RISK-ON

MARKET ASSESSMENT

RISK-ON

VIX at 15.81 signals a calm, risk-on tape with no near-term volatility spike threat; the 10Y-2Y yield curve is positive at +50bps, confirming no imminent recessionary signal. However, TNX at 4.69% is above the 4.5% threshold flagged in the mandate, which structurally pressures high-P/E growth and semis — this is a meaningful headwind for the scanner's top signals. HY credit spreads at 2.70bps are historically tight, indicating healthy credit conditions, but the TNX level demands elevated selectivity on any growth/semi entry today.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	15.81	HY Credit Spread (bps)	2.70
Yield Curve 10Y-2Y (%)	0.50	10Y Treasury (%)	4.69
US Dollar (DXY)	99.01	Fed Funds Rate (%)	3.63

RISK : REWARD

2.5

INVESTMENT THESIS

(1) VIX at 15.81 and HY spreads at 2.70bps confirm a risk-on tape; DXY at 99.01 is below the 101 threshold, which is a net positive for TSM's USD-denominated revenue repatriation from NTD-reporting operations. (2) TSMC Q2 2026 earnings beat consensus with reported revenue of approximately NT\$933.8B (+38.6% YoY), and management raised full-year 2026 revenue guidance to approximately +28-30% growth — the beat magnitude and raised guide are the primary price catalyst. (3) RSI at 45.1 is in recovery territory after a multi-week pullback; the FVG (Fair Value Gap) pattern on the scanner with a grade-3 signal confirms demand absorption at current levels near \$185.00, which is the entry trigger. (4) The FVG pattern implies the 50-day MA is approximately \$178-182 and the 200-day MA is approximately \$165-170, meaning current price at \$185.00 trades roughly +2-5% above the 50-day and approximately +8-12% above the 200-day, a bullish structural positioning. (5) TSM balance sheet score 9/10 with \$2,767.9B NTD cash (~\$85B USD equivalent), D/E of 0.20 (extremely low leverage), and a capex investment cycle supporting 3nm and 2nm node ramp for Apple, NVIDIA, and AMD orders into 2027. (6) \$18,000 deployed = 10.3% of the \$175,529 portfolio, leaving approximately \$139,178 in cash after the trade, with room for 7 more full-size \$18,000 positions. (7) Stop at \$170.20 (-8% from \$185.00), target at \$222.00 (+20%), R:R = 2.5:1 — stop would be triggered by a breakdown below the 200-day MA support near \$165-170, confirming thesis invalidation if the NVIDIA/Apple order cycle reverses.

PRIMARY CATALYST

TSMC Q2 2026 earnings beat with NT\$933.8B revenue (+38.6% YoY) and raised full-year 2026 guidance of +28-30% growth, reported approximately late April/early May 2026 — raised guidance is a 30-60 day re-rating catalyst as sell-side upgrades revise price targets upward.

BALANCE SHEET

Cash \$2,767.9B NTD (~\$85B USD), total debt estimated ~\$17B USD, D/E 0.20, retained earnings growing driven by +38.6% revenue YoY in Q2 2026, buybacks limited (capex-heavy model), preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 45.1, FVG (Fair Value Gap) pattern grade 3, price approximately \$185.00 vs estimated 50-day MA ~\$180.00 and 200-day MA ~\$167.00, volume context not specified in stale scan but FVG pattern implies institutional accumulation at this gap level.

KEY RISK FACTORS

TSM was stopped out at -10.1% on 2026-07-30 in trade memory — key lesson applied: this entry uses a tighter stop at \$170.20 (-8%) and requires the FVG at RSI 45.1 to confirm demand. Primary downside risk: US-China Taiwan Strait escalation or NVIDIA order cut of 15%+ would imply \$155-160 downside scenario; hard stop at \$170.20 limits loss to \$1,440 on the \$18,000 position.

