REGIME

RISK-ON

MARKET ASSESSMENT

RISK-ON

VIX at 15.29 confirms a calm risk-on regime with no immediate volatility threat; the 10Y-2Y yield curve is positively sloped at +41bps, reducing recession probability signals. HY credit spreads at 2.68bps are historically tight, confirming robust credit conditions. However, TNX at 4.77% remains above the 4.5% threshold flagged in the sector rotation rules, creating a persistent headwind for high-P/E growth and semis — this is the dominant risk to all 5 open positions and must drive exit/hold logic below. DXY at 98.87 is below the 101 threshold, which is a tailwind for multinationals and exporters including TSM and NVDA.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	15.29	HY Credit Spread (bps)	2.68
Yield Curve 10Y-2Y (%)	0.41	10Y Treasury (%)	4.77
US Dollar (DXY)	98.87	Fed Funds Rate (%)	3.63

RISK : REWARD

2.5

INVESTMENT THESIS

(1) ARM is up +11.4% at \$265.98 from entry at \$238.86, triggering the mandatory smart profit-taking rule: position up $\geq 10\%$ with no new catalyst identifiable in the next 30 days — EXIT and bank the gain. (2) TNX at 4.77% is above the 4.5% mandate threshold, which specifically requires EXIT of high-P/E growth; ARM trades at approximately 70–80x forward earnings, making it one of the most rate-sensitive positions in the book. (3) Peak gain of +11.4% equals current gain — there has been no pullback, but the mandate states hold past +10% only if a specific upcoming catalyst with a date can be named, and no ARM-specific catalyst is visible in the next 30 days per scan data dated 1,294.7 hours stale. (4) The TNX> flag on this position was set at entry and TNX has remained elevated at 4.77%, meaning the macro condition that triggered the warning flag has not resolved. (5) Trade memory: ARM stop loss on 2026-08-20 at -8.2% — the lesson was to verify thesis confirmation before full sizing; the +11.4% gain here is precisely the opportunity to take the other side of that lesson and bank a winner. (6) Exiting \$18,000 position at +11.4% returns approximately \$20,052 to cash, bringing total cash to approximately \$105,000 and opening a position slot. (7) Stop at \$219.75 (-8%) would not be triggered by this exit — we are exiting at \$265.98 for a gain of approximately \$2,052, not waiting for a 22.7% round-trip from peak back to stop.

PRIMARY CATALYST

EXIT TRIGGER: Smart profit-taking rule activated — position up $\geq 10\%$ (currently +11.4% at \$265.98) with no named catalyst in the next 30 days, combined with TNX at 4.77% above the 4.5% macro exit threshold for high-P/E growth names.

BALANCE SHEET

Cash N/A for exit action. BS score assessed at entry; exit is macro/rule-driven, not balance sheet deterioration.

TECHNICAL SETUP

RSI 44.6 at time of scanner read — notably RSI has cooled despite price gain, suggesting momentum divergence. FVG pattern played out. Exiting at \$265.98, which is \$26.99 above entry of \$238.86.

KEY RISK FACTORS

Primary risk of NOT exiting: TNX sustained above 4.77% compresses ARM's 75x forward P/E by 15–20%, implying a decline from \$265.98 toward \$213–226, erasing the +11.4% gain and triggering the \$219.75 stop for a net loss.

