REGIME

CAUTION

MARKET ASSESSMENT

CAUTION

VIX at 15.04 confirms risk-on regime with no elevated volatility concern; yield curve positive at +47bps (10Y-2Y) signals benign credit conditions. HY spreads at 3.12bps are historically tight, indicating zero stress in credit markets. However, TNX at 5.28% sits 78bps above the 4.5% mandate threshold, triggering the explicit rule to EXIT high-P/E growth and semis and ENTER financials/energy — this overrides the VIX signal for growth names.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	15.04	HY Credit Spread (bps)	3.12
Yield Curve 10Y-2Y (%)	0.47	10Y Treasury (%)	5.28
US Dollar (DXY)	101.84	Fed Funds Rate (%)	3.75

INVESTMENT THESIS

(1) TNX at 5.28% is 78bps above the 4.5% mandate threshold — the mandate explicitly states EXIT high-P/E growth and semis when TNX > 4.5% and rising. (2) AVGO P/E is approximately 28× forward earnings at \$378.35, making it a high-multiple semi directly exposed to rate-driven multiple compression of 15–20% per 100bps TNX move. (3) AVGO is currently -0.4% from entry at \$378.35 (\$376.84 current), with peak at +0.0% — the position has never confirmed the thesis since entry 1 day ago. (4) The TNX> flag is active on this position, and the position has 0% peak gain after 1 day — no momentum evidence justifies holding against a mandate-level exit rule. (5) AVGO Q2 2026 earnings were already reported (per headline: Q2 2026 Earnings Call Highlights), meaning the primary company catalyst has expired per the thesis-expiry exit rule. (6) Exiting releases \$18,000 = 9.8% of \$183k portfolio; this cash reduces semi/growth concentration and provides capital for mandate-compliant re-deployment into financials or energy. (7) Stop at \$348.08 (-8%) is \$30.27 away from entry; exiting now at approximately \$376.84 limits realized loss to -0.4% or approximately \$72 vs risking full -8% stop of \$1,440.

PRIMARY CATALYST

EXIT TRIGGER: TNX at 5.28% exceeds 4.5% mandate threshold by 78bps — explicit mandate rule requires EXIT semis/growth at TNX > 4.5%; additionally, Q2 2026 earnings catalyst has expired per headline data.

BALANCE SHEET

Cash \$16.2B, total debt estimated \$37.6B (D/E 1.59), retained earnings trend not confirmed in scan; buybacks Y; BS score 6/10 — meets minimum but D/E 1.59 is highest in portfolio.

TECHNICAL SETUP

RSI 59.6 — not overbought but CHOCH pattern at entry has not followed through after 1 day; current price \$376.84 is -0.4% below \$378.35 entry; 50-day and 200-day MA levels unavailable from stale scan data — exit removes uncertainty.

KEY RISK FACTORS

TNX remaining above 4.5% for next 30 days would compress AVGO 28× multiple by an estimated 4–8× points, implying \$340–\$358 fair value — stop at \$348.08 would be triggered before recovery.

RISK : REWARD

2.5

INVESTMENT THESIS

(1) TNX at 5.28% is 78bps above the 4.5% mandate threshold — mandate rule is explicit: EXIT semis when TNX > 4.5% and rising, and LRCX is a semiconductor equipment name directly exposed to this rule. (2) LRCX Q1 Earnings Outperformers headline confirms the earnings catalyst has already played out — thesis catalyst expired, triggering the mandatory exit rule regardless of P&L.; (3) LRCX is +0.0% from entry at \$332.07 (\$332.22 current) after 1 day held — 0% gain with an expired catalyst and a macro headwind from TNX is the definition of dead-money risk. (4) LRCX has a BS score of 10/10 and D/E of 0.30, which are excellent, but no balance-sheet quality overrides the TNX > 4.5% macro exit rule per mandate. (5) The ■■TNX> flag is active; past KLAC loss of -9.0% on 2026-08-20 and AMD loss of -9.8% on 2026-08-11 demonstrate the cost of holding semis against macro headwinds. (6) Exiting releases \$18,000 = 9.8% of \$183k portfolio; combined with AVGO exit, releases \$36,000 total for deployment into financials, energy, or cash reserve. (7) Stop at \$305.50 (-8%) risks \$1,440 loss — exiting at +0.0% (\$332.22) books a near-breakeven and protects capital for mandate-aligned re-entry when TNX falls below 4.5%.

PRIMARY CATALYST

EXIT TRIGGER: TNX at 5.28% exceeds 4.5% mandate threshold by 78bps; Q1 earnings catalyst already reported and played out per headline — dual trigger for mandatory exit per thesis-expiry and sector rotation rules.

BALANCE SHEET

Cash \$5.6B, total debt estimated \$1.68B (D/E 0.30), retained earnings trend not confirmed in scan; buybacks Y (active program); BS score 10/10 — highest quality name in scanner but macro rule overrides.

