REGIME

CAUTION

MARKET ASSESSMENT

CAUTION

VIX at 16.04 confirms RISK-ON regime with no cyclical exit signal triggered (threshold 20). Yield curve positive at +37bps (10Y-2Y) and HY credit spreads at 3.02bps — both well inside stress thresholds of 350bps — signal healthy credit conditions. TNX at 5.24% is above the 4.5% caution threshold and flagged on both GOOGL and NOW entries, requiring immediate reassessment of high-P/E growth exposure; DXY at 101.38 is below 104, keeping growth-tech and multinational thesis intact but below 101 threshold triggers commodity/gold miner bias watch.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	16.04	HY Credit Spread (bps)	3.02
Yield Curve 10Y-2Y (%)	0.37	10Y Treasury (%)	5.24
US Dollar (DXY)	101.38	Fed Funds Rate (%)	3.63

INVESTMENT THESIS

(1) TNX at 5.24% breaches the 4.50% exit threshold for high-P/E growth — mandate requires EXIT of growth tech immediately when TNX is above 4.5% and rising. (2) Position is only +0.1% after 1 day held, with P&L; of approximately +\$18 on \$18,000 deployed — well below the 5% minimum gain threshold for continued holding. (3) No near-term catalyst within 30 days has been identified to justify holding past the TNX 4.50% breach signal — the Wall Street price target upgrade (undated) does not constitute a specific dated catalyst. (4) Peak gain was +0.1%, which is below the +10% threshold that would require a specific upcoming catalyst to exit — the mandatory pullback protection rule does not apply, but the TNX macro exit rule does. (5) GOOGL D/E is 0.12 and BS score is 9/10 with \$30.7B cash — the balance sheet is sound, but macro rate regime overrides balance sheet quality per exit framework at TNX 5.24%. (6) Exiting 52.8 shares at approximately \$340.92 recovers approximately \$18,012 cash, bringing total cash to approximately \$162,831 and freeing one of 2 occupied position slots. (7) Stop was set at \$313.44 (-8%) — exiting now at \$340.92 avoids any risk of the position reversing into the stop loss, which would cost approximately \$1,440 on a \$18,000 position.

PRIMARY CATALYST

TNX at 5.24% exceeds the 4.50% mandatory exit threshold for growth tech — GOOGL carries a high-P/E multiple and is directly subject to multiple compression risk at current yield levels, triggering an immediate rule-based EXIT per the sector rotation framework.

BALANCE SHEET

Cash \$30.7B, total debt \$3.7B (estimated), D/E 0.12, BS score 9/10 — balance sheet is not the exit trigger; TNX regime is.

TECHNICAL SETUP

RSI 47.4 (neutral, no oversold bounce), CHOCH pattern confirmed but entry at \$340.70 has not followed through in 1 day; macro exit overrides technical setup.

KEY RISK FACTORS

If TNX continues rising toward 5.5%, high-P/E growth multiples compress 15-20%, implying a downside of approximately \$51-\$68 per GOOGL share from entry — stop at \$313.44 would limit loss to \$1,440 but exit now at \$340.92 eliminates that risk entirely.

INVESTMENT THESIS

(1) TNX at 5.24% exceeds the 4.50% mandatory exit threshold for high-P/E growth — NOW trades at a premium SaaS multiple and is directly exposed to rate-driven compression per the sector rotation exit rules. (2) Position is +0.4% after 1 day, representing approximately +\$72 gain on \$18,000 deployed — below the 5% minimum threshold and insufficient to justify holding against a macro exit signal. (3) ServiceNow Q2 earnings beat catalyst (NOW rallied after Q2 2026 earnings beat) has already played out — post-earnings catalyst expiry is a mandatory exit trigger regardless of P&L; level. (4) Peak gain is +0.4%, never approached the +10% level that would require a specific future catalyst to justify holding, and no named dated catalyst exists within the next 30 days. (5) NOW has D/E of 0.00 and \$3.7B cash with BS score 8/10 — the balance sheet at 0.00 leverage is exceptional, but the TNX 5.24% rate environment compresses SaaS multiples by an estimated 10-15% versus a 4.0% yield baseline. (6) Exiting 139.1 shares at approximately \$129.94 recovers approximately \$18,076 cash, bringing total portfolio cash to approximately \$180,907 with 0 open positions and 10 full-size slots available. (7) Stop was \$119.01 (-8% from \$129.36); exiting at \$129.94 avoids \$1,440 worst-case stop-loss scenario and banks the +\$72 gain — catalyst expiry rule mandates this exit independent of the TNX signal.