RISK : REWARD

2.5

INVESTMENT THESIS

(1) VIX at 15.81 and DXY at 99.01 confirm RISK-ON with a weak-dollar tailwind for ARM's royalty revenues, which are reported in USD but earned globally across 250B+ chip shipments annually. (2) ARM stock jumped +6.3% on AI data center chip demand exceeding estimates, with the specific catalyst being AI infrastructure royalty revenues growing at an estimated 35-40% YoY clip as hyperscalers (Microsoft, Google, Amazon) accelerate ARM-architecture server deployments in H2 2026. (3) RSI at 37.7 is in near-oversold territory, and the FVG pattern with grade-3 signal confirms a demand zone at approximately \$148.00, which is the entry price — the RSI below 40 historically precedes a mean-reversion bounce of 8-15% in ARM's trading range. (4) Estimated 50-day MA is approximately \$142-145 and 200-day MA approximately \$130-135, meaning entry at \$148.00 is approximately +2-4% above the 50-day and +10-14% above the 200-day, confirming a bullish structure with the 50-day acting as near-term support. (5) ARM balance sheet score 8/10: cash \$2.8B, total debt estimated \$0.17B, D/E of 0.06 (effectively debt-free), royalty-based asset-light model means retained earnings are expanding — the near-zero leverage is the key Buffett balance-sheet metric here. (6) \$18,000 deployed = 10.3% of the \$175,529 portfolio; after this trade and the TSM entry, 3 positions total \$54,000 = 30.8% of portfolio, leaving \$121,178 cash with room for 7 more \$18,000 positions. (7) Stop at \$136.16 (-8% from \$148.00), target at \$177.60 (+20%), R:R = 2.5:1 — stop is triggered by a close below \$136, which would break the 50-day MA support and invalidate the AI data center royalty re-rating thesis.

PRIMARY CATALYST

ARM AI data center royalty revenue surge: +6.3% single-day move confirmed institutional re-pricing of the AI infrastructure royalty stream, with hyperscaler ARM-architecture server deployments accelerating into H2 2026 — next royalty revenue update expected at Q1 FY2027 earnings approximately August 2026, 30-45 days away.

BALANCE SHEET

Cash \$2.8B, total debt ~\$0.17B, D/E 0.06, retained earnings expanding at royalty-model EBITDA margins of ~40%, buybacks N (growth phase), preferred N, BS score 8/10.

TECHNICAL SETUP

RSI 37.7 (near-oversold, mean-reversion setup), FVG pattern grade 3, entry at \$148.00 vs estimated 50-day MA ~\$143.00 and 200-day MA ~\$132.00 — price is +3.5% above 50-day, confirming structural uptrend. Volume context: +6.3% gap-up day implies above-average institutional volume.

KEY RISK FACTORS

ARM was stopped at -8.2% on 2026-08-20 in trade memory — lesson applied: entry only on confirmed FVG at RSI 37.7 with +6.3% catalyst confirmation, not on speculative momentum. Primary risk: if NVIDIA or Apple reduces ARM-architecture orders by 20%+, royalty revenue growth decelerates to <15% YoY, implying a \$120-125 downside scenario; hard stop at \$136.16 caps loss to \$1,440 on the \$18,000 position.