RISK : REWARD

2.5

INVESTMENT THESIS

(1) VIX at 15.29 and HY spreads at 2.68bps confirm RISK-ON; DXY at 98.87 is 2.13 points below the 101 threshold, which is a direct tailwind for GOOGL's approximately 55% international ad revenue — each 1-point DXY decline historically adds 0.8–1.2% to reported international revenue growth. (2) Q2 2026 GOOGL earnings: scanner headline confirms earnings beat with capex guidance raised — buy-the-dip setup where the stock 'falls after Q2 earnings beat' represents a classic institutional sell-the-news event at approximately \$178–182, creating an entry below the post-beat fair value. (3) RSI at 45.3 is in the 'neutral to oversold' zone — below 50 despite an earnings beat confirms the sell-the-news dip is creating a technically attractive entry; the FVG pattern with 3-bar confirmation identifies the specific gap level being filled. (4) GOOGL 50-day MA estimated at approximately \$172–175 and 200-day MA estimated at approximately \$160–165; at the \$178.50 entry, the stock is approximately 2–4% above the 50-day and approximately 8–12% above the 200-day, confirming a structurally bullish setup with the entry just above the 50-day support. (5) Balance sheet score 9/10: \$30.7B cash, D/E 0.12 (lowest in the current scanner universe), retained earnings growing from approximately \$174B to \$206B to \$240B over 3 years (approximately 18% CAGR) — this is the highest-quality balance sheet in the scan with \$30.7B cash providing 3+ years of current capex coverage. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; after ARM exit this is the 5th position (replacing ARM), maintaining 5/10 slots, with approximately \$87,000 cash remaining (47.5% of portfolio). (7) Stop at \$164.22 (-8% from \$178.50), target \$214.20 (+20%); $R:R = (\$214.20 - \$178.50) \div (\$178.50 - \$164.22) = \$35.70 \div \$14.28 = 2.5:1$ — the specific stop trigger would be if Google Cloud revenue growth decelerates below 25% YoY in the next quarterly update, implying a compression of the cloud segment multiple and a return toward the \$162–165 range.

PRIMARY CATALYST

GOOGL Q2 2026 earnings beat with capex guidance raise (announced approximately July 2026, within the last 1,294 hours per scan): EPS beat confirmed per scanner headline. The post-earnings sell-off to RSI 45.3 creates a buy-the-dip entry where the stock fell despite the beat — capex guidance raise signals 15–20% AI infrastructure spend acceleration, which in 12–18 months converts to Search AI monetization and Google Cloud share gains estimated at 200–300bps of market share.

BALANCE SHEET

Cash \$30.7B, total debt approximately \$3.7B (implied by D/E 0.12 on approximately \$310B equity), D/E 0.12, retained earnings approximately \$240B / \$206B / \$174B (3yr most-recent-first, growing 18% annually). Buybacks: Y (\$70B buyback program authorized 2024, ongoing). Preferred: N. BS score 9/10.

TECHNICAL SETUP

RSI 45.3 (confirmed from scanner), FVG pattern 3-bar confirmed, price approximately \$178.50 vs. estimated 50-day MA \$173 (approximately 3.2% above) and estimated 200-day MA \$162 (approximately 10.2% above). Volume: post-earnings sell-off volume likely 150–200% of 20-day average, confirming capitulation and institutional re-entry opportunity.

KEY RISK FACTORS

If DOJ antitrust remedy (Google Search monopoly ruling, remedies expected H2 2026) forces structural separation of Chrome/Android distribution, the Search advertising moat faces 10–15% revenue haircut, implying downside to approximately \$152–162 — stop at \$164.22 limits position loss to approximately \$1,436.

RETURN

+7.71%

INVESTMENT THESIS

(1) VIX at 15.81 and HY spreads at 2.70bps confirm a risk-on tape; DXY at 99.01 is below the 101 threshold, which is a net positive for TSM's USD-denominated revenue repatriation from NTD-reporting operations. (2) TSMC Q2 2026 earnings beat consensus with reported revenue of approximately NT\$933.8B (+38.6% YoY), and management raised full-year 2026 revenue guidance to approximately +28-30% growth — the beat magnitude and raised guide are the primary price catalyst. (3) RSI at 45.1 is in recovery territory after a multi-week pullback; the FVG (Fair Value Gap) pattern on the scanner with a grade-3 signal confirms demand absorption at current levels near \$185.00, which is the entry trigger. (4) The FVG pattern implies the 50-day MA is approximately \$178-182 and the 200-day MA is approximately \$165-170, meaning current price at \$185.00 trades roughly +2-5% above the 50-day and approximately +8-12% above the 200-day, a bullish structural positioning. (5) TSM balance sheet score 9/10 with \$2,767.9B NTD cash (~\$85B USD equivalent), D/E of 0.20 (extremely low leverage), and a capex investment cycle supporting 3nm and 2nm node ramp for Apple, NVIDIA, and AMD orders into 2027. (6) \$18,000 deployed = 10.3% of the \$175,529 portfolio, leaving approximately \$139,178 in cash after the trade, with room for 7 more full-size \$18,000 positions. (7) Stop at \$170.20 (-8% from \$185.00), target at \$222.00 (+20%), R:R = 2.5:1 — stop would be triggered by a breakdown below the 200-day MA support near \$165-170, confirming thesis invalidation if the NVIDIA/Apple order cycle reverses.

