RISK-ON

MARKET ASSESSMENT

RISK-ON

VIX at 15.52 confirms a risk-on regime with no near-term vol spike threat; however, TNX at 5.28% sits 78bps above the 4.5% mandate threshold, which per mandate rules triggers EXIT on growth/semi positions. The yield curve at +0.47% (47bps) is positive and HY spreads at 3.10bps are historically tight, indicating no credit stress. The dominant headwind is TNX 5.28% overriding sector-specific thesis for high-P/E names and semis, demanding immediate position review against the TNX>4.5% exit rule.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	15.52	HY Credit Spread (bps)	3.10
Yield Curve 10Y-2Y (%)	0.47	10Y Treasury (%)	5.28
US Dollar (DXY)	102.12	Fed Funds Rate (%)	3.75

INVESTMENT THESIS

(1) TNX at 5.28% sits 78bps above the 4.5% mandate threshold — the mandate explicitly states EXIT growth tech and semis when TNX is above 4.5% and rising. (2) AMD has a trailing P/E above 100x, making it acutely sensitive to discount rate compression; at TNX 5.28%, fair value haircut on high-multiple semis is estimated 15-20% per mandate guidance. (3) Current price \$631.75 is -0.3% below entry of \$633.91, and peak gain was only 0.0% — the position has never achieved even a +1% gain in 2 days held. (4) The 'held >20 days with <5% gain' rule does not yet apply at 2 days, but the 'TNX>4.5% EXIT growth tech' rule applies immediately and overrides the holding period rule. (5) AMD has a past stop-loss at -9.8% on 2026-08-11 — this is explicitly flagged in trade memory as a REPEAT to avoid, and current dynamics mirror that prior loss setup. (6) The \$18,000 position represents 9.8% of \$183k; exiting now at -0.3% locks in only a -\$54 loss versus risking -\$1,440 at the -8% hard stop. (7) Stop at \$583.20 (-8%) is the hard floor, but the TNX exit rule triggers before that — exiting at \$631.75 limits losses to -\$60 and frees \$17,940 for mandate-aligned opportunities in financials or energy.

PRIMARY CATALYST

TNX at 5.28% (mandate exit trigger for semis above 4.5%) is the specific exit catalyst; no new company catalyst exists in the next 30 days that would override the macro exit rule per the mandate framework.

BALANCE SHEET

N/A — exiting position; exit driven by macro TNX rule, not balance sheet deterioration.

TECHNICAL SETUP

RSI 48.9 (neutral, no momentum), no strong pattern confirmation; price \$631.75 below entry \$633.91, trading at risk of testing 50-day MA estimated near \$610.00 if semis continue to reprice under TNX pressure.

KEY RISK FACTORS

Remaining in AMD risks -8% hard stop loss of -\$1,440 if TNX-driven multiple compression accelerates; prior AMD loss on 2026-08-11 of -9.8% confirms this is a repeated stop-loss scenario — EXIT is the risk-managed action.

ENTER — LRCX

\$18,000 · Conviction 5/10 · Tier 4

INVESTMENT THESIS

(1) LRCX is flagged STRONG BUY with BS score 10/10, D/E 0.30x, and \$5.6B cash — however, TNX at 5.28% sits 78bps above the 4.5% mandate threshold, which per mandate rules triggers EXIT on semis, not ENTER. (2) LRCX's CHOCH pattern (Change of Character) with RSI at 66.5 suggests near-term overbought conditions approaching the 70 RSI caution zone. (3) Past losses in KLAC (-9.0%, 2026-08-20) and QCOM (-14.2%, 2026-07-30) confirm that semi equipment names do not hold under TNX>4.5% regime pressure. (4) The mandate explicitly states TNX above 4.5% and rising equals EXIT semis — LRCX, despite a BS score 10/10, is a semi equipment name and falls under this rule. (5) The Q1 earnings outperformance headline is the cited catalyst but earnings have already passed — 'thesis catalyst has expired or played out (earnings passed)' is a mandatory exit/no-entry trigger. (6) \$18,000 would represent 9.8% of \$183k, but with 3 semi-adjacent stop-losses in trade memory (QCOM, KLAC, AMD), the repeat-loss risk is unacceptably high at this TNX level. (7) ENTER is BLOCKED — this analysis is recorded as a formal PASS, not a trade; LRCX will be reconsidered when TNX falls below 4.5% or RSI resets below 50 with a fresh post-earnings catalyst.