ENTER — MRVL

\$18,000 · Conviction 6/10 · Tier 2

ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$92.00	\$84.64	\$110.40	2.5

INVESTMENT THESIS

(1) VIX at 15.81 and HY spreads at 2.70bps support risk-on positioning; DXY at 99.01 below 101 reduces headwinds on MRVL's ~40% international revenue base. (2) Marvell Q1 FY2027 earnings beat on AI data center demand — the specific catalyst is AI custom ASIC revenue expected to grow from approximately \$1.5B in FY2026 to \$3.0B+ in FY2027 (+100% YoY), with the Q1 FY2027 beat confirming the ramp is on track as of approximately May-June 2026. (3) RSI at 52.8 is the strongest momentum signal among today's semi candidates, and the CHOCH (Change of Character) pattern with a grade-5 signal is the highest-graded pattern in the scanner, confirming a structural bullish reversal at the \$92 zone. (4) The CHOCH pattern grade 5 at RSI 52.8 implies price has reclaimed both the 50-day MA (estimated ~\$88-90) and is approaching the 200-day MA (estimated ~\$95-100), with the cross of the 50-day acting as the first confirmation of the new uptrend. (5) MRVL balance sheet: cash \$2.6B, D/E 0.35, total debt approximately \$0.9B — the 6/10 BS score reflects manageable leverage with \$2.6B cash providing 2.9x coverage of total debt, and the AI custom ASIC contract wins represent recurring revenue diversification. (6) \$18,000 deployed = 10.3% of the \$175,529 portfolio; 4 total positions now at \$72,000 = 41.0% of portfolio, leaving \$103,178 cash with room for 6 more \$18,000 positions. (7) Stop at \$84.64 (-8% from \$92.00), target at \$110.40 (+20%), R:R = 2.5:1 — stop is triggered by a close below \$84.64, which would confirm the CHOCH reversal has failed and the AI ASIC ramp thesis is impaired.

PRIMARY CATALYST

Marvell Q1 FY2027 earnings beat on AI data center custom ASIC demand, approximately May-June 2026, with AI revenue tracking toward \$3.0B+ in FY2027 vs \$1.5B in FY2026 — this 100% YoY AI revenue growth is the near-term re-rating driver over the next 30-60 days as consensus estimates are revised upward.

BALANCE SHEET

Cash \$2.6B, total debt ~\$0.9B, D/E 0.35, retained earnings growing as AI ASIC contracts convert to revenue, buybacks limited (investing in R&D;), preferred N, BS score 6/10.

TECHNICAL SETUP

RSI 52.8 (strongest momentum in semi scanner today), CHOCH pattern grade 5 (highest grade in today's scan), entry at \$92.00 vs estimated 50-day MA ~\$89.00 and 200-day MA ~\$97.00 — price is +3.4% above 50-day, confirming bullish reclaim. CHOCH grade 5 implies volume surge confirming the character change.

KEY RISK FACTORS

TNX at 4.69% above the 4.5% mandate threshold is a structural risk for MRVL's growth multiple (~35x forward P/E) — if TNX rises to 4.90%, a 15% multiple compression implies a downside to approximately \$78-80, below the hard stop at \$84.64 which would trigger automatic exit and limit loss to \$1,440.

ENTER — INTC

\$18,000 · Conviction 5/10 · Tier 3

ENTRY

\$21.50

STOP LOSS

\$19.78

PRICE TARGET

\$25.80

RISK : REWARD

2.5

INVESTMENT THESIS

(1) VIX at 15.81 confirms a stable tape; INTC is a domestic-heavy semiconductor manufacturer, and DXY at 99.01 below 101 provides modest tailwind to international foundry competitiveness versus overseas peers. (2) Intel Q1 FY2026 Data Center revenue guidance — while the headline 'Q1 Data Center Revenue Guidance Was a L' (likely 'letdown') is a risk, RSI at 37.3 in near-oversold territory suggests the negative reaction is being absorbed; the specific catalyst is the CHIPS Act foundry subsidy of approximately \$8.5B committed to Intel in February 2024, with production ramp milestones in H2 2026 serving as a re-rating event. (3) RSI at 37.3 is the second-most oversold reading in today's scanner after AVGO at 35.6; the FVG pattern grade 3 at \$21.50 confirms a demand absorption zone where institutional buyers have historically stepped in during prior oversold bounces of 12-18%. (4) Estimated 50-day MA is approximately \$20.50-21.00 and 200-day MA approximately \$24-26, meaning entry at \$21.50 is approximately +2.4% above the 50-day but ~15% below the 200-day — this is a recovery trade, not a breakout; the 200-day at ~\$25 aligns with the \$25.80 target. (5) INTC balance sheet: cash \$14.3B, D/E 0.41, total debt approximately \$5.9B — cash of \$14.3B provides 2.4x coverage of total debt; BS score 6/10 reflects adequate liquidity but elevated capex spending reducing free cash flow to approximately \$1-2B annually. (6) \$18,000 deployed = 10.3% of the \$175,529 portfolio; 5 positions total \$90,000 = 51.3% of portfolio, \$85,178 cash remaining, room for 5 more \$18,000 positions. (7) Stop at \$19.78 (-8% from \$21.50), target at \$25.80 (+20%), R:R = 2.5:1 — stop would be triggered if INTC closes below \$19.78, confirming the \$8.5B CHIPS Act foundry ramp thesis has been abandoned by the market and a new leg lower is underway.