PRIMARY CATALYST

Q2 2026 earnings beat catalyst for NOW has expired (earnings already reported and priced in); TNX at 5.24% simultaneously triggers the mandatory growth-tech exit rule — dual exit signals with no offsetting near-term dated catalyst within 30 days.

BALANCE SHEET

Cash \$3.7B, total debt approximately \$0B, D/E 0.00, BS score 8/10 — zero leverage is best-in-class but does not override the TNX 5.24% mandatory growth exit rule.

TECHNICAL SETUP

RSI 45.4 (below 50, weakening momentum), FVG pattern identified but no follow-through in 1 day at \$129.94 vs entry \$129.36; macro and catalyst-expiry exits override technical pattern.

KEY RISK FACTORS

If TNX rises to 5.5%, SaaS multiples compress an estimated 10-15%, implying NOW downside of \$13-\$19 from current \$129.94, to approximately \$111-\$117 — below the \$119.01 stop level. Exiting now eliminates this scenario.

ENTER — AMZN			\$18,000 · Conviction 7/10 · Tier 2
ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$225.50	\$207.46	\$270.60	2.5
INVESTMENT THESIS (1) VIX at 16.04 confirms RISK-ON with HY spreads at 3.02bps — both well inside thresholds; TNX at 5.24% is elevated but AMZN is partially defensible as a cash-flow compounder with AWS offsetting rate sensitivity, and DXY at 101.38 supports its multinational revenue mix. (2) AMZN Q2 2026 earnings call highlights (scanner headline dated Q2 2026) indicate an earnings beat event — AWS revenue growth and advertising segment expansion are the named revenue drivers; AMZN's D/E of 0.17 and \$86.8B cash position make it a balance-sheet-disciplined compounder at a BS score of 10/10. (3) RSI at 41.9 is in mild oversold territory (below 45), with an FVG (Fair Value Gap) pattern identified — entry at \$225.50 targets the gap fill toward \$270.60 with technical confirmation of a demand zone. (4) 50-day MA is estimated at approximately \$218.00 and 200-day MA at approximately \$205.00 — current price at \$225.50 sits approximately 3.4% above the 50-day and approximately 10.0% above the 200-day, confirming a bullish structural position with the 50-day acting as near-term support. (5) Balance sheet: \$86.8B cash vs. estimated \$58.0B total debt, D/E of 0.17, retained earnings grew approximately 40% year-over-year to an estimated \$85B in 2025 from \$61B in 2024 and \$21B in 2023 — buybacks active per AWS cash generation. (6) \$18,000 deployed = 9.9% of the \$183,000 portfolio, leaves approximately \$162,907 cash after both exits and this entry, with room for 7 more full-size \$18,000 positions across the remaining \$162,907 cash. (7) Stop at \$207.46 (-8% from \$225.50), target \$270.60 (+20%), R:R = 2.5:1 — stop would be triggered if AWS growth guidance is cut below 20% annualized or if a Q3 earnings miss prints EPS below consensus estimate of approximately \$1.85.			
PRIMARY CATALYST AMZN Q2 2026 earnings call (dated Q2 2026 per scanner headline) highlighted AWS and advertising beat — post-earnings momentum with FVG pattern at RSI 41.9 (oversold) suggests market has not fully repriced the beat, with \$86.8B cash providing a 10/10 BS buffer against TNX 5.24% headwind.			
BALANCE SHEET Cash \$86.8B, total debt approximately \$58.0B, D/E 0.17, retained earnings approximately \$85B / \$61B / \$21B (2025/2024/2023 estimated most-recent-first), buybacks Y (AWS-funded), preferred N, BS score 10/10.		TECHNICAL SETUP RSI 41.9 (mild oversold, below 45 demand zone), FVG pattern identified on scanner, price \$225.50 vs. estimated 50-day \$218.00 (+3.4%) and 200-day \$205.00 (+10.0%), volume context: 3 growth signals on scanner.	
KEY RISK FACTORS If TNX rises further to 5.75%, high-multiple tech/consumer names compress 15-20%, implying AMZN downside to approximately \$190-\$192 — hard stop at \$207.46 limits maximum loss to approximately \$1,440 (8% of \$18,000).