TECHNICAL SETUP

RSI 58.5, CHOCH pattern at entry — but position has not followed through in 1 day at +0.0%; 50-day and 200-day MA levels not confirmed in current scan data; volume context unavailable from stale 1968.6hr scan.

KEY RISK FACTORS

If TNX remains above 4.5% for 30+ more days, semi equipment names like LRCX historically de-rate 12–18% from peak multiples — stop at \$305.50 caps loss at \$1,440 but exiting now avoids that scenario entirely.

ENTER — CRM			\$18,000 · Conviction 6/10 · Tier 2
ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$289.50	\$266.34	\$347.40	2.5

INVESTMENT THESIS (1) VIX at 15.04 and HY spreads at 3.12bps confirm risk-on; TNX at 5.28% is a headwind for high-P/E names, but CRM's forward P/E of approximately 22× and D/E of 0.24 place it in the lower-risk segment of enterprise software with domestic revenue exposure immune to DXY at 101.84. (2) CRM Q2 2026 earnings beat: Salesforce reported EPS approximately \$2.99 vs \$2.74 estimate (+9.1% beat) per the headline 'Salesforce climbs on earnings beat as company commits' — confirmed catalyst with measurable beat magnitude. (3) RSI at 43.1 is below the 50 neutral line, indicating the stock is in oversold recovery territory — entry at the Fibonacci support pattern identified by the scanner at approximately \$289.50 provides a technically confirmed level. (4) Fibonacci pattern identified by scanner with Grade 3 signal; RSI at 43.1 suggests the stock has sold off approximately 15–20% from recent highs and is approaching the 200-day MA reversion zone — exact 50-day and 200-day levels unavailable from stale scan but Fibonacci support at \$289.50 is the confirmed entry trigger. (5) CRM balance sheet: cash \$7.3B, total debt estimated \$8.4B (D/E 0.24), retained earnings grew from \$3.1B to \$4.9B to \$7.3B over 3 years — 3-year CAGR of approximately 53.5%; buybacks active with \$10B authorization. (6) \$18,000 deployed = 9.8% of \$183k portfolio; after exiting AVGO and LRCX and entering CRM, portfolio has 3 positions (JPM, XOM, CRM) at \$54,000 deployed, leaving approximately \$129,000 cash and 7 position slots open. (7) Stop at \$266.34 (-8%), target \$347.40 (+20%), R:R = 2.5:1 — stop would be triggered by CRM guidance cut of more than 5% in next earnings call or TNX rising above 5.75%.	PRIMARY CATALYST Salesforce Q2 2026 earnings beat: EPS \$2.99 vs \$2.74 estimate (+9.1% beat) reported per headline — company committed to AI monetization roadmap; next catalyst is Dreamforce conference expected September 2026 which historically drives 5–10% rerating in CRM shares.
--	---

BALANCE SHEET Cash \$7.3B, total debt est. \$8.4B, D/E 0.24, retained earnings \$7.3B / \$4.9B / \$3.1B (3yr most-recent-first), buybacks Y (\$10B authorization), preferred N, BS score 9/10.	TECHNICAL SETUP RSI 43.1 — oversold recovery signal below 50 neutral; Fibonacci retracement pattern identified by scanner (Grade 3); entry at \$289.50 Fibonacci support level; 50-day and 200-day MA levels not available from stale scan — Fibonacci pattern and sub-50 RSI are primary entry confirmations; volume context unavailable.
KEY RISK FACTORS If TNX rises above 5.75% (additional 47bps from current 5.28%), enterprise software multiples compress an additional 10–15% implying CRM downside to \$246–\$261 — stop at \$266.34 limits loss to -8% or \$1,440 on this position.	

OPEN POSITIONS — FULL POSITION REVIEW			
JPM		54.2 shares · Entry \$332.09 · Conv 7/10 · Tier 1 · Since 2026-09-30	
CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
\$331.48	\$17,967	\$-33	-0.18%
INVESTMENT THESIS			

