RISK-ON

MARKET ASSESSMENT

RISK-ON

VIX at 15.18 confirms calm risk-on regime; yield curve at +50bps (10Y-2Y) signals no imminent recession; HY credit spreads at 2.75bps are near cycle tightts, indicating zero credit stress. However, TNX at 4.65% sits above the 4.5% threshold flagged in the mandate, which structurally pressures high-P/E growth and semis — this is a key tension in the current book. DXY at 98.83 (well below 101) is a tailwind for multinationals and exporters, supporting GOOGL, AVGO, and ARM.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	15.18	HY Credit Spread (bps)	2.75
Yield Curve 10Y-2Y (%)	0.50	10Y Treasury (%)	4.65
US Dollar (DXY)	98.83	Fed Funds Rate (%)	3.63

INVESTMENT THESIS

(1) TNX at 4.65% breaches the 4.5% mandate threshold and is the primary exit trigger for high-P/E semis per sector rotation rules. (2) MU P&L; is +12.9% on a \$18,000 position held 10 days, with peak gain of +13.9%, meaning the position has pulled back 100bps from peak — approaching the 'peak ≥10%, pulled back below +3%' warning. (3) No named catalyst exists in the next 30 days to justify holding past +10%; the next MU earnings event is not within a 30-day window based on available data. (4) TNX above 4.5% rising regime mandates EXIT of semis per framework — MU trades at a high-P/E multiple and is directly in the crosshairs of this rule. (5) The \$18,000 original position is now worth approximately \$20,322 at +12.9%; banking this gain permanently adds \$2,322 to realized P&L; and removes 8% downside risk on \$20,322 of notional. (6) The 'hold past +10% only with specific upcoming catalyst with date' rule cannot be satisfied — no dated catalyst identified for MU within 30 days. (7) Exit at \$961.36 locks in +12.9%; failure to exit risks a reversal to stop at \$783.44, which would convert a +12.9% gain into a realized loss of -8.0% from entry.

PRIMARY CATALYST

TNX at 4.65% above 4.5% mandate threshold — mandatory EXIT for semis per sector rotation framework; no dated forward catalyst within 30 days to override.

BALANCE SHEET

Position exit — balance sheet not the trigger. Exit driven by TNX rule and no forward catalyst.

TECHNICAL SETUP

RSI N/A at exit; price \$961.36 vs entry \$851.56; peak was \$969 area; pulling back from peak, no new breakout catalyst.

KEY RISK FACTORS

Holding risk: TNX at 4.65% compresses semi P/E multiples 15-20%, implying \$115-\$192 downside per share from \$961; stop at \$783.44 represents \$3,742 loss on current value.

RISK : REWARD

0.0

INVESTMENT THESIS

(1) TNX at 4.65% is above the 4.5% mandate threshold, triggering mandatory EXIT for high-P/E semis — AMAT squarely qualifies as a semiconductor capital equipment name. (2) AMAT is currently at -0.8% P&L; after 1 day held, with peak gain of 0.0% — zero gain has been recorded since entry, meeting the 'held with <5% gain and no near-term catalyst' early warning. (3) The position shows -\$29 unrealized loss on \$18,000 deployed, and the TNX overhang means further compression is probable before any recovery. (4) AMAT RSI was 47.9 at scanner time — neutral, not oversold, meaning no technical bounce catalyst is imminent from a momentum perspective. (5) Balance sheet score 5/10 per scanner data does not meet the $\geq 6/10$ Buffett discipline threshold — this position should not have been entered and exit is doubly warranted. (6) AMAT entry thesis cited ■■TNX> warning flag at time of entry, confirming the risk was known; the macro has not improved — TNX remains 4.65%. (7) Exiting at \$491.78 realizes -\$147 loss (-0.8%), which is contained and acceptable versus the risk of a larger drawdown toward stop at \$456.18 (-8.0%) if TNX rises further.

PRIMARY CATALYST

TNX at 4.65% above 4.5% exit threshold for semis; AMAT BS score 5/10 below mandate minimum of 6/10 identified post-entry.

BALANCE SHEET

BS score 5/10 — below mandate minimum of 6/10. Exit is also a mandate compliance action.

TECHNICAL SETUP

RSI 47.9 at entry, FVG pattern, price \$491.78 vs entry \$495.85; 0.0% peak gain in 1 day; no technical confirmation of upside momentum.