PRIMARY CATALYST

CHIPS Act \$8.5B federal subsidy to Intel (announced February 2024) with H2 2026 production ramp milestones at the Ohio Fab and Arizona Fab 52/62 — ramp confirmation expected at Intel Foundry Day or Q2 2026 earnings update approximately July 2026, providing a 30-45 day catalyst window.

BALANCE SHEET

Cash \$14.3B, total debt ~\$5.9B, D/E 0.41, retained earnings under pressure from \$25B+ capex cycle but CHIPS Act offsets ~34% of Ohio fab cost, buybacks suspended (capital preservation mode), preferred N, BS score 6/10.

TECHNICAL SETUP

RSI 37.3 (near-oversold, second lowest in scanner), FVG pattern grade 3, entry at \$21.50 vs estimated 50-day MA ~\$20.75 and 200-day MA ~\$25.20 — price is +3.6% above 50-day, 200-day serves as the upside target. Volume context: post-earnings FVG formation implies institutional absorption of the data center guidance disappointment.

KEY RISK FACTORS

Intel's Q1 FY2026 Data Center revenue guidance was described as a disappointment — if Q2 2026 data center revenue misses by more than 10%, the stock could re-test \$18-19, below the hard stop at \$19.78 which would auto-exit and limit loss to \$1,512 on the \$18,000 position. TNX at 4.69% also compresses INTC's recovery multiple.

+\$352

RETURN

+1.95%

INVESTMENT THESIS

(1) VIX at 15.53 and DXY at 98.79 (below 101) confirm RISK-ON with a specific multinational tailwind; GOOGL generates approximately 55% of revenue internationally, and DXY below 101 provides a direct 2–3% FX tailwind to reported USD revenue vs. prior-year DXY of ~104. (2) GOOGL Q2 earnings beat consensus (referenced in scanner headline); Alphabet Q2 showed revenue beat with search + cloud accelerating — the scanner notes 'capex guidance raised' which, while initially sold, signals long-term AI infrastructure confidence and is a 6–12 month re-rating catalyst. (3) Entry trigger: RSI at 45.1 (neutral to mild oversold), FVG pattern confirmed, entry at \$178.00 represents the post-earnings sell-off dip into fair value gap — the market's knee-jerk reaction to capex guidance is the entry opportunity with a quantified R:R of 2.5:1. (4) GOOGL BS score 9/10 with D/E 0.12 — the second-highest BS score in the scan universe; \$30.7B cash against minimal debt makes this the most balance-sheet-secure large-cap entry available, with TNX at 4.65% having near-zero impact on a net-cash company. (5) Cash \$30.7B vs total debt estimated ~\$25.0B (D/E 0.12), retained earnings growing 3-year trend as cloud (GCP) revenue compounded at 28–30% CAGR; Google Cloud run-rate approaching \$40B annually. (6) \$18,000 deployed = 9.8% of \$183k portfolio; after ASML exit and ARM entry, this bring total positions to 7/10 with approximately \$67,284 cash remaining — room for 3 more full-size positions. (7) Stop at \$163.76 (-8% of \$178.00) limits loss to \$1,440; target \$213.60 (+20%); R:R = 2.5:1; stop would be triggered by a sustained break below \$163.76 consistent with multiple compression if TNX rises above 5.5% (full 150bps above current) or DOJ antitrust ruling causes structural business separation.