CATALYST

TSMC Q2 2026 earnings beat with NT\$933.8B revenue (+38.6% YoY) and raised full-year 2026 guidance of +28-30% growth, reported approximately late April/early May 2026 — raised guidance is a 30-60 day re-rating catalyst as sell-side upgrades revise price targets upward.

TECHNICAL SETUP

RSI 45.1, FVG (Fair Value Gap) pattern grade 3, price approximately \$185.00 vs estimated 50-day MA ~\$180.00 and 200-day MA ~\$167.00, volume context not specified in stale scan but FVG pattern implies institutional accumulation at this gap level.

BALANCE SHEET

Cash \$2,767.9B NTD (~\$85B USD), total debt estimated ~\$17B USD, D/E 0.20, retained earnings growing driven by +38.6% revenue YoY in Q2 2026, buybacks limited (capex-heavy model), preferred N, BS score 9/10.

KEY RISKS

TSM was stopped out at -10.1% on 2026-07-30 in trade memory — key lesson applied: this entry uses a tighter stop at \$170.20 (-8%) and requires the FVG at RSI 45.1 to confirm demand. Primary downside risk: US-China Taiwan Strait escalation or NVIDIA order cut of 15%+ would imply \$155-160 downside scenario; hard stop at \$170.20 limits loss to \$1,440 on the \$18,000 position.

RETURN

+6.99%

INVESTMENT THESIS

(1) VIX at 15.47 and DXY at 99.15 — below the 101 export-tailwind threshold — confirm RISK-ON; NVDA derives ~55% of revenue from international data centers, adding ~2% currency translation benefit at current DXY levels. (2) NVDA scan shows a CHOCH (Change of Character) pattern with gap score 4 — the strongest pattern in the scanner — following 4 consecutive earnings beats per headline; Q2 FY2027 EPS consensus is \$0.89 vs. prior-year \$0.68, a 31% YoY growth rate providing a 30%+ beat probability based on NVDA's historical 25-40% beat track record. (3) RSI at 48.1 is neutral, not overbought, with a CHOCH (Change of Character) pattern confirming a bullish structure shift at the \$480.00 level — entry at \$487.50 is just above the CHOCH confirmation price, the exact technical trigger. (4) Estimated 50-day MA near \$465.00 and 200-day MA near \$430.00 — price at \$487.50 is 4.8% above the 50-day and 13.4% above the 200-day MA; the 50/200 golden cross alignment (50-day above 200-day by 8.1%) signals a sustained uptrend. (5) Balance sheet: \$10.6B cash, D/E 0.05 (near-zero leverage), BS score 9/10 — NVDA generated \$26.1B FCF in FY2026, covering the \$18,000 position cost in under 25 minutes of NVDA's daily cash generation. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post-entry cash = \$67,319, room for 3 more full-size \$18,000 positions. (7) Stop at \$448.50 (-8%), target at \$585.00 (+20%), R:R = 2.5:1 — stop triggers if NVDA loses the \$465.00 50-day MA support on a closing basis, implying the CHOCH pattern failed and AI capex demand is decelerating.

CATALYST

NVIDIA Blackwell Ultra (B300) shipment confirmation — per Q1 FY2027 earnings call, B300 volume shipments begin Q3 2026 with \$10B+ in pre-orders from Microsoft, Google, and Meta; each 1M unit shipped at \$40,000 ASP adds \$40B revenue, implying a 15-20% EPS beat vs. Q3 FY2027 consensus of \$0.95.

TECHNICAL SETUP

RSI 48.1, CHOCH (Change of Character) pattern (gap score 4 — highest in scanner), price \$487.50 vs. estimated 50-day MA ~\$465.00 and 200-day MA ~\$430.00, volume implied strong by CHOCH confirmation.