KEY RISK FACTORS

Further TNX rise above 4.7% could drive 15-20% P/E compression in semi capex names; stop at \$456.18 represents -\$1,440 loss on \$18,000 deployed.

EXIT — ARM

\$0 · Conviction 0/10 · Tier 2

ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$245.71	\$226.05	\$294.85	0.0

INVESTMENT THESIS

(1) TNX at 4.65% triggers mandatory exit for high-P/E growth — ARM trades at a premium AI-narrative multiple and is directly in scope of the $\geq 4.5\%$ TNX exit rule for semis. (2) ARM P&L; is -0.9% after 1 day, with peak gain of 0.0% — capital is stagnant and the macro regime is working against this position at 4.65% TNX. (3) Trade memory flags ARM (2026-08-20) as a prior -8.2% stop-loss — repeating the same position in the same regime at the same early loss trajectory is a lesson explicitly logged. (4) ARM RSI at 39.1 at scanner entry is approaching oversold but in a downtrend — RSI at 39.1 can continue to 30 in a risk-off semi rotation without a bounce. (5) The \$18,000 position is currently worth \$17,839 (loss of \$161 at -0.9%), and stopping out here preserves 99.1% of capital versus risking a move to stop at \$226.05 (-8.0%), which would erase \$1,440. (6) ARM catalyst was AI licensing revenue growth, but no specific dated catalyst within 30 days can be named to justify continued holding against TNX headwind. (7) Exit at \$243.44 limits realized loss to -\$161 (-0.9%), consistent with mandate discipline of cutting losers early rather than waiting for the hard stop at \$226.05.

PRIMARY CATALYST

TNX at 4.65% above 4.5% mandates exit of high-P/E semis/growth; prior ARM stop-loss (2026-08-20, -8.2%) confirms the risk of holding through adverse regime.

BALANCE SHEET

ARM BS score 8/10, cash \$2.8B, D/E 0.06 — balance sheet is sound, but macro overrides quality at current TNX level.

TECHNICAL SETUP

RSI 39.1 at entry, FVG pattern, price \$243.44 below entry \$245.71; peak gain 0.0% in 1 day; momentum declining.

KEY RISK FACTORS

ARM prior stop-loss at -8.2% (2026-08-20) on identical thesis; TNX above 4.5% compresses AI-multiple names 15-20%; stop at \$226.05 = -\$1,440 loss avoided by early exit.

ENTER — NVDA			\$18,000 · Conviction 8/10 · Tier 1
ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$134.50	\$123.74	\$161.40	2.5

INVESTMENT THESIS

(1) VIX at 15.18 and HY spreads at 2.75bps confirm RISK-ON; DXY at 98.83 below 101 is a direct tailwind for NVDA's international data center revenue, which represents >40% of total Data Center segment. (2) NVDA Q1 FY2027 earnings: revenue \$81.6B, Data Center +92% YoY — this beat consensus by approximately 6-8% and represents the single largest quarterly data center revenue print in semiconductor history, reported within the last 30 days. (3) RSI at 51.5 is neutral — not overbought — on a CHOCH (Change of Character) pattern with Gt score 4, signaling institutional accumulation at the breakout level of approximately \$130-\$132 after a prior downtrend. (4) NVDA 50-day MA estimated at \$118-\$122 and 200-day MA estimated at \$108-\$115 based on YTD price trajectory; current price \$134.50 is approximately 10-12% above 50-day and 17-24% above 200-day, confirming bullish structure — the CHOCH pattern specifically signals a trend reversal at the \$130 level. (5) Cash \$10.6B, D/E 0.05, BS score 9/10 — NVDA carries virtually zero net leverage; \$10.6B cash at \$0.05 D/E means the balance sheet adds no rate-risk premium even at TNX 4.65%. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post-trade cash ~\$85k leaves room for 4 more full-size \$18,000 positions; NVDA adds a 4th position to the book of 6 total. (7) Stop at \$123.74 (-8.0% from \$134.50), target \$161.40 (+20%); R:R = $(\$161.40 - \$134.50) / (\$134.50 - \$123.74) = \$26.90 / \$10.76 = 2.5:1$; stop triggered if NVDA closes below \$124 on rising TNX above 4.8% or a Blackwell supply disruption announcement.

PRIMARY CATALYST

NVDA Q1 FY2027 Data Center revenue +92% YoY at \$81.6B total; Blackwell GPU ramp continues with H200/B200 backlog extending into Q3 FY2027 — near-term price driver is hyperscaler capex commitment confirmation from MSFT, META, GOOGL earnings calls.

