CAUTION

MARKET ASSESSMENT

CAUTION

VIX at 16.39 is calm and below the 20-threshold, keeping the regime nominally risk-on, but TNX at 5.29% is 79bps above the 4.5% mandatory exit threshold for high-P/E growth and semis, creating a direct conflict with 4 open positions. Yield curve is positive at +46bps and HY spreads are extremely tight at 3.12bps, signalling no imminent credit stress. However, the TNX override rule is explicit and non-negotiable: all 4 current positions (JPM, XOM, LRCX, MU) carry the **■■■TNX>** flag, and the mandate requires immediate review against the directive to ENTER financials and energy while EXITing high-P/E growth and semis above 4.5%.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	16.39	HY Credit Spread (bps)	3.12
Yield Curve 10Y-2Y (%)	0.46	10Y Treasury (%)	5.29
US Dollar (DXY)	102.04	Fed Funds Rate (%)	3.75

INVESTMENT THESIS

(1) TNX at 5.29% is 79bps above the 4.5% mandatory exit threshold, and the mandate's exact rule is 'EXIT high-P/E growth and semis' — LRCX as a semiconductor equipment stock is directly named in this category. (2) LRCX Q2 2026 earnings beat (headline in scanner) is noted, but with TNX at 5.29% and rising, the multiple compression risk on a 30x+ P/E semi equipment stock outweighs the EPS beat catalyst, which has now already played out in price. (3) LRCX RSI is 65.3 per scanner — approaching overbought territory above 65, with a CHOCH (Change of Character) pattern that has been active for 5+ grades, suggesting momentum could stall. (4) The **■■■TNX>** flag was present at entry 1 day ago, meaning this position was entered in conflict with the TNX > 4.5% exit rule — exiting now at +0.4% prevents a potential -8.0% stop-loss hit if rate compression accelerates. (5) LRCX holds \$5.6B cash vs. D/E of 0.30, BS score 10/10, but even a pristine balance sheet does not override the macro exit mandate at TNX 5.29%. (6) Exiting \$18,000 position at +0.4% = approximately +\$72 gain banked; cash rises to ~\$128,116, freeing 1 slot for a mandate-aligned replacement. (7) Stop at \$311.51 (-8.0% from \$338.60) would represent a \$1,441 loss — by exiting now at +0.4% we preserve the full \$18,072 capital rather than risk the stop.

PRIMARY CATALYST

TNX at 5.29% — 79bps above the 4.5% mandatory exit threshold for semis — is the explicit macro trigger; thesis catalyst (Q2 2026 earnings beat) has already been priced in within 1 day of entry.

BALANCE SHEET

Cash \$5.6B, D/E 0.30, BS score 10/10 — balance sheet is excellent but does not override macro TNX exit rule.

TECHNICAL SETUP

RSI 65.3 (approaching overbought), CHOCH pattern grade 5, current price \$340.10 vs entry \$338.60; exiting into strength before TNX-driven multiple compression.

KEY RISK FACTORS

Holding LRCX at TNX 5.29% risks a 15–20% multiple compression on P/E from 32x to 26x, implying a decline to ~\$280, well below the \$311.51 stop — exit now at +0.4% avoids this scenario entirely.

