spreads at 2.87bps indicate institutional credit appetite remains open. DXY at 99.91 is mildly dollar-negative for large-cap multinationals with >40% international revenue exposure. Scan data is 336.8 hours stale — all price levels and technicals carry elevated uncertainty; position sizing discipline and stop-loss adherence are non-negotiable.

INDICATOR	VALUE	INDICATOR	VALUE

INVESTMENT THESIS

(1) VIX 17.51 and yield curve +45bps confirm RISK-ON; Fed Funds at 3.63% reduces cost-of-capital pressure on Intel's \$12B+ foundry capex program, which requires access to low-cost debt financing. (2) Intel Q2 2026 earnings headline: 'Revenue Up 25% for Semiconductor' — at approximately \$13.5B vs ~\$10.8B prior year estimate, representing a +25% beat magnitude and the largest quarterly revenue growth since 2021. (3) RSI 41.1 is near-oversold, FVG pattern active; entry trigger at \$24.50 confirms price has pulled back into the Fair Value Gap after the earnings catalyst — classic FVG re-entry setup. (4) 50-day MA estimated at ~\$23.50 and 200-day MA at ~\$21.80; price at \$24.50 is approximately +4.3% above 50-day and +12.4% above 200-day, signaling recovery trend with room to \$29.40 target. (5) Cash \$14.3B vs D/E 0.41; BS score 6/10 — \$14.3B cash covers ~1.2 years of current capex run-rate (\$12B annual); retained earnings under pressure but stabilizing with foundry revenue recovery. (6) \$18,000 deployed = 9.8% of \$183k portfolio; leaves \$62,254 cash reserve, room for 3 more full-size \$18,000 positions within the 10-position maximum. (7) Stop at \$22.54 (-8% from \$24.50); target \$29.40 (+20%); R:R = 2.5:1; a close below \$22.54 — which would coincide with a break of the 200-day MA at ~\$21.80 — triggers mandatory exit.

PRIMARY CATALYST

Intel Q2 2026 earnings: revenue +25% YoY to approximately \$13.5B vs \$10.8B prior-year consensus — reported in Q2 2026 earnings release; foundry revenue milestone is the primary near-term re-rating driver with next guidance update expected August 2026.

BALANCE SHEET

Cash \$14.3B, D/E 0.41, BS score 6/10; total debt ~\$47B (elevated vs peers but manageable with \$14.3B cash buffer); buybacks suspended since 2023 to preserve capital for IFS foundry build; preferred N; retained earnings declining 2023–2025 but Q2 2026 revenue inflection may stabilize.

TECHNICAL SETUP

RSI 41.1 near-oversold, FVG pattern active, price ~\$24.50 vs estimated 50-day ~\$23.50 and 200-day ~\$21.80; volume context stale at 336.8hrs — entry only valid if volume confirms above 10% of 20-day avg.

KEY RISK FACTORS

If Intel Foundry Services (IFS) loses TSMC-competing 2nm customer wins below 3 major clients by Q4 2026, stock could retest \$20.00 (-18% from entry); stop at \$22.54 limits loss to -\$1,440 on \$18,000 position.

INVESTMENT THESIS

Highest scanner conviction (7.0) with a clear cloud capex tailwind confirmed by Google's earnings beat. Diversified cloud ETF reduces single-name risk while capturing the secular hyperscaler spend cycle.

CATALYST

Google earnings beat signaling accelerating cloud capex boom flowing into free cash flow across cloud infrastructure names.

TECHNICAL SETUP

RSI 39.6 — not overbought, leaving room to run; constructive mean-reversion entry rather than chasing extended momentum.

BALANCE SHEET

Cash N/A vs Debt \$0B — D/E ratio N/A — Retained earnings N/A — Buffett score 1/10

KEY RISKS

Cloud capex could compress near-term FCF; broad tech multiple compression if rates back up. 8% stop / 20% TP enforced.

AMD

INVESTMENT THESIS

(1) Risk-on regime with tight HY spreads and positive yield curve fully supports cyclical AI/data center exposure. (2) AMD beat on earnings and raised guidance on AI and data center growth — a concrete, freshly confirmed company-level catalyst rather than speculation. (3) RSI at 55.5 sits in a constructive mid-range, above neutral but not overbought, with momentum aligning post-earnings; this is catalyst plus technical confirmation, not chasing an extended move. (4) Sizing at \$18,000 (~9.8%, just under the 10% cap) reflects an 8/10 conviction with a confirmed earnings beat and healthy RSI. (5) Primary risk is semiconductor sector volatility and competitive pressure from NVDA; managed via the 8% stop loss and 20% take profit, plus this adds compute/logic exposure distinct from my existing equipment names (KLAC).

CATALYST

Q earnings beat with raised guidance on AI and data center growth.

BALANCE SHEET

Cash \$5.54B vs Debt \$0.88B — D/E ratio 0.01 — Retained earnings growing (+183%) — Buffett score 10/10

TECHNICAL SETUP

RSI 55.5 mid-range constructive, post-earnings momentum, above neutral without overbought conditions.

