Market Assessment

RISK-ON regime confirmed with VIX subdued at 18.6, a positive 10Y-2Y curve at +0.30%, and exceptionally tight HY spreads signaling healthy credit conditions. Semiconductor and AI infrastructure complex shows broad strength across the scanner, but the portfolio is already maximally exposed to this theme with 6/6 positions concentrated in semis/megacap tech. No capacity to add without exiting, and several positions are sitting on unrealized losses requiring discipline.

REGIME: RISK-ON

Notes: Portfolio is at 6/6 positions and heavily concentrated in the semiconductor/AI infrastructure complex (AVGO, TSM, KLAC, CLOU, MSFT, GOOGL). Despite an extremely strong scanner full of semis STRONG BUYS (NVDA, SMH, SOXX, AMAT, ASML), no new entries are possible without freeing a slot, and adding more semis would worsen single-theme concentration risk. No position has broken thesis or hit a stop/target, so the disciplined action is to HOLD all and let the framework's stops and take-profits manage outcomes. AVGO and GOOGL are the two to watch — both within ~1.5-2% of their -8% stops.

Memory applied: No prior trade history exists, so decisions rest on framework rules: avoid momentum-chasing by refusing to swap losers for hot scanner names mid-trend, respect sector-overlap limits given existing semis saturation, and enforce stop/take-profit discipline rather than averaging down into red positions like AVGO and GOOGL.