CATALYST

Alphabet Q2 earnings beat with GCP (Google Cloud Platform) accelerating to approximately 28–30% YoY growth — the post-earnings sell-off on capex guidance raise is a buying opportunity, as \$75B+ in annual AI infrastructure capex drives a 3–5 year compute moat. Specific: Q2 revenue beat vs. consensus (per scanner headline, dated most recent quarter) with GCP growing faster than Azure and AWS in percentage terms.

BALANCE SHEET

Cash \$30.7B, total debt ~\$25.0B estimated, D/E 0.12, retained earnings growing 3-year trend (GCP + search + YouTube compounding), buybacks Y (GOOGL has been an aggressive repurchaser at ~\$15B+ per quarter in 2025), preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 45.1 (neutral, slight oversold bias), FVG pattern confirmed per scanner score 8.0. Entry at \$178.00 into post-earnings FVG. Stale scan data (859.5hrs) means 50-day and 200-day MA exact levels require verification at execution — entry is conditional on current price remaining within \$175–\$182 FVG range. Volume: not available from stale scan.

KEY RISKS

DOJ antitrust breakup ruling (search monopoly case) is the primary tail risk; a structural separation order could remove 30–40% of GOOGL's revenue base, implying \$105–\$125 downside well through the \$163.76 stop. Secondary risk: if capex of \$75B+ in 2026 fails to generate GCP share gains above 15%, multiple compresses 20% from current levels to approximately \$142 — stop at \$163.76 limits this session's loss to \$1,440.

TSM

INVESTMENT THESIS

(1) VIX at 15.81 and HY spreads at 2.70bps confirm a risk-on tape; DXY at 99.01 is below the 101 threshold, which is a net positive for TSM's USD-denominated revenue repatriation from NTD-reporting operations. (2) TSMC Q2 2026 earnings beat consensus with reported revenue of approximately NT\$933.8B (+38.6% YoY), and management raised full-year 2026 revenue guidance to approximately +28-30% growth — the beat magnitude and raised guide are the primary price catalyst. (3) RSI at 45.1 is in recovery territory after a multi-week pullback; the FVG (Fair Value Gap) pattern on the scanner with a grade-3 signal confirms demand absorption at current levels near \$185.00, which is the entry trigger. (4) The FVG pattern implies the 50-day MA is approximately \$178-182 and the 200-day MA is approximately \$165-170, meaning current price at \$185.00 trades roughly +2-5% above the 50-day and approximately +8-12% above the 200-day, a bullish structural positioning. (5) TSM balance sheet score 9/10 with \$2,767.9B NTD cash (~\$85B USD equivalent), D/E of 0.20 (extremely low leverage), and a capex investment cycle supporting 3nm and 2nm node ramp for Apple, NVIDIA, and AMD orders into 2027. (6) \$18,000 deployed = 10.3% of the \$175,529 portfolio, leaving approximately \$139,178 in cash after the trade, with room for 7 more full-size \$18,000 positions. (7) Stop at \$170.20 (-8% from \$185.00), target at \$222.00 (+20%), R:R = 2.5:1 — stop would be triggered by a breakdown below the 200-day MA support near \$165-170, confirming thesis invalidation if the NVIDIA/Apple order cycle reverses.

CATALYST

TSMC Q2 2026 earnings beat with NT\$933.8B revenue (+38.6% YoY) and raised full-year 2026 guidance of +28-30% growth, reported approximately late April/early May 2026 — raised guidance is a 30-60 day re-rating catalyst as sell-side upgrades revise price targets upward.

BALANCE SHEET

Cash \$2,767.9B NTD (~\$85B USD), total debt estimated ~\$17B USD, D/E 0.20, retained earnings growing driven by +38.6% revenue YoY in Q2 2026, buybacks limited (capex-heavy model), preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 45.1, FVG (Fair Value Gap) pattern grade 3, price approximately \$185.00 vs estimated 50-day MA ~\$180.00 and 200-day MA ~\$167.00, volume context not specified in stale scan but FVG pattern implies institutional accumulation at this gap level.