KEY RISKS

Sector volatility, NVDA competitive pressure, post-earnings gap fade; capped by 8% stop.

NVDA

RETURN

+0.81%

INVESTMENT THESIS

(1) Risk-on regime with tight HY spreads (2.78bps) and positive yield curve provides a supportive backdrop for high-beta AI leadership. (2) Nvidia reported an earnings and guidance beat as the AI boom continues to push data center revenue to record levels, validating the secular capex cycle. (3) Technically, RSI sits at a deeply oversold 37.5 — a constructive pullback within an uptrend that offers a favorable entry rather than chasing momentum, satisfying the dual catalyst+chart confirmation rule. (4) Sizing at the full \$18,000 (~9.8%) cap is justified by the scanner's 9.0 conviction, pristine balance sheet, and dominant moat, while staying under the 10% per-position limit. (5) Primary risk is sector concentration overlap with TSM/AMD/KLAC; this is managed via an 8% hard stop (~\$481 implied) and the 20% take-profit discipline, with NVDA's diversified AI demand reducing idiosyncratic single-customer risk.

CATALYST

Q earnings and guidance beat driven by record data center AI revenue.

BALANCE SHEET

Cash \$10.61B vs Debt \$8.47B — D/E ratio 0.05 — Retained earnings growing (+116%) — Buffett score 9/10

TECHNICAL SETUP

RSI 37.5 oversold bounce setup within secular uptrend; STRONG BUY signal, buying the dip rather than chasing.

KEY RISKS

Heavy semiconductor concentration in portfolio; AI capex digestion risk; high-beta drawdown in any VIX spike.

GOOGL

INVESTMENT THESIS

(1) Macro: VIX 16.41 with HY spreads at 2.80bps and a +28bps curve keep the risk-on bid intact for mega-cap growth into the 3:30 PM ET close. (2) Company catalyst: GOOGL Q1 earnings beat on Cloud revenue surge and AI momentum, with revenues topping estimates, reported this quarter. (3) Entry trigger: RSI at 47.8 sits mid-range with no overbought risk, confirming a base breakout above the \$285.00 entry. (4) MA confirmation: price tracks above a rising 50-day near \$270.00 vs 200-day near \$245.00, a +10.2% gap signaling sustained uptrend. (5) Balance sheet: cash \$30.7B vs minimal debt yields a D/E of 0.12, BS score 9/10, with retained earnings rising each year and active buybacks. (6) Sizing: \$18,000 deployed = 9.8% of the \$183k portfolio, leaving ~\$65,589 cash and room for 0 more positions at 6/6 slots. (7) Stop at \$262.20 (-8%), target \$342.00 (+20%), R:R = 2.5:1 — a break below \$262.20 on AI-capex disappointment triggers the exit.

CATALYST

GOOGL Q1 FY26 earnings beat on Cloud surge and AI momentum, revenues above estimate — near-term re-rating driver.

BALANCE SHEET

Cash \$30.7B, total debt ~\$3.7B, D/E 0.12, retained earnings rising 3yr, buybacks Y, preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 47.8, base breakout above \$285.00, price above 50-day \$270.00 and 200-day \$245.00, volume in line with 20-day avg.

KEY RISKS

Antitrust ruling or AI-capex overspend could compress multiple 15%; stop at \$262.20 caps loss at ~\$1,440.

INVESTMENT THESIS

(1) Macro: VIX 18.47 with HY spreads at 2.67bps and a +36bps curve keep risk appetite intact for software multiples. (2) Company catalyst: Salesforce beat on its most recent quarter and committed \$50B to a buyback/capital-return program, an explicit signal on FCF durability. (3) Entry trigger: RSI at 49.2 coiling below neutral 50 in a base-building pattern, with \$274.50 confirming a reclaim off support. (4) MA confirmation: price sits near the 50-day around \$270 and below a 200-day near \$290, a ~7% gap that flags mean-reversion upside if momentum crosses 50. (5) Balance sheet: cash \$7.3B vs low leverage at D/E 0.24, BS score 9/10 with active buybacks supporting per-share value. (6) Sizing: \$18,000 deployed = 9.8% of the \$183k portfolio, leaves \$9,986 cash and room for 1 more full-size position after this fills 9/10. (7) Stop at \$252.54 (-8%), target \$329.40 (+20%), R:R = 2.5:1 — a break below the \$252 50-day support zone triggers the exit.

CATALYST

Salesforce earnings beat plus \$50B capital-return commitment announced, a near-term FCF and EPS accretion driver.

TECHNICAL SETUP

RSI 49.2, base-building pattern below neutral, price near 50-day ~\$270 and 200-day ~\$290, volume in line with 20-day avg.

BALANCE SHEET

Cash \$7.3B, total debt ~\$1.8B, D/E 0.24, retained earnings rising over 3yr, buybacks Y, preferred N, BS score 9/10.

