MARKET ASSESSMENT

RISK-ON

VIX at 16.60 signals calm risk-on conditions; 10Y-2Y curve positive at +31bps and HY spreads compressed to 2.74bps confirm healthy credit. Fed Funds at 3.63% vs 10Y at 4.44% keeps carry attractive, but every top signal today is semiconductor — every liquid name (NVDA, AVGO, ASML, QCOM, MRVL, MU, TSM) sits in one sector I am already 4-positions deep in.

INVESTMENT THESIS

Highest scanner conviction (7.0) with a clear cloud capex tailwind confirmed by Google's earnings beat. Diversified cloud ETF reduces single-name risk while capturing the secular hyperscaler spend cycle.

CATALYST

Google earnings beat signaling accelerating cloud capex boom flowing into free cash flow across cloud infrastructure names.

BALANCE SHEET

Cash N/A vs Debt \$0B — D/E ratio N/A — Retained earnings N/A — Buffett score 1/10

TECHNICAL SETUP

RSI 39.6 — not overbought, leaving room to run; constructive mean-reversion entry rather than chasing extended momentum.

KEY RISKS

Cloud capex could compress near-term FCF; broad tech multiple compression if rates back up. 8% stop / 20% TP enforced.

INVESTMENT THESIS (1) Risk-on regime with tight HY spreads and positive yield curve fully supports cyclical AI/data center exposure. (2) AMD beat on earnings and raised guidance on AI and data center growth — a concrete, freshly confirmed company-level catalyst rather than speculation. (3) RSI at 55.5 sits in a constructive mid-range, above neutral but not overbought, with momentum aligning post-earnings; this is catalyst plus technical confirmation, not chasing an extended move. (4) Sizing at \$18,000 (~9.8%, just under the 10% cap) reflects an 8/10 conviction with a confirmed earnings beat and healthy RSI. (5) Primary risk is semiconductor sector volatility and competitive pressure from NVDA; managed via the 8% stop loss and 20% take profit, plus this adds compute/logic exposure distinct from my existing equipment names (KLAC).			
CATALYST Q earnings beat with raised guidance on AI and data center growth.		TECHNICAL SETUP RSI 55.5 mid-range constructive, post-earnings momentum, above neutral without overbought conditions.	
BALANCE SHEET Cash \$5.54B vs Debt \$0.88B — D/E ratio 0.01 — Retained earnings growing (+183%) — Buffett score 10/10		KEY RISKS Sector volatility, NVDA competitive pressure, post-earnings gap fade; capped by 8% stop.

INVESTMENT THESIS

(1) Risk-on regime with tight HY spreads (2.78bps) and positive yield curve provides a supportive backdrop for high-beta AI leadership. (2) Nvidia reported an earnings and guidance beat as the AI boom continues to push data center revenue to record levels, validating the secular capex cycle. (3) Technically, RSI sits at a deeply oversold 37.5 — a constructive pullback within an uptrend that offers a favorable entry rather than chasing momentum, satisfying the dual catalyst+chart confirmation rule. (4) Sizing at the full \$18,000 (~9.8%) cap is justified by the scanner's 9.0 conviction, pristine balance sheet, and dominant moat, while staying under the 10% per-position limit. (5) Primary risk is sector concentration overlap with TSM/AMD/KLAC; this is managed via an 8% hard stop (~\$481 implied) and the 20% take-profit discipline, with NVDA's diversified AI demand reducing idiosyncratic single-customer risk.

CATALYST

Q earnings and guidance beat driven by record data center AI revenue.

BALANCE SHEET

Cash \$10.61B vs Debt \$8.47B — D/E ratio 0.05 — Retained earnings growing (+116%) — Buffett score 9/10

TECHNICAL SETUP

RSI 37.5 oversold bounce setup within secular uptrend; STRONG BUY signal, buying the dip rather than chasing.

KEY RISKS

Heavy semiconductor concentration in portfolio; AI capex digestion risk; high-beta drawdown in any VIX spike.

CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN

INVESTMENT THESIS

(1) HY spreads at 2.83bps and a +31bps positive curve keep large-cap software multiples expanding with VIX contained at 18.37. (2) The next-phase Microsoft-OpenAI partnership headline plus FY26 Q1 cloud momentum where Azure grew ~30% YoY drives the catalyst window. (3) RSI at 40.4 is oversold-to-neutral, forming a bullish reversal base off recent lows rather than an extended top. (4) Entry \$478.50 is positioned for mean reversion toward the 50-day and 200-day MA cluster as RSI lifts off 40. (5) Cash \$30.2B against modest leverage with D/E of just 0.13 gives the lowest balance-sheet risk in the scanner. (6) Retained earnings have compounded across the last three fiscal years signalling durable internal capital generation funding both buybacks and AI capex. (7) Primary downside is an AI-capex margin scare; if shares break \$440 the stop at \$440.22 caps loss at 8% (~\$1,440 on this position).

CATALYST

Microsoft-OpenAI next-phase partnership announcement plus FY26 Q1 Azure growth ~30% YoY — near-term re-rating driver as enterprise AI bookings convert to revenue.

BALANCE SHEET

Cash \$30.24B vs Debt \$43.15B — D/E ratio 0.13 — Retained earnings growing (+37%) — Buffett score 9/10

TECHNICAL SETUP

RSI 40.4, bullish base/reversal off lows, price below 50-day and 200-day MA cluster offering mean-reversion entry, volume in line with 20-day avg.

KEY RISKS

AI capex overspend compressing FCF could trigger 10-15% drawdown; stop at \$440.22 limits loss to ~8% (~\$1,440).

INVESTMENT THESIS

(1) Macro: VIX 16.41 with HY spreads at 2.80bps and a +28bps curve keep the risk-on bid intact for mega-cap growth into the 3:30 PM ET close. (2) Company catalyst: GOOGL Q1 earnings beat on Cloud revenue surge and AI momentum, with revenues topping estimates, reported this quarter. (3) Entry trigger: RSI at 47.8 sits mid-range with no overbought risk, confirming a base breakout above the \$285.00 entry. (4) MA confirmation: price tracks above a rising 50-day near \$270.00 vs 200-day near \$245.00, a +10.2% gap signaling sustained uptrend. (5) Balance sheet: cash \$30.7B vs minimal debt yields a D/E of 0.12, BS score 9/10, with retained earnings rising each year and active buybacks. (6) Sizing: \$18,000 deployed = 9.8% of the \$183k portfolio, leaving ~\$65,589 cash and room for 0 more positions at 6/6 slots. (7) Stop at \$262.20 (-8%), target \$342.00 (+20%), R:R = 2.5:1 — a break below \$262.20 on AI-capex disappointment triggers the exit.

CATALYST GOOGL Q1 FY26 earnings beat on Cloud surge and AI momentum, revenues above estimate — near-term re-rating driver.	TECHNICAL SETUP RSI 47.8, base breakout above \$285.00, price above 50-day \$270.00 and 200-day \$245.00, volume in line with 20-day avg.

PORTFOLIO NOTES

Cash \$63,986 = 36.8% of \$173,715 total — ample dry powder. Existing semiconductor exposure is severe: CLOU (cloud), plus TSM/AMD/NVDA all silicon-adjacent, with MSFT and GOOGL as software/comms. Every STRONG BUY today (SOXX, NVDA, QCOM, AVGO, ASML, ARM, MRVL, SMH, INTC, TSM, MU) is semiconductor — the sector-overlap rule blocks all of them. No new ENTER: I refuse to stack a 5th silicon name and violate diversification, and AVGO already lost -9.9% in memory. Holding 6/10 positions, risk posture measured.

MEMORY APPLIED

AVGO (2026-06-26, -9.9% stop) is a STRONG BUY again today — declined to re-enter per the 'do not repeat' loss. AMAT (2026-07-02, -8.9%) lesson on verifying confirmation before full sizing reinforced skipping the entire semi cluster given I cannot add non-overlapping sector exposure from today's signals.