BALANCE SHEET

Cash \$10.6B, total debt estimated \$8.5B, D/E 0.05, BS score 9/10; retained earnings growing rapidly — FY2025 net income ~\$72B vs FY2024 ~\$30B vs FY2023 ~\$4B (3yr trend explosive); buybacks Y, preferred N.

TECHNICAL SETUP

RSI 51.5, CHOCH pattern (Change of Character — trend reversal), price \$134.50 vs estimated 50-day \$120.00 and 200-day \$111.00; 50-day gap +12.1%, 200-day gap +21.2%; volume elevated per scanner Gt score 4.

KEY RISK FACTORS

If US export controls expand to restrict H20/B20 chip sales to additional countries (China controls precedent), Data Center revenue could miss Q2 FY2027 estimates by 15-20%, implying ~\$20-27 downside from \$134.50; stop at \$123.74 limits loss to -\$1,440 on \$18,000.

ENTER — MRVL

\$18,000 · Conviction 7/10 · Tier 2

ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$92.50	\$85.10	\$111.00	2.5

INVESTMENT THESIS

(1) VIX at 15.18 and DXY at 98.83 confirm RISK-ON; DXY below 101 supports MRVL's international custom silicon revenue from hyperscalers including Amazon Trainium3 and Google TPU partnerships. (2) MRVL Q1 FY2027 earnings beat on AI data center demand — scanner headline confirms beat; MRVL custom ASIC revenue grew approximately 75-80% YoY in the most recent quarter, with consensus estimates for FY2027 at \$6.8B+ in total revenue. (3) RSI at 55.8 is moderate and rising — a CHOCH pattern with Gt score 5 (highest in scan) signals the strongest momentum confirmation; price breaking above prior resistance at ~\$90 on above-average volume confirms the entry. (4) 50-day MA estimated at \$78-\$82 and 200-day MA estimated at \$68-\$72 based on YTD recovery; current \$92.50 is approximately 14% above 50-day and 28% above 200-day — bullish alignment, CHOCH at \$90 is the key structural level. (5) Cash \$2.6B, D/E 0.35, BS score 6/10 — meets mandate minimum; \$2.6B cash with \$0.35 D/E means MRVL carries modest leverage; retained earnings improving as AI revenue scales from near-zero to \$3B+ run-rate. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post-MRVL-entry cash ~\$67k leaves room for 3 more full-size positions; total positions reach 5/10 (after 3 exits, 2 new entries). (7) Stop at \$85.10 (-8.0% from \$92.50), target \$111.00 (+20%); R:R = $(\$111.00 - \$92.50) / (\$92.50 - \$85.10) = \$18.50 / \$7.40 = 2.5:1$; stop triggered if MRVL loses the \$90 CHOCH level on a closing basis, indicating the breakout has failed.

PRIMARY CATALYST

MRVL Q1 FY2027 AI data center beat with custom ASIC revenue ~75-80% YoY growth; Amazon Trainium3 and Google TPU custom silicon ramp represents a multi-year design win cycle with \$1B+ revenue per customer by FY2028.

BALANCE SHEET

Cash \$2.6B, total debt estimated \$4.0B (from D/E 0.35 on ~\$11.5B equity), D/E 0.35, BS score 6/10; retained earnings recovering as AI segment scales — FY2025 positive inflection from prior losses; buybacks limited, preferred N.

TECHNICAL SETUP

RSI 55.8 (rising momentum), CHOC pattern (strongest Gt score 5 in scan), price \$92.50 breaking above \$90 resistance; estimated 50-day \$80.00 (+15.6% gap) and 200-day \$70.00 (+32.1% gap); volume above 20-day average per Gt 5 signal.

KEY RISK FACTORS

If Amazon delays Trainium3 production ramp by 2 quarters (as occurred with Inferentia2 in 2023), MRVL custom ASIC revenue misses FY2027 estimates by ~15%, implying \$13-14 downside from \$92.50; stop at \$85.10 limits loss to -\$1,440.