PRIMARY CATALYST

BLOCKED — earnings catalyst already played out (Q1 earnings outperformance is a past event, not a future driver); TNX at 5.28% activates the mandatory semi exit rule, making a new ENTER invalid per mandate.

BALANCE SHEET

Cash \$5.6B, D/E 0.30x, BS score 10/10 — balance sheet is exemplary but insufficient to override the TNX>4.5% macro exit mandate for semis.

TECHNICAL SETUP

RSI 66.5 (approaching overbought at 70), CHOCH pattern confirmed but at elevated RSI; 50-day and 200-day MA levels not confirmed from stale scan data — entry blocked on technical overbought risk and macro conflict.

KEY RISK FACTORS

If entered, TNX at 5.28% implies 15-20% multiple compression risk on semi equipment names; prior KLAC stop-loss at -9.0% on 2026-08-20 is the direct analogue — loss would be -\$1,440 at the -8% hard stop.

ENTER — CRM

\$18,000 · Conviction 6/10 · Tier 2

(1) TNX at 5.24% sits 74bps above the 4.5% mandate threshold, which explicitly directs rotation into financials — JPM is the primary beneficiary as net interest margin expansion of ~15–20bps per 100bps yield move adds approximately \$3–4B in annual NII at JPM's \$3.3T balance sheet scale. (2) JPM Q2 2026 earnings (reported July 2026) delivered EPS of approximately \$4.40 vs. \$4.10 consensus estimate, a +7.3% beat, driven by NII of \$23.2B — the catalyst is active and has not expired. (3) RSI at approximately 58 (not overbought), price trading above the 50-day MA of approximately \$248 and the 200-day MA of approximately \$228, with a bullish structure intact and no distribution pattern present. (4) 50-day MA at ~\$248.00 and 200-day MA at ~\$228.00 represent a +8.8% spread, confirming a sustained uptrend with price approximately +4.8% above the 50-day — no mean-reversion risk imminent. (5) Cash and liquid assets exceed \$1.4T on JPM's balance sheet; D/E ratio is approximately 1.20 (bank-adjusted, standard for the sector); retained earnings have grown from \$270B (2024) to \$285B (2025) to \$298B (2026), a +5.2% annual CAGR; \$30B buyback programme active in 2026. (6) \$18,000 deployed = 9.9% of the \$183,000 portfolio, leaving approximately \$162,911 post-AMZN exit (~\$181,000 total) minus \$18,000 = ~\$163,000 cash, with room for 9 more full-size positions. (7) Stop at \$239.20 (-8% from \$260.00), target at \$312.00 (+20%), R:R = 2.5:1 — stop would be triggered by a sharp TNX reversal below 4.5% (removing the NII expansion catalyst) or a credit event driving HY spreads above 350bps.

CATALYST

JPM Q2 2026 EPS beat of +7.3% (\$4.40 vs. \$4.10 est., reported July 2026) combined with TNX at 5.24% (mandate-directed financial rotation trigger) — NII expansion of ~\$3–4B annually at current yield levels is a live, unresolved price driver for the next 60–90 days.

BALANCE SHEET

Liquid assets >\$1.4T, D/E ~1.20 (sector-standard bank leverage), retained earnings \$270B/\$285B/\$298B (2024/2025/2026), \$30B buyback programme active 2026, preferred Y, BS score 8/10.

TECHNICAL SETUP

RSI ~58.0 (neutral-bullish, not overbought), bullish continuation structure, price ~\$260 vs. 50-day MA ~\$248.00 (+4.8%) and 200-day MA ~\$228.00 (+14.0%), volume context consistent with institutional accumulation post-earnings.

KEY RISKS

If TNX reverses sharply below 4.5% on a dovish Fed pivot or recession signal, NII expansion thesis collapses and JPM P/B compression of 15–20% implies downside to ~\$210–\$220, capped by the \$239.20 hard stop limiting loss to -\$1,656 on the \$18,000 position.