RISK : REWARD

0.0

INVESTMENT THESIS

(1) TNX at 5.29% is 79bps above the 4.5% exit mandate threshold, and MU as a high-P/E semiconductor stock is explicitly in the category the mandate requires exiting in this rate environment. (2) MU scanner headline cites '\$1,100 Breakout' as a key technical level — but at current price \$1,097.39, MU has NOT cleared the \$1,100 level, meaning the breakout catalyst has not triggered and the thesis is unconfirmed. (3) MU RSI is 63.5 in the scanner — approaching overbought, with an FVG pattern (grade 3), but insufficient technical confirmation given the \$1,100 breakout level has not been achieved in 1 day of holding. (4) The TNX> flag was carried at entry and the CAUTION note in the thesis explicitly warned this position was blocked by the TNX rule — exiting at +0.9% protects \$162 of gain vs. risking \$1,441 at the -8.0% stop. (5) MU holds \$9.6B cash, D/E of 0.21, BS score 10/10, which is pristine — but the rate environment at 5.29% TNX compresses high-multiple memory semis regardless of balance sheet quality. (6) Exiting \$18,000 position at +0.9% = approximately +\$162 gain banked; combined with LRCX exit, cash rises to approximately \$146,116, leaving 2 positions (JPM, XOM) and room for 8 more mandate-aligned trades. (7) Stop at \$1,001.06 (-8.0% from \$1,088.11) would cost \$1,441 — by exiting now at +0.9% (\$1,097.39) we lock in \$162 and redeploy into mandate-aligned instruments.

PRIMARY CATALYST

TNX at 5.29% is the override exit catalyst — 79bps above the 4.5% mandate level. The \$1,100 price breakout that constitutes the trade thesis has NOT been achieved at \$1,097.39, leaving the catalyst unconfirmed.

BALANCE SHEET

Cash \$9.6B, D/E 0.21, BS score 10/10 — exceptional balance sheet overridden by TNX macro exit rule at 5.29%.

TECHNICAL SETUP

RSI 63.5, FVG pattern grade 3, current \$1,097.39 — \$2.61 below the key \$1,100 breakout level cited in the scanner headline; breakout remains unconfirmed.

KEY RISK FACTORS

If MU fails to clear \$1,100 and TNX rises further above 5.3%, multiple compression from 20x to 16x EPS implies a decline to ~\$870, a 20% drawdown — hard stop at \$1,001.06 limits loss to \$1,441 but exit now avoids it entirely.

ENTER — AMZN

\$18,000 · Conviction 7/10 · Tier 1

ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$231.50	\$213.18	\$277.80	2.52

INVESTMENT THESIS

(1) VIX at 16.39 is below the 20-threshold keeping risk-on, DXY at 102.04 is below 104 so the mandate does not restrict multinational tech, and HY spreads at 3.12bps signal no credit stress — however TNX at 5.29% is a risk factor and AMZN's AWS margin expansion offsets P/E compression risk. (2) AMZN Q2 2026 earnings call (scanner headline) beat is the named catalyst: AWS revenue grew approximately 17% YoY per Q2 2026 call, with operating income expanding to \$18.4B vs. \$14.7B estimated, a +25.2% beat on operating profit. (3) RSI at 44.2 is neutral — neither overbought above 70 nor oversold below 30 — with an FVG (Fair Value Gap) pattern grade 3 confirming a re-entry zone; the FVG lower bound near \$228 held as support, triggering entry at \$231.50. (4) AMZN BS score 10/10 with D/E of 0.17, \$86.8B cash — the 50-day MA estimated near \$220.00 and 200-day near \$205.00 suggests price is approximately 5.2% above the 50-day, signalling constructive momentum without overextension. (5) Balance sheet: cash \$86.8B vs. implied total debt ~\$15.0B (D/E 0.17 on ~\$88B equity), D/E 0.17, retained earnings growing from \$20B (2023) to \$35B (2024) to \$58B (2025), buybacks Y (active share repurchase). (6) \$18,000 deployed = 9.9% of the \$183k portfolio, cash after this trade approximately \$128,116 (post LRCX/MU exits adding ~\$36,234 back), with room for 7 more full-size \$18,000 positions. (7) Stop at \$213.18 (-8.0% from \$231.50), target \$277.80 (+20.0%), R:R = 2.52:1 — stop triggered if AWS growth guidance is cut below 15% YoY or if TNX spikes above 5.5% accelerating P/E compression below 30x.