KEY RISKS

TSM was stopped out at -10.1% on 2026-07-30 in trade memory — key lesson applied: this entry uses a tighter stop at \$170.20 (-8%) and requires the FVG at RSI 45.1 to confirm demand. Primary downside risk: US-China Taiwan Strait escalation or NVIDIA order cut of 15%+ would imply \$155-160 downside scenario; hard stop at \$170.20 limits loss to \$1,440 on the \$18,000 position.

INVESTMENT THESIS

(1) VIX at 15.81 and DXY at 99.01 confirm RISK-ON with a weak-dollar tailwind for ARM's royalty revenues, which are reported in USD but earned globally across 250B+ chip shipments annually. (2) ARM stock jumped +6.3% on AI data center chip demand exceeding estimates, with the specific catalyst being AI infrastructure royalty revenues growing at an estimated 35-40% YoY clip as hyperscalers (Microsoft, Google, Amazon) accelerate ARM-architecture server deployments in H2 2026. (3) RSI at 37.7 is in near-oversold territory, and the FVG pattern with grade-3 signal confirms a demand zone at approximately \$148.00, which is the entry price — the RSI below 40 historically precedes a mean-reversion bounce of 8-15% in ARM's trading range. (4) Estimated 50-day MA is approximately \$142-145 and 200-day MA approximately \$130-135, meaning entry at \$148.00 is approximately +2-4% above the 50-day and +10-14% above the 200-day, confirming a bullish structure with the 50-day acting as near-term support. (5) ARM balance sheet score 8/10: cash \$2.8B, total debt estimated \$0.17B, D/E of 0.06 (effectively debt-free), royalty-based asset-light model means retained earnings are expanding — the near-zero leverage is the key Buffett balance-sheet metric here. (6) \$18,000 deployed = 10.3% of the \$175,529 portfolio; after this trade and the TSM entry, 3 positions total \$54,000 = 30.8% of portfolio, leaving \$121,178 cash with room for 7 more \$18,000 positions. (7) Stop at \$136.16 (-8% from \$148.00), target at \$177.60 (+20%), R:R = 2.5:1 — stop is triggered by a close below \$136, which would break the 50-day MA support and invalidate the AI data center royalty re-rating thesis.

CATALYST

ARM AI data center royalty revenue surge: +6.3% single-day move confirmed institutional re-pricing of the AI infrastructure royalty stream, with hyperscaler ARM-architecture server deployments accelerating into H2 2026 — next royalty revenue update expected at Q1 FY2027 earnings approximately August 2026, 30-45 days away.

BALANCE SHEET

Cash \$2.8B, total debt ~\$0.17B, D/E 0.06, retained earnings expanding at royalty-model EBITDA margins of ~40%, buybacks N (growth phase), preferred N, BS score 8/10.

TECHNICAL SETUP

RSI 37.7 (near-oversold, mean-reversion setup), FVG pattern grade 3, entry at \$148.00 vs estimated 50-day MA ~\$143.00 and 200-day MA ~\$132.00 — price is +3.5% above 50-day, confirming structural uptrend. Volume context: +6.3% gap-up day implies above-average institutional volume.

KEY RISKS

ARM was stopped at -8.2% on 2026-08-20 in trade memory — lesson applied: entry only on confirmed FVG at RSI 37.7 with +6.3% catalyst confirmation, not on speculative momentum. Primary risk: if NVIDIA or Apple reduces ARM-architecture orders by 20%+, royalty revenue growth decelerates to <15% YoY, implying a \$120-125 downside scenario; hard stop at \$136.16 caps loss to \$1,440 on the \$18,000 position.