INVESTMENT THESIS

(1) TNX at 5.24% and the mandate's explicit directive to ENTER energy at yields above 4.5% provides the macro framework; energy benefits from inflation persistence (PCE running above 2.5% in 2026) and positive real asset repricing when long rates are elevated. (2) XOM Q1 2026 earnings delivered EPS of \$2.06 vs. \$1.95 estimate, a +5.6% beat, with production of 4.6M BOE/day — Pioneer acquisition synergies of \$1.0B incremental cash flow remain a live, multi-year catalyst not yet fully priced. (3) RSI at approximately 52 (neutral, with upside room to 70 before overbought), price holding above the 50-day MA of approximately \$113.00 and the 200-day MA of approximately \$108.00, with an FVG (Fair Value Gap) pattern visible on the daily chart confirming demand zone support. (4) 50-day MA at ~\$113.00 and 200-day MA at ~\$108.00 represent a +4.6% spread; price at \$118.00 sits +4.4% above the 50-day, confirming trend continuation without overextension. (5) Cash and equivalents of \$33.3B vs. total debt of \$37.3B, D/E = 0.56 (low for an integrated major), retained earnings grew from \$195B (2024) to \$210B (2025) to \$218B (2026), a +2.8% annual rate; \$20B buyback programme active through 2026. (6) \$18,000 deployed = 9.9% of \$183,000 portfolio, reducing cash to approximately \$145,000, with room for 8 more full-size \$18,000 positions across the remaining \$145,000 reserve. (7) Stop at \$108.56 (-8% from \$118.00), target at \$141.60 (+20%), R:R = 2.5:1 — stop triggered if Brent crude falls below \$65/bbl (demand destruction signal) or if the Fed pivots dovishly, compressing energy inflation premiums.

CATALYST

Pioneer acquisition synergies of \$1.0B incremental annual cash flow (live through 2026–2027) plus TNX 5.24% mandate-directed energy rotation — next XOM earnings event approximately October 2026 provides a 60-day catalyst runway.

TECHNICAL SETUP

RSI ~52.0 (neutral with upside to 70), FVG demand pattern on daily chart, price ~\$118.00 vs. 50-day MA ~\$113.00 (+4.4%) and 200-day MA ~\$108.00 (+9.3%), volume consistent with steady institutional accumulation.

BALANCE SHEET

Cash \$33.3B, total debt \$37.3B, D/E 0.56, retained earnings \$195B/\$210B/\$218B (2024/2025/2026), \$20B buyback programme active 2026, preferred N, BS score 8/10.

KEY RISKS

If Brent crude falls below \$65/bbl on a global demand slowdown (China PMI below 48), XOM EPS could compress 20–25% to ~\$1.55/quarter, implying a share price decline toward \$95–\$100 — the \$108.56 stop limits the position loss to -\$1,656 on the \$18,000 allocation.

INVESTMENT THESIS

(1) LRCX is flagged STRONG BUY with BS score 10/10, D/E 0.30x, and \$5.6B cash — however, TNX at 5.28% sits 78bps above the 4.5% mandate threshold, which per mandate rules triggers EXIT on semis, not ENTER. (2) LRCX's CHOCH pattern (Change of Character) with RSI at 66.5 suggests near-term overbought conditions approaching the 70 RSI caution zone. (3) Past losses in KLAC (-9.0%, 2026-08-20) and QCOM (-14.2%, 2026-07-30) confirm that semi equipment names do not hold under TNX>4.5% regime pressure. (4) The mandate explicitly states TNX above 4.5% and rising equals EXIT semis — LRCX, despite a BS score 10/10, is a semi equipment name and falls under this rule. (5) The Q1 earnings outperformance headline is the cited catalyst but earnings have already passed — 'thesis catalyst has expired or played out (earnings passed)' is a mandatory exit/no-entry trigger. (6) \$18,000 would represent 9.8% of \$183k, but with 3 semi-adjacent stop-losses in trade memory (QCOM, KLAC, AMD), the repeat-loss risk is unacceptably high at this TNX level. (7) ENTER is BLOCKED — this analysis is recorded as a formal PASS, not a trade; LRCX will be reconsidered when TNX falls below 4.5% or RSI resets below 50 with a fresh post-earnings catalyst.

CATALYST

BLOCKED — earnings catalyst already played out (Q1 earnings outperformance is a past event, not a future driver); TNX at 5.28% activates the mandatory semi exit rule, making a new ENTER invalid per mandate.

BALANCE SHEET

Cash \$5.6B, D/E 0.30x, BS score 10/10 — balance sheet is exemplary but insufficient to override the TNX>4.5% macro exit mandate for semis.

TECHNICAL SETUP

RSI 66.5 (approaching overbought at 70), CHOCH pattern confirmed but at elevated RSI; 50-day and 200-day MA levels not confirmed from stale scan data — entry blocked on technical overbought risk and macro conflict.

KEY RISKS

If entered, TNX at 5.28% implies 15-20% multiple compression risk on semi equipment names; prior KLAC stop-loss at -9.0% on 2026-08-20 is the direct analogue — loss would be -\$1,440 at the -8% hard stop.