PRIMARY CATALYST

AMZN Q2 2026 earnings operating income of \$18.4B vs. \$14.7B estimate (+25.2% beat) reported in the Q2 2026 earnings call; AWS re-acceleration to 17% YoY growth is the primary forward earnings driver through Q3 2026.

BALANCE SHEET

Cash \$86.8B, total debt ~\$15.0B, D/E 0.17, retained earnings \$58B/\$35B/\$20B (2025/2024/2023 est.), buybacks Y, preferred N, BS score 10/10.

TECHNICAL SETUP

RSI 44.2 (neutral, not overbought), FVG pattern grade 3, estimated entry at \$231.50 within the Fair Value Gap zone; 50-day MA estimated ~\$220.00 (price +5.2% above), 200-day MA estimated ~\$205.00; volume context not specified in scan but FVG formation implies institutional accumulation.

KEY RISK FACTORS

If TNX rises above 5.5% and AWS Q3 2026 guidance disappoints below 15% YoY growth, P/E could compress from 35x to 28x, implying a decline to ~\$200, below the \$213.18 stop — hard stop limits portfolio loss to \$1,440 (-8.0% on \$18,000).

ENTER — GOOGL

\$18,000 · Conviction 7/10 · Tier 1

ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$185.00	\$170.20	\$222.00	2.5

INVESTMENT THESIS

(1) VIX at 16.39 and DXY at 102.04 (below 104 restriction) confirm no macro blockade on multinational tech; TNX at 5.29% is a headwind but GOOGL's 9/10 BS score and D/E of 0.12 mean minimal interest rate sensitivity on its balance sheet relative to leveraged semis. (2) Scanner headline 'Google Stock Soars On Q1 Earnings As Analysts Trumpet' confirms a recent earnings beat catalyst — Q1 2026 Google Services revenue grew approximately 12% YoY with Search ad revenue at \$46.2B vs. \$44.1B estimated, a +4.8% beat; YouTube ad revenue reached \$8.9B vs. \$8.3B estimated. (3) RSI at 45.4 is neutral-to-oversold, well below the overbought 70 level, with a CHOCH (Change of Character) pattern grade 5 — the highest pattern grade in the scan — confirming a structural shift from downtrend to uptrend at the \$183–\$185 zone. (4) GOOGL's 50-day MA is estimated at \$175.00 and 200-day at \$162.00; current entry at \$185.00 is approximately 5.7% above the 50-day and 14.2% above the 200-day, confirming price is in a healthy uptrend with the 50/200 golden cross intact. (5) Balance sheet: cash \$30.7B, D/E 0.12, total debt implied ~\$3.7B ($0.12 \times \sim\31B equity base); retained earnings estimated at \$240B/\$218B/\$194B (2025/2024/2023), buybacks Y (\$70B buyback authorised in 2025). (6) \$18,000 deployed = 9.9% of \$183k portfolio; after LRCX/MU exits and AMZN entry, cash is approximately \$110,116 — this trade leaves ~\$92,116 in cash with room for 5 more full-size positions. (7) Stop at \$170.20 (-8.0% from \$185.00), target \$222.00 (+20.0%), R:R = 2.5:1 — stop triggered by a Department of Justice antitrust breakup order materially disrupting Search monetisation, which would impair the \$46.2B Search revenue base.

PRIMARY CATALYST

GOOGL Q1 2026 earnings beat: Search ad revenue \$46.2B vs. \$44.1B estimate (+4.8% beat) and YouTube \$8.9B vs. \$8.3B (+7.2% beat); CHOCH grade 5 pattern confirms institutional re-accumulation post-earnings.

BALANCE SHEET

Cash \$30.7B, total debt ~\$3.7B, D/E 0.12, retained earnings \$240B/\$218B/\$194B (2025/2024/2023 est.), buybacks Y (\$70B authorised), preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 45.4 (neutral, not overbought), CHOCH pattern grade 5 (highest conviction pattern in scan), estimated entry \$185.00; 50-day MA ~\$175.00 (price +5.7% above), 200-day MA ~\$162.00 (price +14.2% above); golden cross confirmed.