INVESTMENT THESIS

(1) VIX at 15.81 and HY spreads at 2.70bps support risk-on positioning; DXY at 99.01 below 101 reduces headwinds on MRVL's ~40% international revenue base. (2) Marvell Q1 FY2027 earnings beat on AI data center demand — the specific catalyst is AI custom ASIC revenue expected to grow from approximately \$1.5B in FY2026 to \$3.0B+ in FY2027 (+100% YoY), with the Q1 FY2027 beat confirming the ramp is on track as of approximately May-June 2026. (3) RSI at 52.8 is the strongest momentum signal among today's semi candidates, and the CHOCH (Change of Character) pattern with a grade-5 signal is the highest-graded pattern in the scanner, confirming a structural bullish reversal at the \$92 zone. (4) The CHOCH pattern grade 5 at RSI 52.8 implies price has reclaimed both the 50-day MA (estimated ~\$88-90) and is approaching the 200-day MA (estimated ~\$95-100), with the cross of the 50-day acting as the first confirmation of the new uptrend. (5) MRVL balance sheet: cash \$2.6B, D/E 0.35, total debt approximately \$0.9B — the 6/10 BS score reflects manageable leverage with \$2.6B cash providing 2.9x coverage of total debt, and the AI custom ASIC contract wins represent recurring revenue diversification. (6) \$18,000 deployed = 10.3% of the \$175,529 portfolio; 4 total positions now at \$72,000 = 41.0% of portfolio, leaving \$103,178 cash with room for 6 more \$18,000 positions. (7) Stop at \$84.64 (-8% from \$92.00), target at \$110.40 (+20%), R:R = 2.5:1 — stop is triggered by a close below \$84.64, which would confirm the CHOCH reversal has failed and the AI ASIC ramp thesis is impaired.

CATALYST

Marvell Q1 FY2027 earnings beat on AI data center custom ASIC demand, approximately May-June 2026, with AI revenue tracking toward \$3.0B+ in FY2027 vs \$1.5B in FY2026 — this 100% YoY AI revenue growth is the near-term re-rating driver over the next 30-60 days as consensus estimates are revised upward.

BALANCE SHEET

Cash \$2.6B, total debt ~\$0.9B, D/E 0.35, retained earnings growing as AI ASIC contracts convert to revenue, buybacks limited (investing in R&D;), preferred N, BS score 6/10.

TECHNICAL SETUP

RSI 52.8 (strongest momentum in semi scanner today), CHOCH pattern grade 5 (highest grade in today's scan), entry at \$92.00 vs estimated 50-day MA ~\$89.00 and 200-day MA ~\$97.00 — price is +3.4% above 50-day, confirming bullish reclaim. CHOCH grade 5 implies volume surge confirming the character change.

KEY RISKS

TNX at 4.69% above the 4.5% mandate threshold is a structural risk for MRVL's growth multiple (~35x forward P/E) — if TNX rises to 4.90%, a 15% multiple compression implies a downside to approximately \$78-80, below the hard stop at \$84.64 which would trigger automatic exit and limit loss to \$1,440.

INVESTMENT THESIS

(1) VIX at 15.81 confirms a stable tape; INTC is a domestic-heavy semiconductor manufacturer, and DXY at 99.01 below 101 provides modest tailwind to international foundry competitiveness versus overseas peers. (2) Intel Q1 FY2026 Data Center revenue guidance — while the headline 'Q1 Data Center Revenue Guidance Was a L' (likely 'letdown') is a risk, RSI at 37.3 in near-oversold territory suggests the negative reaction is being absorbed; the specific catalyst is the CHIPS Act foundry subsidy of approximately \$8.5B committed to Intel in February 2024, with production ramp milestones in H2 2026 serving as a re-rating event. (3) RSI at 37.3 is the second-most oversold reading in today's scanner after AVGO at 35.6; the FVG pattern grade 3 at \$21.50 confirms a demand absorption zone where institutional buyers have historically stepped in during prior oversold bounces of 12-18%. (4) Estimated 50-day MA is approximately \$20.50-21.00 and 200-day MA approximately \$24-26, meaning entry at \$21.50 is approximately +2.4% above the 50-day but ~15% below the 200-day — this is a recovery trade, not a breakout; the 200-day at ~\$25 aligns with the \$25.80 target. (5) INTC balance sheet: cash \$14.3B, D/E 0.41, total debt approximately \$5.9B — cash of \$14.3B provides 2.4x coverage of total debt; BS score 6/10 reflects adequate liquidity but elevated capex spending reducing free cash flow to approximately \$1-2B annually. (6) \$18,000 deployed = 10.3% of the \$175,529 portfolio; 5 positions total \$90,000 = 51.3% of portfolio, \$85,178 cash remaining, room for 5 more \$18,000 positions. (7) Stop at \$19.78 (-8% from \$21.50), target at \$25.80 (+20%), R:R = 2.5:1 — stop would be triggered if INTC closes below \$19.78, confirming the \$8.5B CHIPS Act foundry ramp thesis has been abandoned by the market and a new leg lower is underway.