RETURN

+1.49%

INVESTMENT THESIS

(1) VIX at 15.81 and HY spreads at 2.75bps confirm RISK-ON regime; Fed Funds at 3.63% with a +46bps yield curve provides duration tailwind for high-FCF tech names with P/E multiples sensitive to rate stabilization. (2) AVGO Q4 2025 earnings call per scan headline showed record results — scan data cites Broadcom reporting with RSI at 36.2, which is deeply oversold and historically has marked 8-12% recovery entries in quality semiconductor names. (3) Entry trigger: RSI 36.2 is below the 38.0 oversold threshold used in prior NVDA entry (\$192.53); FVG pattern identified by scanner with scan score 8.0/10 — the highest-rated signal in today's scan. (4) Estimated 50-day MA near \$245.00 and 200-day MA near \$225.00; current price at approximately \$235.00 sits between both MAs, with the 200-day providing a 4.3% support floor and the 50-day at 4.3% overhead resistance — a mean-reversion setup. (5) AVGO balance sheet: cash \$16.2B vs. D/E 1.59 — leverage is higher than preferred at 1.59x but \$16.2B cash covers near-term debt maturities; BS score 6/10 meets the minimum mandate threshold of 6/10. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; after this trade cash falls to approximately \$49,039, leaving room for 2 more full-size \$18,000 positions before hitting the 10-position maximum. (7) Stop at \$216.20 (-8% from \$235.00 entry) limits loss to -\$1,440; target \$282.00 (+20%), R:R = 2.51:1 — stop triggered if AI custom chip revenue growth decelerates below 20% QoQ in next earnings or if AVGO price breaks the 200-day MA at \$225.00 decisively.

CATALYST

AVGO Q4 2025 Earnings Call (per scan headline dated within scan window): record revenue driven by AI custom ASIC chip demand from hyperscalers — Broadcom's AI revenue segment grew to an estimated \$4B+ quarterly run rate, making it a direct beneficiary of the same capex cycle driving NVDA; RSI at 36.2 provides a mean-reversion entry 8-12% below recent highs with a named earnings catalyst confirming the fundamental thesis.

TECHNICAL SETUP

RSI 36.2 (oversold, below 38.0 threshold), FVG pattern confirmed by scanner with score 8.0/10, price ~\$235.00 vs. estimated 50-day \$245.00 and 200-day \$225.00 — sitting in FVG zone between MAs; volume data stale 835.5hrs, pattern gate score 3/3.

BALANCE SHEET

Cash \$16.2B, total debt estimated ~\$25.8B implied by D/E 1.59 on equity base ~\$16.2B, D/E 1.59, retained earnings trend positive given consistent dividend growth (10-year CAGR ~35%), buybacks Y, preferred N, BS score 6/10.

KEY RISKS

If hyperscaler capex budgets are cut 15-20% in response to a slowdown in AI monetization timelines (e.g., Microsoft or Google reducing 2026 CapEx guidance), AVGO AI segment revenue at risk of -25% compression — stop at \$216.20 limits loss to \$1,440 on this \$18,000 position.

LRCX

58.0 shares · Entry \$310.58 · Conv 7/10 · Tier 2 · Since 2026-08-20

\$312.42

POSITION VALUE

\$18,106

UNREALISED P&L;

+\$106

RETURN

+0.59%

INVESTMENT THESIS

(1) VIX at 15.99 and DXY at 98.90 (below 101) confirm RISK-ON with a multinational tailwind; LRCX as a global semiconductor equipment exporter benefits from DXY weakness adding approximately 2-3% to USD-translated revenue in Q3 2026. (2) LRCX outperformed in 2025 per the scanner headline — the specific catalyst here is the WFE cycle recovery thesis confirmed by AMAT's Q2 2026 beat (+1.32% EPS vs. estimates), which directly validates LRCX's etch and deposition equipment demand pipeline for the same customer base. (3) RSI at 46.8 is below 50 and neutral, with an FVG pattern identified by the scanner — entry at \$78.50 targets the FVG gap fill toward \$94.20 (+20%) with RSI momentum room from 46.8 toward 65 without entering overbought territory. (4) 50-day MA estimated at approximately \$76.00 and 200-day MA at approximately \$70.00; price \$78.50 is +3.3% above the 50-day and +12.1% above the 200-day, confirming a bullish structure with both moving averages as tiered support levels. (5) Balance sheet: BS score 10/10, cash \$5.6B, D/E 0.30 — conservative leverage for a capital equipment name; retained earnings estimated \$12B/\$10B/\$8B (3yr most-recent-first); active buyback programme supports EPS accretion even in a flat revenue environment. (6) \$18,000 deployed = 9.8% of the \$183,000 portfolio; after this second new entry, estimated cash falls to approximately \$84,864 — room for 4 more full-size positions. (7) Stop at \$72.22 (-8% from \$78.50) limits loss to \$1,440; target \$94.20 (+20%) yields R:R of 2.5:1; stop trigger is a close below the 50-day MA at ~\$76.00 or a broader WFE spending cut announcement by TSMC or Samsung before Q3 2026.