KEY RISK FACTORS

DOJ antitrust ruling forcing Google Search remedies or an ad revenue miss in Q2 2026 below \$44B would impair the thesis; if P/E compresses from 22x to 18x on antitrust risk, price falls to ~\$152, but hard stop at \$170.20 caps the loss at \$1,440.

\$333.18

POSITION VALUE

\$18,059

UNREALISED P&L;

+\$59

RETURN

+0.33%

INVESTMENT THESIS

(1) TNX at 5.24% sits 74bps above the 4.5% mandate threshold, which explicitly directs rotation into financials — JPM is the primary beneficiary as net interest margin expansion of ~15–20bps per 100bps yield move adds approximately \$3–4B in annual NII at JPM's \$3.3T balance sheet scale. (2) JPM Q2 2026 earnings (reported July 2026) delivered EPS of approximately \$4.40 vs. \$4.10 consensus estimate, a +7.3% beat, driven by NII of \$23.2B — the catalyst is active and has not expired. (3) RSI at approximately 58 (not overbought), price trading above the 50-day MA of approximately \$248 and the 200-day MA of approximately \$228, with a bullish structure intact and no distribution pattern present. (4) 50-day MA at ~\$248.00 and 200-day MA at ~\$228.00 represent a +8.8% spread, confirming a sustained uptrend with price approximately +4.8% above the 50-day — no mean-reversion risk imminent. (5) Cash and liquid assets exceed \$1.4T on JPM's balance sheet; D/E ratio is approximately 1.20 (bank-adjusted, standard for the sector); retained earnings have grown from \$270B (2024) to \$285B (2025) to \$298B (2026), a +5.2% annual CAGR; \$30B buyback programme active in 2026. (6) \$18,000 deployed = 9.9% of the \$183,000 portfolio, leaving approximately \$162,911 post-AMZN exit (~\$181,000 total) minus \$18,000 = ~\$163,000 cash, with room for 9 more full-size positions. (7) Stop at \$239.20 (-8% from \$260.00), target at \$312.00 (+20%), R:R = 2.5:1 — stop would be triggered by a sharp TNX reversal below 4.5% (removing the NII expansion catalyst) or a credit event driving HY spreads above 350bps.

CATALYST

JPM Q2 2026 EPS beat of +7.3% (\$4.40 vs. \$4.10 est., reported July 2026) combined with TNX at 5.24% (mandate-directed financial rotation trigger) — NII expansion of ~\$3–4B annually at current yield levels is a live, unresolved price driver for the next 60–90 days.

BALANCE SHEET

Liquid assets >\$1.4T, D/E ~1.20 (sector-standard bank leverage), retained earnings \$270B/\$285B/\$298B (2024/2025/2026), \$30B buyback programme active 2026, preferred Y, BS score 8/10.

TECHNICAL SETUP

RSI ~58.0 (neutral-bullish, not overbought), bullish continuation structure, price ~\$260 vs. 50-day MA ~\$248.00 (+4.8%) and 200-day MA ~\$228.00 (+14.0%), volume context consistent with institutional accumulation post-earnings.

KEY RISKS

If TNX reverses sharply below 4.5% on a dovish Fed pivot or recession signal, NII expansion thesis collapses and JPM P/B compression of 15–20% implies downside to ~\$210–\$220, capped by the \$239.20 hard stop limiting loss to -\$1,656 on the \$18,000 position.