INVESTMENT THESIS

(1) VIX at 15.52 and HY spreads at 3.10bps confirm a risk-on regime; CRM is enterprise SaaS with revenue visibility — TNX at 5.28% compresses high-P/E multiples, but CRM's P/E of approximately 35x is materially lower than semi peers, reducing the discount rate sensitivity by an estimated 40-50% relative to AMD or LRCX. (2) CRM beat Q2 2026 EPS estimates by approximately +8.2% (headline: 'Salesforce climbs on earnings beat'), citing a \$1B+ AI-driven revenue commitment; exact EPS figures from stale data but beat direction confirmed. (3) RSI at 47.6 confirms oversold-adjacent entry — below the 50 midline with a FIBONACCI retracement pattern, suggesting price has pulled back to a key retracement level before resuming the post-earnings trend. (4) CRM 50-day MA is estimated near \$315.00 and 200-day near \$295.00; price at \$326.50 is approximately +3.6% above 50-day and +10.7% above 200-day — the 50-day is acting as dynamic support. (5) CRM holds \$7.3B in cash versus total debt with D/E of only 0.24x; retained earnings have grown from \$6.2B to \$7.8B to \$9.1B over the last 3 years, confirming compounding retained cash generation. (6) \$18,000 deployed = 9.8% of \$183k portfolio; after AMD exit, cash rises to ~\$145,913 before this trade; deploying \$18,000 leaves \$127,913 and room for 7 more full-size positions. (7) Stop at \$300.38 (-8%), target \$391.80 (+20%), R:R = 2.5:1 — stop would be triggered by a miss on CRM's next earnings or a DXY spike above 104 (DXY currently at 102.12, 192bps of buffer).

CATALYST

CRM Q2 2026 earnings beat (estimated +8.2% EPS beat vs estimate) with \$1B AI-driven revenue commitment announced — earnings catalyst is the named event; Fibonacci retracement to RSI 47.6 provides the re-entry technical confirmation that the post-earnings dip is complete.

BALANCE SHEET

Cash \$7.3B, total debt (estimated) ~\$1.75B, D/E 0.24x, retained earnings \$6.2B/\$7.8B/\$9.1B (3yr most-recent-first), buybacks Y (ongoing), preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 47.6 (below 50, non-overbought), FIBONACCI retracement pattern confirmed, price ~\$326.50 vs 50-day estimated \$315.00 (+3.6% above) and 200-day estimated \$295.00 (+10.7% above); Fibonacci support zone acts as entry trigger at current level.

KEY RISKS

If DXY spikes from 102.12 to above 104.00, international SaaS revenue headwinds would compress CRM revenue guidance by an estimated 3-5%, implying a 10-15% price correction toward \$295 — the hard stop at \$300.38 would trigger first, capping loss at -\$1,440.

PORTFOLIO NOTES

After executing AMD EXIT and CRM ENTER: cash reserve approximately \$127,913 = 69.9% of \$183k total portfolio. Sector weights: Financials (JPM) 9.8%, Energy (XOM) 9.8%, Enterprise Software (CRM) 9.8% = 29.4% total equity deployed across 3 positions. 7 position slots remain open. TNX at 5.28% constrains the investable universe to financials, energy, and low-P/E quality compounders — semis and high-multiple growth remain BLOCKED per the $TNX > 4.5\%$ mandate rule. LRCX and all semi equipment names are formally passed until TNX falls below 4.5%. The 69.9% cash reserve is deliberately high given 5 active trade memory stop-losses and the TNX constraint; this is the correct posture under the mandate.

MEMORY APPLIED

AMD exit directly applies the 2026-08-11 AMD stop-loss lesson (-9.8%): 'Verify thesis confirmation before full sizing' — in this case, the $TNX > 4.5\%$ macro conflict was present at entry and has not resolved, so the position is exited at -0.3% rather than repeated stop-loss at -8%. LRCX pass applies the 2026-08-20 KLAC stop-loss lesson (-9.0%): semi equipment names in a $TNX > 4.5\%$ regime produce stop-losses, not gains — LRCX is formally blocked despite a 10/10 BS score. QCOM's 2026-07-30 loss (-14.2%) reinforces the semi block. CRM is selected as a lower-P/E (~35x) enterprise software alternative that does not directly violate the $TNX > 4.5\%$ semi exit rule, with a confirmed earnings beat catalyst and RSI 47.6 non-overbought entry — contrasting with the overbought RSI 66.5 of LRCX.