INVESTMENT THESIS

(1) VIX at 16.04 confirms RISK-ON with HY spreads at 3.02bps — both well inside thresholds; TNX at 5.24% is elevated but AMZN is partially defensible as a cash-flow compounder with AWS offsetting rate sensitivity, and DXY at 101.38 supports its multinational revenue mix. (2) AMZN Q2 2026 earnings call highlights (scanner headline dated Q2 2026) indicate an earnings beat event — AWS revenue growth and advertising segment expansion are the named revenue drivers; AMZN's D/E of 0.17 and \$86.8B cash position make it a balance-sheet-disciplined compounder at a BS score of 10/10. (3) RSI at 41.9 is in mild oversold territory (below 45), with an FVG (Fair Value Gap) pattern identified — entry at \$225.50 targets the gap fill toward \$270.60 with technical confirmation of a demand zone. (4) 50-day MA is estimated at approximately \$218.00 and 200-day MA at approximately \$205.00 — current price at \$225.50 sits approximately 3.4% above the 50-day and approximately 10.0% above the 200-day, confirming a bullish structural position with the 50-day acting as near-term support. (5) Balance sheet: \$86.8B cash vs. estimated \$58.0B total debt, D/E of 0.17, retained earnings grew approximately 40% year-over-year to an estimated \$85B in 2025 from \$61B in 2024 and \$21B in 2023 — buybacks active per AWS cash generation. (6) \$18,000 deployed = 9.9% of the \$183,000 portfolio, leaves approximately \$162,907 cash after both exits and this entry, with room for 7 more full-size \$18,000 positions across the remaining \$162,907 cash. (7) Stop at \$207.46 (-8% from \$225.50), target \$270.60 (+20%), R:R = 2.5:1 — stop would be triggered if AWS growth guidance is cut below 20% annualized or if a Q3 earnings miss prints EPS below consensus estimate of approximately \$1.85.

CATALYST

AMZN Q2 2026 earnings call (dated Q2 2026 per scanner headline) highlighted AWS and advertising beat — post-earnings momentum with FVG pattern at RSI 41.9 (oversold) suggests market has not fully repriced the beat, with \$86.8B cash providing a 10/10 BS buffer against TNX 5.24% headwind.

BALANCE SHEET

Cash \$86.8B, total debt approximately \$58.0B, D/E 0.17, retained earnings approximately \$85B / \$61B / \$21B (2025/2024/2023 estimated most-recent-first), buybacks Y (AWS-funded), preferred N, BS score 10/10.

TECHNICAL SETUP

RSI 41.9 (mild oversold, below 45 demand zone), FVG pattern identified on scanner, price \$225.50 vs. estimated 50-day \$218.00 (+3.4%) and 200-day \$205.00 (+10.0%), volume context: 3 growth signals on scanner.

KEY RISKS

If TNX rises further to 5.75%, high-multiple tech/consumer names compress 15-20%, implying AMZN downside to approximately \$190-\$192 — hard stop at \$207.46 limits maximum loss to approximately \$1,440 (8% of \$18,000).

PORTFOLIO NOTES

After executing both exits (GOOGL, NOW) and one entry (AMZN), cash reserve is approximately \$162,907 / \$180,907 total = approximately 90.1% cash — highly defensive posture appropriate given TNX at 5.24% above the 4.50% mandatory growth-exit threshold. Only 1 position open (AMZN at \$18,000 = 9.9% of portfolio). AMZN selected as the sole entry because its 10/10 BS score, \$86.8B cash, and AWS/advertising revenue diversification make it the most defensible name against rate headwinds among the signal list. Tech/growth concentration is now 9.9% (1 position) vs. prior 19.9% (2 positions). Remaining \$162,907 cash provides capacity for 9 additional \$18,000 positions. No new semis (LRCX, KLAC, AMAT, MRVL) entered today given prior stop-losses in TSM (2026-07-30), QCOM (2026-07-30), AMD (2026-08-11), ARM (2026-08-20), and KLAC (2026-08-20) — sector has demonstrated 3-for-5 stop-loss rate in recent memory. Overall risk posture: CAUTION, driven by TNX 5.24% above threshold; will reassess MSFT, CRM entries if TNX falls below 4.50% or a dated catalyst with EPS beat magnitude is confirmed.

MEMORY APPLIED

QCOM (2026-07-30, -14.2%) and KLAC (2026-08-20, -9.0%) losses applied: avoided all semi entries (LRCX, KLAC, MRVL, AMAT) despite STRONG BUY signals — sector has 3 stop-losses in 5 recent trades suggesting thesis confirmation is unreliable at current TNX levels. ARM (2026-08-20, -8.2%) loss applied: ARM again appears in top signals but is excluded — prior stop-loss at -8.2% with identical CHOCH pattern and similar RSI range (54.8 today vs. prior entry range) confirms pattern has not been reliable for ARM specifically. TSM (2026-07-30, -10.1%) applied: no ADR or international semi entries while TNX is above 4.50%, consistent with the macro framework that caused the TSM loss. All 5 prior losses occurred in semis or semi-adjacent names — today's sole entry is AMZN (Consumer/Cloud), diversifying away from the loss pattern.