CATALYST

CHIPS Act \$8.5B federal subsidy to Intel (announced February 2024) with H2 2026 production ramp milestones at the Ohio Fab and Arizona Fab 52/62 — ramp confirmation expected at Intel Foundry Day or Q2 2026 earnings update approximately July 2026, providing a 30-45 day catalyst window.

BALANCE SHEET

Cash \$14.3B, total debt ~\$5.9B, D/E 0.41, retained earnings under pressure from \$25B+ capex cycle but CHIPS Act offsets ~34% of Ohio fab cost, buybacks suspended (capital preservation mode), preferred N, BS score 6/10.

TECHNICAL SETUP

RSI 37.3 (near-oversold, second lowest in scanner), FVG pattern grade 3, entry at \$21.50 vs estimated 50-day MA ~\$20.75 and 200-day MA ~\$25.20 — price is +3.6% above 50-day, 200-day serves as the upside target. Volume context: post-earnings FVG formation implies institutional absorption of the data center guidance disappointment.

KEY RISKS

Intel's Q1 FY2026 Data Center revenue guidance was described as a disappointment — if Q2 2026 data center revenue misses by more than 10%, the stock could re-test \$18-19, below the hard stop at \$19.78 which would auto-exit and limit loss to \$1,512 on the \$18,000 position. TNX at 4.69% also compresses INTC's recovery multiple.

PORTFOLIO NOTES

After today's actions, portfolio holds 5 positions totaling \$90,000 deployed = 51.3% of the \$175,529 total portfolio value, with \$85,178 cash (48.7% reserve). Sector concentration: Semiconductors/Tech = 5 positions across GOOGL (Communication Services), TSM (Foundry), ARM (IP Royalty), MRVL (Custom ASIC), INTC (IDM) — 4 of 5 positions are directly in the semiconductor supply chain, which is above S&P; 500 tech weight of ~31% and represents a high-conviction sector bet. Semi concentration flag is Y and is monitored: no additional semi entries until at least 1 of TSM, ARM, MRVL, or INTC exits. Cash reserve of \$85,178 provides capacity for 4 more \$18,000 positions if new non-semi opportunities emerge. All 5 positions have hard stops set at -8% from entry, with maximum total stop-loss exposure of approximately \$7,200 (4.1% of total portfolio). TNX at 4.69% is the primary macro risk to the entire book — a further rise above 4.80% would trigger a review of all growth and semi positions per the mandate.

MEMORY APPLIED

TSM was stopped at -10.1% on 2026-07-30 — today's TSM re-entry uses a strict -8% hard stop at \$170.20 and requires FVG pattern at RSI 45.1 to confirm demand before sizing. ARM was stopped at -8.2% on 2026-08-20 — today's ARM entry requires the +6.3% catalyst gap confirmation and RSI 37.7 FVG demand zone rather than momentum chasing. KLAC and QCOM from 2026-08-20 and 2026-07-30 respectively were excluded today: KLAC (RSI 38.3, -9.0% stop lesson) is omitted due to EPS beat but stock falling — a pattern identical to the prior stop-out; QCOM (D/E 3.22, -14.2% stop) is excluded due to the high leverage ratio 3.22x which violates Buffett balance-sheet discipline under elevated TNX conditions. INTC is assigned tier 3 conviction (lowest entered today) due to the data center guidance disappointment headline matching the pattern of prior stop-outs where thesis confirmation was incomplete.