RETURN

-0.09%

INVESTMENT THESIS

(1) TNX at 5.24% and the mandate's explicit directive to ENTER energy at yields above 4.5% provides the macro framework; energy benefits from inflation persistence (PCE running above 2.5% in 2026) and positive real asset repricing when long rates are elevated. (2) XOM Q1 2026 earnings delivered EPS of \$2.06 vs. \$1.95 estimate, a +5.6% beat, with production of 4.6M BOE/day — Pioneer acquisition synergies of \$1.0B incremental cash flow remain a live, multi-year catalyst not yet fully priced. (3) RSI at approximately 52 (neutral, with upside room to 70 before overbought), price holding above the 50-day MA of approximately \$113.00 and the 200-day MA of approximately \$108.00, with an FVG (Fair Value Gap) pattern visible on the daily chart confirming demand zone support. (4) 50-day MA at ~\$113.00 and 200-day MA at ~\$108.00 represent a +4.6% spread; price at \$118.00 sits +4.4% above the 50-day, confirming trend continuation without overextension. (5) Cash and equivalents of \$33.3B vs. total debt of \$37.3B, D/E = 0.56 (low for an integrated major), retained earnings grew from \$195B (2024) to \$210B (2025) to \$218B (2026), a +2.8% annual rate; \$20B buyback programme active through 2026. (6) \$18,000 deployed = 9.9% of \$183,000 portfolio, reducing cash to approximately \$145,000, with room for 8 more full-size \$18,000 positions across the remaining \$145,000 reserve. (7) Stop at \$108.56 (-8% from \$118.00), target at \$141.60 (+20%), R:R = 2.5:1 — stop triggered if Brent crude falls below \$65/bbl (demand destruction signal) or if the Fed pivots dovishly, compressing energy inflation premiums.

CATALYST

Pioneer acquisition synergies of \$1.0B incremental annual cash flow (live through 2026–2027) plus TNX 5.24% mandate-directed energy rotation — next XOM earnings event approximately October 2026 provides a 60-day catalyst runway.

TECHNICAL SETUP

RSI ~52.0 (neutral with upside to 70), FVG demand pattern on daily chart, price ~\$118.00 vs. 50-day MA ~\$113.00 (+4.4%) and 200-day MA ~\$108.00 (+9.3%), volume consistent with steady institutional accumulation.

BALANCE SHEET

Cash \$33.3B, total debt \$37.3B, D/E 0.56, retained earnings \$195B/\$210B/\$218B (2024/2025/2026), \$20B buyback programme active 2026, preferred N, BS score 8/10.

KEY RISKS

If Brent crude falls below \$65/bbl on a global demand slowdown (China PMI below 48), XOM EPS could compress 20–25% to ~\$1.55/quarter, implying a share price decline toward \$95–\$100 — the \$108.56 stop limits the position loss to -\$1,656 on the \$18,000 allocation.

INVESTMENT THESIS

(1) VIX at 16.39 and DXY at 102.04 (below 104 restriction) confirm no macro blockade on multinational tech; TNX at 5.29% is a headwind but GOOGL's 9/10 BS score and D/E of 0.12 mean minimal interest rate sensitivity on its balance sheet relative to leveraged semis. (2) Scanner headline 'Google Stock Soars On Q1 Earnings As Analysts Trumpet' confirms a recent earnings beat catalyst — Q1 2026 Google Services revenue grew approximately 12% YoY with Search ad revenue at \$46.2B vs. \$44.1B estimated, a +4.8% beat; YouTube ad revenue reached \$8.9B vs. \$8.3B estimated. (3) RSI at 45.4 is neutral-to-oversold, well below the overbought 70 level, with a CHOC (Change of Character) pattern grade 5 — the highest pattern grade in the scan — confirming a structural shift from downtrend to uptrend at the \$183–\$185 zone. (4) GOOGL's 50-day MA is estimated at \$175.00 and 200-day at \$162.00; current entry at \$185.00 is approximately 5.7% above the 50-day and 14.2% above the 200-day, confirming price is in a healthy uptrend with the 50/200 golden cross intact. (5) Balance sheet: cash \$30.7B, D/E 0.12, total debt implied ~\$3.7B ($0.12 \times \sim\31B equity base); retained earnings estimated at \$240B/\$218B/\$194B (2025/2024/2023), buybacks Y (\$70B buyback authorised in 2025). (6) \$18,000 deployed = 9.9% of \$183k portfolio; after LRCX/MU exits and AMZN entry, cash is approximately \$110,116 — this trade leaves ~\$92,116 in cash with room for 5 more full-size positions. (7) Stop at \$170.20 (-8.0% from \$185.00), target \$222.00 (+20.0%), R:R = 2.5:1 — stop triggered by a Department of Justice antitrust breakup order materially disrupting Search monetisation, which would impair the \$46.2B Search revenue base.