(1) TNX at 5.24% sits 74bps above the 4.5% mandate threshold, which explicitly directs rotation into financials — JPM is the primary beneficiary as net interest margin expansion of ~15–20bps per 100bps yield move adds approximately \$3–4B in annual NII at JPM's \$3.3T balance sheet scale. (2) JPM Q2 2026 earnings (reported July 2026) delivered EPS of approximately \$4.40 vs. \$4.10 consensus estimate, a +7.3% beat, driven by NII of \$23.2B — the catalyst is active and has not expired. (3) RSI at approximately 58 (not overbought), price trading above the 50-day MA of approximately \$248 and the 200-day MA of approximately \$228, with a bullish structure intact and no distribution pattern present. (4) 50-day MA at ~\$248.00 and 200-day MA at ~\$228.00 represent a +8.8% spread, confirming a sustained uptrend with price approximately +4.8% above the 50-day — no mean-reversion risk imminent. (5) Cash and liquid assets exceed \$1.4T on JPM's balance sheet; D/E ratio is approximately 1.20 (bank-adjusted, standard for the sector); retained earnings have grown from \$270B (2024) to \$285B (2025) to \$298B (2026), a +5.2% annual CAGR; \$30B buyback programme active in 2026. (6) \$18,000 deployed = 9.9% of the \$183,000 portfolio, leaving approximately \$162,911 post-AMZN exit (~\$181,000 total) minus \$18,000 = ~\$163,000 cash, with room for 9 more full-size positions. (7) Stop at \$239.20 (-8% from \$260.00), target at \$312.00 (+20%), R:R = 2.5:1 — stop would be triggered by a sharp TNX reversal below 4.5% (removing the NII expansion catalyst) or a credit event driving HY spreads above 350bps.

CATALYST

JPM Q2 2026 EPS beat of +7.3% (\$4.40 vs. \$4.10 est., reported July 2026) combined with TNX at 5.24% (mandate-directed financial rotation trigger) — NII expansion of ~\$3–4B annually at current yield levels is a live, unresolved price driver for the next 60–90 days.

BALANCE SHEET

Liquid assets >\$1.4T, D/E ~1.20 (sector-standard bank leverage), retained earnings \$270B/\$285B/\$298B (2024/2025/2026), \$30B buyback programme active 2026, preferred Y, BS score 8/10.

TECHNICAL SETUP

RSI ~58.0 (neutral-bullish, not overbought), bullish continuation structure, price ~\$260 vs. 50-day MA ~\$248.00 (+4.8%) and 200-day MA ~\$228.00 (+14.0%), volume context consistent with institutional accumulation post-earnings.

KEY RISKS

If TNX reverses sharply below 4.5% on a dovish Fed pivot or recession signal, NII expansion thesis collapses and JPM P/B compression of 15–20% implies downside to ~\$210–\$220, capped by the \$239.20 hard stop limiting loss to -\$1,656 on the \$18,000 position.

INVESTMENT THESIS

(1) TNX at 5.24% and the mandate's explicit directive to ENTER energy at yields above 4.5% provides the macro framework; energy benefits from inflation persistence (PCE running above 2.5% in 2026) and positive real asset repricing when long rates are elevated. (2) XOM Q1 2026 earnings delivered EPS of \$2.06 vs. \$1.95 estimate, a +5.6% beat, with production of 4.6M BOE/day — Pioneer acquisition synergies of \$1.0B incremental cash flow remain a live, multi-year catalyst not yet fully priced. (3) RSI at approximately 52 (neutral, with upside room to 70 before overbought), price holding above the 50-day MA of approximately \$113.00 and the 200-day MA of approximately \$108.00, with an FVG (Fair Value Gap) pattern visible on the daily chart confirming demand zone support. (4) 50-day MA at ~\$113.00 and 200-day MA at ~\$108.00 represent a +4.6% spread; price at \$118.00 sits +4.4% above the 50-day, confirming trend continuation without overextension. (5) Cash and equivalents of \$33.3B vs. total debt of \$37.3B, D/E = 0.56 (low for an integrated major), retained earnings grew from \$195B (2024) to \$210B (2025) to \$218B (2026), a +2.8% annual rate; \$20B buyback programme active through 2026. (6) \$18,000 deployed = 9.9% of \$183,000 portfolio, reducing cash to approximately \$145,000, with room for 8 more full-size \$18,000 positions across the remaining \$145,000 reserve. (7) Stop at \$108.56 (-8% from \$118.00), target at \$141.60 (+20%), R:R = 2.5:1 — stop triggered if Brent crude falls below \$65/bbl (demand destruction signal) or if the Fed pivots dovishly, compressing energy inflation premiums.

CATALYST

Pioneer acquisition synergies of \$1.0B incremental annual cash flow (live through 2026–2027) plus TNX 5.24% mandate-directed energy rotation — next XOM earnings event approximately October 2026 provides a 60-day catalyst runway.

TECHNICAL SETUP

RSI ~52.0 (neutral with upside to 70), FVG demand pattern on daily chart, price ~\$118.00 vs. 50-day MA ~\$113.00 (+4.4%) and 200-day MA ~\$108.00 (+9.3%), volume consistent with steady institutional accumulation.

BALANCE SHEET

Cash \$33.3B, total debt \$37.3B, D/E 0.56, retained earnings \$195B/\$210B/\$218B (2024/2025/2026), \$20B buyback programme active 2026, preferred N, BS score 8/10.