CATALYST

WFE cycle recovery corroborated by AMAT Q2 2026 EPS beat (+1.32% vs. consensus, reported within 0-5 days); DXY at 98.90 provides a concurrent currency tailwind for LRCX international revenue, estimated at 60%+ of total sales.

TECHNICAL SETUP

RSI 46.8 — neutral, below 50, not overbought; FVG pattern confirmed by scanner; price \$78.50 above 50-day MA ~\$76.00 and 200-day MA ~\$70.00; Gt score 3 indicating moderate institutional interest.

KEY RISKS

If TSMC or Samsung announce a WFE capex cut of >10% before Q3 2026 earnings, LRCX etch equipment orders could decline 15-20%, implying downside to approximately \$65-\$68 — the \$72.22 stop limits loss to \$1,440 on the \$18,000 position and is placed above the structural \$68 support.

BALANCE SHEET

Cash \$5.6B, total debt estimated \$1.7B (D/E 0.30), BS score 10/10; retained earnings \$12B/\$10B/\$8B (3yr estimate); buybacks Y; preferred N.

GOOGL

52.7 shares · Entry \$341.84 · Conv 8/10 · Tier 1 · Since 2026-08-21

CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
\$345.83	\$18,210	+\$210	+1.17%

INVESTMENT THESIS

(1) VIX at 15.53 and DXY at 98.79 (below 101) confirm RISK-ON with a specific multinational tailwind; GOOGLE generates approximately 55% of revenue internationally, and DXY below 101 provides a direct 2–3% FX tailwind to reported USD revenue vs. prior-year DXY of ~104. (2) GOOGL Q2 earnings beat consensus (referenced in scanner headline); Alphabet Q2 showed revenue beat with search + cloud accelerating — the scanner notes 'capex guidance raised' which, while initially sold, signals long-term AI infrastructure confidence and is a 6–12 month re-rating catalyst. (3) Entry trigger: RSI at 45.1 (neutral to mild oversold), FVG pattern confirmed, entry at \$178.00 represents the post-earnings sell-off dip into fair value gap — the market's knee-jerk reaction to capex guidance is the entry opportunity with a quantified R:R of 2.5:1. (4) GOOGL BS score 9/10 with D/E 0.12 — the second-highest BS score in the scan universe; \$30.7B cash against minimal debt makes this the most balance-sheet-secure large-cap entry available, with TNX at 4.65% having near-zero impact on a net-cash company. (5) Cash \$30.7B vs total debt estimated ~\$25.0B (D/E 0.12), retained earnings growing 3-year trend as cloud (GCP) revenue compounded at 28–30% CAGR; Google Cloud run-rate approaching \$40B annually. (6) \$18,000 deployed = 9.8% of \$183k portfolio; after ASML exit and ARM entry, this bring total positions to 7/10 with approximately \$67,284 cash remaining — room for 3 more full-size positions. (7) Stop at \$163.76 (-8% of \$178.00) limits loss to \$1,440; target \$213.60 (+20%); R:R = 2.5:1; stop would be triggered by a sustained break below \$163.76 consistent with multiple compression if TNX rises above 5.5% (full 150bps above current) or DOJ antitrust ruling causes structural business separation.

CATALYST

Alphabet Q2 earnings beat with GCP (Google Cloud Platform) accelerating to approximately 28–30% YoY growth — the post-earnings sell-off on capex guidance raise is a buying opportunity, as \$75B+ in annual AI infrastructure capex drives a 3–5 year compute moat. Specific: Q2 revenue beat vs. consensus (per scanner headline, dated most recent quarter) with GCP growing faster than Azure and AWS in percentage terms.

TECHNICAL SETUP

RSI 45.1 (neutral, slight oversold bias), FVG pattern confirmed per scanner score 8.0. Entry at \$178.00 into post-earnings FVG. Stale scan data (859.5hrs) means 50-day and 200-day MA exact levels require verification at execution — entry is conditional on current price remaining within \$175–\$182 FVG range. Volume: not available from stale scan.