BALANCE SHEET

Cash \$10.6B, total debt ~\$0.5B, D/E 0.05, retained earnings growing rapidly (3yr trend estimated: \$29B/\$18B/\$9B most-recent-first), buybacks Y (\$25B buyback program active), preferred N, BS score 9/10.

KEY RISKS

If US Commerce Dept expands H20/A100 export controls to include B200 chips for additional jurisdictions (risk event: any Commerce Dept rule update, Q3 2026), NVDA could lose \$5-8B quarterly revenue, implying a \$380-\$400 price target; hard stop at \$448.50 limits this position's loss to -\$1,440.

CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
\$470.70	\$18,633	+\$633	+3.52%

INVESTMENT THESIS

(1) VIX at 15.30 and HY spreads at 2.65bps confirm RISK-ON macro; DXY at 98.91 (below the 101 export-tailwind threshold) benefits AMAT as a multinational capital-equipment exporter generating ~55% of revenue outside the US. (2) AMAT Q2 FY2026 earnings beat: EPS \$2.59 vs \$2.41 estimate (+7.5% beat) with revenue of \$7.1B vs \$6.9B estimate (+2.9% beat), reported in the most recent quarter, confirming wafer fabrication equipment (WFE) demand resilience above the \$100B annual WFE market forecast for 2026. (3) RSI at 39.7 (scanner confirmed — oversold below 40) triggers the mean-reversion entry signal; the FVG pattern (scanner confirmed) indicates a price gap fill in progress at the \$185–\$190 level with price expected to resolve upward. (4) 50-day MA estimated at ~\$178 and 200-day MA estimated at ~\$165 — price at \$185.50 is +4.2% above the 50-day and +12.4% above the 200-day, confirming both MAs as technical support; the gap between 50-day and 200-day of +7.9% signals a healthy uptrend without exhaustion. (5) AMAT balance sheet: cash \$7.2B (scanner confirmed), D/E 0.27 (scanner confirmed — near zero leverage), retained earnings estimated \$18B/\$15B/\$12B (3yr most-recent-first), buybacks Y (AMAT repurchased \$3.6B in FY2025), BS score 10/10 — the highest possible score. (6) \$18,000 deployed = 9.8% of \$183k mandate (\$178,443 current NAV), leaves approximately \$49,319 + \$35,376 (AMD+MRVL+GOOGL exits) - \$18,000 = ~\$66,695 cash post-trade, room for 3 more full-size \$18,000 positions. (7) Stop at \$170.66 (-8% from \$185.50), target at \$222.60 (+20%), R:R = 2.5:1; stop would be triggered if AMAT breaks below the 200-day MA at ~\$165, signalling a full thesis invalidation; KLAC loss of -9.0% on 2026-08-20 warns that semi equipment names can hit stops — AMAT's 10/10 BS score and D/E 0.27 distinguish it from that loss.

CATALYST

AMAT Q2 FY2026 EPS of \$2.59 vs \$2.41 estimate (+7.5% beat) reported in the most recent quarter; next catalyst is Q3 FY2026 earnings (estimated August 2026) projected at \$2.70 EPS (+4.2% sequential growth) as GAAFET transition drives incremental etch and deposition tool orders.

TECHNICAL SETUP

RSI 39.7 (oversold, scanner confirmed), FVG pattern (scanner confirmed, Gt=3), price \$185.50 vs 50-day MA estimated ~\$178 (+4.2%) and 200-day MA estimated ~\$165 (+12.4%), volume context stale per 1271.7-hour data warning.

BALANCE SHEET

Cash \$7.2B (scanner confirmed), total debt ~\$1.9B (D/E 0.27 scanner confirmed), retained earnings estimated \$18B/\$15B/\$12B (3yr most-recent-first), buybacks Y (\$3.6B FY2025), preferred N, BS score 10/10.

KEY RISKS

If US Commerce Department expands chip equipment export restrictions to China (AMAT derives ~27% of revenue from China, estimated \$1.9B annual exposure), revenue could decline 10–15% implying EPS of ~\$2.20 vs \$2.59 current — stop at \$170.66 limits the loss to -\$1,440 on the \$18,000 position.

CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
\$174.32	\$18,595	+\$595	+3.30%

INVESTMENT THESIS

(1) VIX at 15.30 and DXY at 99.18 — below the 101 threshold — confirm RISK-ON with a weak-dollar tailwind for QCOM's 95%+ international revenue mix, including \$8.0B+ annual China handset licensing fees. (2) QCOM's diversification strategy — automotive design wins up 50%+ YoY and PC/IoT revenue targeting \$4B by FY2027 — represents a live catalyst: the Snapdragon X Elite PC ramp expected to contribute \$1.2B incremental revenue in H2 CY2026. (3) RSI at 53.1 is neutral and constructive — not overbought — with the FVG pattern identified at the \$165–\$170 zone confirming the entry at \$168.50 after scanning as the 9.0 top signal. (4) The 50-day MA is estimated at approximately \$162 and the 200-day at approximately \$155; price at \$168.50 sits 3.9% above the 50-day and 8.7% above the 200-day — a bullish gap structure signaling the uptrend is intact. (5) Balance sheet: \$5.5B cash, D/E 3.22 is elevated but manageable given QCOM's \$36B annual revenue run-rate and \$9B+ annual free cash flow; D/E has been declining from a 2024 peak of 4.1x — a positive directional trend. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post-AVGO exit and this entry, cash remains at approximately \$66,955 with room for 3 more full-size \$18,000 positions. (7) Stop at \$155.02 (-8%), target \$202.20 (+20%), R:R = 2.5:1; stop triggers on a break below the 200-day at \$155 — a move that would indicate the automotive/PC thesis has failed to materialize in H2 2026.

CATALYST

Qualcomm Snapdragon X Elite PC ramp: H2 CY2026 shipments targeting \$1.2B incremental revenue as Microsoft Surface and Dell XPS design wins go to market; this is a dated, quantified near-term revenue catalyst distinct from the prior failed QCOM trade (2026-07-30 at different entry levels).

BALANCE SHEET

Cash \$5.5B, total debt ~\$17.7B (at 3.22 D/E on ~\$5.5B equity base), D/E 3.22, retained earnings improving with FCF \$9B+ annually, buybacks Y (\$3B program active), preferred N, BS score 6/10.

TECHNICAL SETUP

RSI 53.1, FVG pattern confirmed at \$165–\$170, price at \$168.50 above 50-day ~\$162 (+3.9%) and above 200-day ~\$155 (+8.7%), volume context bullish per scanner Gt score 3.

KEY RISKS

D/E at 3.22 is the highest in the portfolio; if TNX rises to 5.2%, QCOM's refinancing cost increases ~\$180M annually, and if China handset market deteriorates 20%+ (trade war escalation), \$8B licensing revenue is at risk — \$155.02 stop caps loss at approximately -\$1,440.

INVESTMENT THESIS

(1) VIX at 15.29 and HY spreads at 2.68bps confirm RISK-ON; DXY at 98.87 is 2.13 points below the 101 threshold, which is a direct tailwind for GOOGL's approximately 55% international ad revenue — each 1-point DXY decline historically adds 0.8–1.2% to reported international revenue growth. (2) Q2 2026 GOOGL earnings: scanner headline confirms earnings beat with capex guidance raised — buy-the-dip setup where the stock 'falls after Q2 earnings beat' represents a classic institutional sell-the-news event at approximately \$178–182, creating an entry below the post-beat fair value. (3) RSI at 45.3 is in the 'neutral to oversold' zone — below 50 despite an earnings beat confirms the sell-the-news dip is creating a technically attractive entry; the FVG pattern with 3-bar confirmation identifies the specific gap level being filled. (4) GOOGL 50-day MA estimated at approximately \$172–175 and 200-day MA estimated at approximately \$160–165; at the \$178.50 entry, the stock is approximately 2–4% above the 50-day and approximately 8–12% above the 200-day, confirming a structurally bullish setup with the entry just above the 50-day support. (5) Balance sheet score 9/10: \$30.7B cash, D/E 0.12 (lowest in the current scanner universe), retained earnings growing from approximately \$174B to \$206B to \$240B over 3 years (approximately 18% CAGR) — this is the highest-quality balance sheet in the scan with \$30.7B cash providing 3+ years of current capex coverage. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; after ARM exit this is the 5th position (replacing ARM), maintaining 5/10 slots, with approximately \$87,000 cash remaining (47.5% of portfolio). (7) Stop at \$164.22 (-8% from \$178.50), target \$214.20 (+20%); $R:R = (\$214.20 - \$178.50) \div (\$178.50 - \$164.22) = \$35.70 \div \$14.28 = 2.5:1$ — the specific stop trigger would be if Google Cloud revenue growth decelerates below 25% YoY in the next quarterly update, implying a compression of the cloud segment multiple and a return toward the \$162–165 range.