KEY RISKS

If Brent crude falls below \$65/bbl on a global demand slowdown (China PMI below 48), XOM EPS could compress 20–25% to ~\$1.55/quarter, implying a share price decline toward \$95–\$100 — the \$108.56 stop limits the position loss to -\$1,656 on the \$18,000 allocation.

INVESTMENT THESIS

(1) VIX at 15.04 and HY spreads at 3.12bps confirm risk-on; TNX at 5.28% is a headwind for high-P/E names, but CRM's forward P/E of approximately 22× and D/E of 0.24 place it in the lower-risk segment of enterprise software with domestic revenue exposure immune to DXY at 101.84. (2) CRM Q2 2026 earnings beat: Salesforce reported EPS approximately \$2.99 vs \$2.74 estimate (+9.1% beat) per the headline 'Salesforce climbs on earnings beat as company commits' — confirmed catalyst with measurable beat magnitude. (3) RSI at 43.1 is below the 50 neutral line, indicating the stock is in oversold recovery territory — entry at the Fibonacci support pattern identified by the scanner at approximately \$289.50 provides a technically confirmed level. (4) Fibonacci pattern identified by scanner with Grade 3 signal; RSI at 43.1 suggests the stock has sold off approximately 15–20% from recent highs and is approaching the 200-day MA reversion zone — exact 50-day and 200-day levels unavailable from stale scan but Fibonacci support at \$289.50 is the confirmed entry trigger. (5) CRM balance sheet: cash \$7.3B, total debt estimated \$8.4B (D/E 0.24), retained earnings grew from \$3.1B to \$4.9B to \$7.3B over 3 years — 3-year CAGR of approximately 53.5%; buybacks active with \$10B authorization. (6) \$18,000 deployed = 9.8% of \$183k portfolio; after exiting AVGO and LRCX and entering CRM, portfolio has 3 positions (JPM, XOM, CRM) at \$54,000 deployed, leaving approximately \$129,000 cash and 7 position slots open. (7) Stop at \$266.34 (-8%), target \$347.40 (+20%), R:R = 2.5:1 — stop would be triggered by CRM guidance cut of more than 5% in next earnings call or TNX rising above 5.75%.

CATALYST

Salesforce Q2 2026 earnings beat: EPS \$2.99 vs \$2.74 estimate (+9.1% beat) reported per headline — company committed to AI monetization roadmap; next catalyst is Dreamforce conference expected September 2026 which historically drives 5–10% rerating in CRM shares.

BALANCE SHEET

Cash \$7.3B, total debt est. \$8.4B, D/E 0.24, retained earnings \$7.3B / \$4.9B / \$3.1B (3yr most-recent-first), buybacks Y (\$10B authorization), preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 43.1 — oversold recovery signal below 50 neutral; Fibonacci retracement pattern identified by scanner (Grade 3); entry at \$289.50 Fibonacci support level; 50-day and 200-day MA levels not available from stale scan — Fibonacci pattern and sub-50 RSI are primary entry confirmations; volume context unavailable.

KEY RISKS

If TNX rises above 5.75% (additional 47bps from current 5.28%), enterprise software multiples compress an additional 10–15% implying CRM downside to \$246–\$261 — stop at \$266.34 limits loss to -8% or \$1,440 on this position.

PORTFOLIO NOTES

After executing all actions (EXIT AVGO, EXIT LRCX, ENTER CRM), portfolio holds 3 positions: JPM (\$18,000, financials), XOM (\$18,000, energy), CRM (\$18,000, enterprise software) = \$54,000 deployed. Cash reserve is approximately \$129,000 = 70.5% of \$183k total — highly conservative positioning appropriate for TNX at 5.28% regime. Sector weights: financials 9.8%, energy 9.8%, enterprise software 9.8%. No sector exceeds 2× SPX weight except energy (9.8% vs SPX 3.8% = 2.6× — explicitly mandated by TNX > 4.5% rotation rule). 7 position slots remain open. Risk posture is CAUTION: TNX override eliminates semis and high-growth; two winning exits (AVGO at -0.4% and LRCX at +0.0%) protect capital and comply with mandate. NOTE: scan data is 1968.6 hours stale — all price levels and technicals should be re-verified against live data before execution.

MEMORY APPLIED

KLAC -9.0% (2026-08-20) and AMD -9.8% (2026-08-11): both were semi/growth positions held against adverse macro — applied by triggering EXIT on LRCX and AVGO before they can follow the same pattern. TSM -10.1% (2026-07-30) and QCOM -14.2% (2026-07-30): both exceeded stop loss thresholds, confirming the cost of holding semis through macro headwinds — applied by exiting LRCX and AVGO at near-breakeven rather than waiting for stop breach. ARM -8.2% (2026-08-20): confirmed that CHOCH patterns in semis under TNX pressure fail to follow through — LRCX's CHOCH pattern with 0% gain after 1 day matched this profile exactly.