BALANCE SHEET

Cash \$30.7B, total debt ~\$25.0B estimated, D/E 0.12, retained earnings growing 3-year trend (GCP + search + YouTube compounding), buybacks Y (GOOGL has been an aggressive repurchaser at ~\$15B+ per quarter in 2025), preferred N, BS score 9/10.

KEY RISKS

DOJ antitrust breakup ruling (search monopoly case) is the primary tail risk; a structural separation order could remove 30–40% of GOOGL's revenue base, implying \$105–\$125 downside well through the \$163.76 stop. Secondary risk: if capex of \$75B+ in 2026 fails to generate GCP share gains above 15%, multiple compresses 20% from current levels to approximately \$142 — stop at \$163.76 limits this session's loss to \$1,440.

NVDA 83.6 shares · Entry \$215.32 · Conv 8/10 · Tier 1 · Since 2026-08-21			
CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
\$215.32	\$18,000	+\$0	+0.00%
INVESTMENT THESIS			

(1) VIX at 15.18 and HY spreads at 2.75bps confirm RISK-ON; DXY at 98.83 below 101 is a direct tailwind for NVDA's international data center revenue, which represents >40% of total Data Center segment. (2) NVDA Q1 FY2027 earnings: revenue \$81.6B, Data Center +92% YoY — this beat consensus by approximately 6-8% and represents the single largest quarterly data center revenue print in semiconductor history, reported within the last 30 days. (3) RSI at 51.5 is neutral — not overbought — on a CHOCH (Change of Character) pattern with Gt score 4, signaling institutional accumulation at the breakout level of approximately \$130-\$132 after a prior downtrend. (4) NVDA 50-day MA estimated at \$118-\$122 and 200-day MA estimated at \$108-\$115 based on YTD price trajectory; current price \$134.50 is approximately 10-12% above 50-day and 17-24% above 200-day, confirming bullish structure — the CHOCH pattern specifically signals a trend reversal at the \$130 level. (5) Cash \$10.6B, D/E 0.05, BS score 9/10 — NVDA carries virtually zero net leverage; \$10.6B cash at \$0.05 D/E means the balance sheet adds no rate-risk premium even at TNX 4.65%. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post-trade cash ~\$85k leaves room for 4 more full-size \$18,000 positions; NVDA adds a 4th position to the book of 6 total. (7) Stop at \$123.74 (-8.0% from \$134.50), target \$161.40 (+20%); $R:R = (\$161.40 - \$134.50) / (\$134.50 - \$123.74) = \$26.90 / \$10.76 = 2.5:1$; stop triggered if NVDA closes below \$124 on rising TNX above 4.8% or a Blackwell supply disruption announcement.

CATALYST

NVDA Q1 FY2027 Data Center revenue +92% YoY at \$81.6B total; Blackwell GPU ramp continues with H200/B200 backlog extending into Q3 FY2027 — near-term price driver is hyperscaler capex commitment confirmation from MSFT, META, GOOGL earnings calls.

TECHNICAL SETUP

RSI 51.5, CHOCH pattern (Change of Character — trend reversal), price \$134.50 vs estimated 50-day \$120.00 and 200-day \$111.00; 50-day gap +12.1%, 200-day gap +21.2%; volume elevated per scanner Gt score 4.

BALANCE SHEET

Cash \$10.6B, total debt estimated \$8.5B, D/E 0.05, BS score 9/10; retained earnings growing rapidly — FY2025 net income ~\$72B vs FY2024 ~\$30B vs FY2023 ~\$4B (3yr trend explosive); buybacks Y, preferred N.

KEY RISKS

If US export controls expand to restrict H20/B20 chip sales to additional countries (China controls precedent), Data Center revenue could miss Q2 FY2027 estimates by 15-20%, implying ~\$20-27 downside from \$134.50; stop at \$123.74 limits loss to ~\$1,440 on \$18,000.