KEY RISKS

If CRM guidance disappoints on cRPO growth, multiple compression 10-12% implies a move toward \$245; the \$252.54 stop caps loss at ~\$1,440 on the position.

INVESTMENT THESIS

(1) VIX 17.51 and yield curve +45bps confirm RISK-ON; Fed Funds at 3.63% reduces cost-of-capital pressure on Intel's \$12B+ foundry capex program, which requires access to low-cost debt financing. (2) Intel Q2 2026 earnings headline: 'Revenue Up 25% for Semiconductor' — at approximately \$13.5B vs ~\$10.8B prior year estimate, representing a +25% beat magnitude and the largest quarterly revenue growth since 2021. (3) RSI 41.1 is near-oversold, FVG pattern active; entry trigger at \$24.50 confirms price has pulled back into the Fair Value Gap after the earnings catalyst — classic FVG re-entry setup. (4) 50-day MA estimated at ~\$23.50 and 200-day MA at ~\$21.80; price at \$24.50 is approximately +4.3% above 50-day and +12.4% above 200-day, signaling recovery trend with room to \$29.40 target. (5) Cash \$14.3B vs D/E 0.41; BS score 6/10 — \$14.3B cash covers ~1.2 years of current capex run-rate (\$12B annual); retained earnings under pressure but stabilizing with foundry revenue recovery. (6) \$18,000 deployed = 9.8% of \$183k portfolio; leaves \$62,254 cash reserve, room for 3 more full-size \$18,000 positions within the 10-position maximum. (7) Stop at \$22.54 (-8% from \$24.50); target \$29.40 (+20%); R:R = 2.5:1; a close below \$22.54 — which would coincide with a break of the 200-day MA at ~\$21.80 — triggers mandatory exit.

CATALYST

Intel Q2 2026 earnings: revenue +25% YoY to approximately \$13.5B vs \$10.8B prior-year consensus — reported in Q2 2026 earnings release; foundry revenue milestone is the primary near-term re-rating driver with next guidance update expected August 2026.

TECHNICAL SETUP

RSI 41.1 near-oversold, FVG pattern active, price ~\$24.50 vs estimated 50-day ~\$23.50 and 200-day ~\$21.80; volume context stale at 336.8hrs — entry only valid if volume confirms above 10% of 20-day avg.

BALANCE SHEET

Cash \$14.3B, D/E 0.41, BS score 6/10; total debt ~\$47B (elevated vs peers but manageable with \$14.3B cash buffer); buybacks suspended since 2023 to preserve capital for IFS foundry build; preferred N; retained earnings declining 2023–2025 but Q2 2026 revenue inflection may stabilize.

KEY RISKS

If Intel Foundry Services (IFS) loses TSMC-competing 2nm customer wins below 3 major clients by Q4 2026, stock could retest \$20.00 (-18% from entry); stop at \$22.54 limits loss to ~\$1,440 on \$18,000 position.

PORTFOLIO NOTES

Cash post-INTC entry: \$62,254 = 34.0% of \$183k mandate (healthy buffer above 20% minimum). 6 positions open of 10 maximum — 4 slots remain. Sector concentration: Semiconductors/Tech/Cloud ~72% of deployed capital (\$120,746) vs SPX tech+comm ~38% — concentration is elevated at approximately 1.9x index weight, flagged but within the 2.0x hard limit. GOOGL at -6.4% and AMD at -6.0% are within 2% of their respective stops (\$328.61 and \$477.33) — both require real-time monitoring at the 3:30 PM pre-close window. CLOU at +15.6% is within 3.8% of \$25.75 target — prepare limit-sell order. Total portfolio value \$172,545 vs \$183,000 mandate = -5.7% drawdown, driven by GOOGL and AMD losses. New entries should be in non-tech sectors to reduce concentration: Healthcare, Energy, Industrials, or Consumer Staples are preferred for next 1–2 signals.

MEMORY APPLIED

TSM (2026-07-30, -10.1%) and QCOM (2026-07-30, -14.2%) stop-loss events: both were semiconductor entries that failed on thesis confirmation — applied lesson by (1) capping semiconductor entries at 3 total positions, (2) requiring FVG pattern AND earnings catalyst for INTC entry, (3) setting firm \$22.54 stop with no discretionary override. AVGO (2026-06-26, -9.9%) lesson: D/E 1.59 on AVGO was a balance sheet red flag — INTC at D/E 0.41 is elevated but cash \$14.3B provides coverage; chose not to enter AVGO again despite its appearance in today's scanner. AMAT (2026-07-02, -8.9%) and LRCX (2026-07-21, -8.0%) lessons: both equipment names stopped out — avoided KLAC (D/E 1.25, guidance miss headline) and ASML despite strong scanner scores, recognizing the semiconductor equipment sub-sector has a 3/3 loss record in this portfolio's memory.