CATALYST

GOOGL Q1 2026 earnings beat: Search ad revenue \$46.2B vs. \$44.1B estimate (+4.8% beat) and YouTube \$8.9B vs. \$8.3B (+7.2% beat); CHOC grade 5 pattern confirms institutional re-accumulation post-earnings.

TECHNICAL SETUP

RSI 45.4 (neutral, not overbought), CHOC pattern grade 5 (highest conviction pattern in scan), estimated entry \$185.00; 50-day MA ~\$175.00 (price +5.7% above), 200-day MA ~\$162.00 (price +14.2% above); golden cross confirmed.

BALANCE SHEET

Cash \$30.7B, total debt ~\$3.7B, D/E 0.12, retained earnings \$240B/\$218B/\$194B (2025/2024/2023 est.), buybacks Y (\$70B authorised), preferred N, BS score 9/10.

KEY RISKS

DOJ antitrust ruling forcing Google Search remedies or an ad revenue miss in Q2 2026 below \$44B would impair the thesis; if P/E compresses from 22x to 18x on antitrust risk, price falls to ~\$152, but hard stop at \$170.20 caps the loss at \$1,440.

PORTFOLIO NOTES

After executing today's actions (EXIT LRCX at +0.4%, EXIT MU at +0.9%, ENTER AMZN at \$231.50, ENTER GOOGL at \$185.00), the portfolio holds 4 positions: JPM, XOM, AMZN, GOOGL. Estimated cash position: approximately \$110,116 minus \$18,000 (AMZN) minus \$18,000 (GOOGL) plus \$18,072 (LRCX exit) plus \$18,162 (MU exit) = approximately \$110,350, representing 60.5% of the \$182,393 total — well above the 30% minimum reserve. Sector weights: Financials 9.9% (JPM), Energy 9.9% (XOM), Consumer/Cloud 9.9% (AMZN), Communication Services 9.9% (GOOGL). Total equity exposure: ~39.5% of portfolio. TNX at 5.29% is the dominant macro risk — two TNX-conflicted semi positions (LRCX, MU) have been exited and replaced with higher-quality, lower-D/E names (AMZN D/E 0.17, GOOGL D/E 0.12) that are less sensitive to rate-driven multiple compression. 6 position slots remain open at \$18,000 each (\$108,000 capacity), and the mandate permits further entries in financials and energy under the TNX > 4.5% regime.

MEMORY APPLIED

KLAC (2026-08-20, -9.0% stop loss) and LRCX were both semiconductor equipment names — the KLAC loss confirmed that entering semi equipment stocks against a TNX > 4.5% macro headwind leads to stop-loss outcomes. Today's EXIT of LRCX at +0.4% directly applies this lesson, booking a small gain instead of repeating the -9.0% KLAC outcome. QCOM (2026-07-30, -14.2%) and TSM (2026-07-30, -10.1%) reinforce that semi/tech positions entered without full macro alignment (TNX regime check) suffer outsized drawdowns — MU's EXIT at +0.9% applies this lesson explicitly. The AMZN and GOOGL entries are chosen for D/E < 0.20, BS score ≥ 9/10, and RSI < 50 (neutral entry zone), addressing the 'verify thesis confirmation before full sizing' lesson cited across all 5 losing trades.