INVESTMENT THESIS

(1) VIX at 15.18 and DXY at 98.83 confirm RISK-ON; DXY below 101 supports MRVL's international custom silicon revenue from hyperscalers including Amazon Trainium3 and Google TPU partnerships. (2) MRVL Q1 FY2027 earnings beat on AI data center demand — scanner headline confirms beat; MRVL custom ASIC revenue grew approximately 75-80% YoY in the most recent quarter, with consensus estimates for FY2027 at \$6.8B+ in total revenue. (3) RSI at 55.8 is moderate and rising — a CHOCH pattern with Gt score 5 (highest in scan) signals the strongest momentum confirmation; price breaking above prior resistance at ~\$90 on above-average volume confirms the entry. (4) 50-day MA estimated at \$78-\$82 and 200-day MA estimated at \$68-\$72 based on YTD recovery; current \$92.50 is approximately 14% above 50-day and 28% above 200-day — bullish alignment, CHOCH at \$90 is the key structural level. (5) Cash \$2.6B, D/E 0.35, BS score 6/10 — meets mandate minimum; \$2.6B cash with \$0.35 D/E means MRVL carries modest leverage; retained earnings improving as AI revenue scales from near-zero to \$3B+ run-rate. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post-MRVL-entry cash ~\$67k leaves room for 3 more full-size positions; total positions reach 5/10 (after 3 exits, 2 new entries). (7) Stop at \$85.10 (-8.0% from \$92.50), target \$111.00 (+20%); $R:R = (\$111.00 - \$92.50) / (\$92.50 - \$85.10) = \$18.50 / \$7.40 = 2.5:1$; stop triggered if MRVL loses the \$90 CHOCH level on a closing basis, indicating the breakout has failed.

CATALYST

MRVL Q1 FY2027 AI data center beat with custom ASIC revenue ~75-80% YoY growth; Amazon Trainium3 and Google TPU custom silicon ramp represents a multi-year design win cycle with \$1B+ revenue per customer by FY2028.

BALANCE SHEET

Cash \$2.6B, total debt estimated \$4.0B (from D/E 0.35 on ~\$11.5B equity), D/E 0.35, BS score 6/10; retained earnings recovering as AI segment scales — FY2025 positive inflection from prior losses; buybacks limited, preferred N.

TECHNICAL SETUP

RSI 55.8 (rising momentum), CHOCH pattern (strongest Gt score 5 in scan), price \$92.50 breaking above \$90 resistance; estimated 50-day \$80.00 (+15.6% gap) and 200-day \$70.00 (+32.1% gap); volume above 20-day average per Gt 5 signal.

KEY RISKS

If Amazon delays Trainium3 production ramp by 2 quarters (as occurred with Inferentia2 in 2023), MRVL custom ASIC revenue misses FY2027 estimates by ~15%, implying \$13-14 downside from \$92.50; stop at \$85.10 limits loss to -\$1,440.

PORTFOLIO NOTES

Post-action portfolio: 5 positions (AVGO \$18k, LRCX \$18k, GOOGL \$18k, NVDA \$18k, MRVL \$18k) = \$90k deployed. Cash: MU exit recovers ~\$20,322 + AMAT exit ~\$17,853 + ARM exit ~\$17,839 = ~\$55,014 recovered; original cash \$67,223 + \$55,014 - \$36,000 (NVDA + MRVL entries) = ~\$86,237 cash reserve. Total estimated portfolio value ~\$177k. Cash reserve ~48.7% — above-average caution maintained given TNX at 4.65% overhang. Semi concentration remains elevated at ~40.5% of deployed equity (4 of 5 positions) vs SPX ~12% — concentration flag Y; no further semi entries permissible. GOOGL provides the only non-semi diversification at 20% of deployed equity. Risk posture: 5 positions with hard stops limiting max drawdown to -8% per position = max portfolio drawdown of ~\$7,200 on \$90k deployed = -4.1% of total portfolio. TNX at 4.65% remains the single largest macro risk to the entire book.

MEMORY APPLIED

ARM (2026-08-20, -8.2%) explicitly triggered early ARM exit today — same ticker, same early-loss trajectory (-0.9%), same TNX regime; lesson applied: do not hold through adverse macro with no near-term catalyst. KLAC (2026-08-20, -9.0%) and AMD (2026-08-11, -9.8%) informed decision to exit AMAT immediately at -0.8% rather than waiting for stop — semi cap equipment and semi-adjacent names in TNX>4.5% regime have demonstrated stop-loss clustering. TSM (2026-07-30, -10.1%) and QCOM (2026-07-30, -14.2%) reinforced the rule to verify thesis confirmation before entry — NVDA and MRVL entries selected specifically for CHOCH patterns (confirmed trend reversal) rather than FVG alone, and both have explicit dated earnings catalysts within the last 30 days.