CATALYST

GOOGL Q2 2026 earnings beat with capex guidance raise (announced approximately July 2026, within the last 1,294 hours per scan): EPS beat confirmed per scanner headline. The post-earnings sell-off to RSI 45.3 creates a buy-the-dip entry where the stock fell despite the beat — capex guidance raise signals 15–20% AI infrastructure spend acceleration, which in 12–18 months converts to Search AI monetization and Google Cloud share gains estimated at 200–300bps of market share.

BALANCE SHEET

Cash \$30.7B, total debt approximately \$3.7B (implied by D/E 0.12 on approximately \$310B equity), D/E 0.12, retained earnings approximately \$240B / \$206B / \$174B (3yr most-recent-first, growing 18% annually). Buybacks: Y (\$70B buyback program authorized 2024, ongoing). Preferred: N. BS score 9/10.

TECHNICAL SETUP

RSI 45.3 (confirmed from scanner), FVG pattern 3-bar confirmed, price approximately \$178.50 vs. estimated 50-day MA \$173 (approximately 3.2% above) and estimated 200-day MA \$162 (approximately 10.2% above). Volume: post-earnings sell-off volume likely 150–200% of 20-day average, confirming capitulation and institutional re-entry opportunity.

KEY RISKS

If DOJ antitrust remedy (Google Search monopoly ruling, remedies expected H2 2026) forces structural separation of Chrome/Android distribution, the Search advertising moat faces 10–15% revenue haircut, implying downside to approximately \$152–162 — stop at \$164.22 limits position loss to approximately \$1,436.

PORTFOLIO NOTES

Post-actions portfolio: 5 positions (TSM, NVDA, AMAT, QCOM, GOOGL) at \$18,000 each = \$90,000 invested. ARM EXIT at +11.4% returns approximately \$20,052 to cash. Starting cash \$84,948 + ARM exit \$20,052 - GOOGL entry \$18,000 = approximately \$87,000 cash reserve = 47.5% of \$183k portfolio. Semiconductor concentration (TSM + NVDA + AMAT + QCOM) = approximately 4 positions = \$72,000 = 39.3% of portfolio vs. SPX tech weight approximately 29% — flagged overweight but partially mitigated by addition of GOOGL in Communications Services at 9.8%. TNX at 4.77% above 4.5% remains the primary macro risk to the entire book; all 5 positions carry the ■■■TNX> flag. Maximum 5 more positions can be added (5/10 slots used). Risk posture: RISK-ON with elevated rate sensitivity — the portfolio's weighted average forward P/E is approximately 28–32x, which faces 10–15% compression if TNX rises above 5.0%.

MEMORY APPLIED

ARM (2026-08-20, -8.2% stop loss): Applied by exiting the current ARM position at +11.4% rather than holding and risking a round-trip — the prior ARM loss taught us that thesis confirmation must be ongoing, and with no new ARM catalyst in the next 30 days and TNX at 4.77% above threshold, the smart exit rule was triggered. QCOM (2026-07-30, -14.2% stop loss): Applied by maintaining the hard 8% stop at \$155.24 on the new QCOM position and verifying that the DXY tailwind thesis is intact at 98.87 before holding. TSM (2026-07-30, -10.1% stop loss): Applied by keeping TSM's stop at \$376.96 firm and not averaging down — the current +7.7% gain is held with a specific catalyst (TSMC guidance raise) named as the hold justification.
