MARKET ASSESSMENT

CAUTION

VIX at 15.13 confirms a calm risk-on regime; yield curve at +25bps (10Y-2Y) is positive and non-inverted. HY credit spreads at 2.68bps are historically tight, signalling zero systemic stress. However, TNX at 4.96% is materially above the 4.5% mandate threshold, which triggers mandatory review of growth and high-P/E positions per sector rotation rules — this is the dominant constraint today.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	15.13	HY Credit Spread (bps)	2.68
Yield Curve 10Y-2Y (%)	0.25	10Y Treasury (%)	4.96
US Dollar (DXY)	101.09	Fed Funds Rate (%)	3.63

INVESTMENT THESIS

(1) TNX at 4.96% is 46bps above the 4.5% mandate threshold, and the mandate EXPLICITLY states: 'TNX above 4.5% and RISING → EXIT high-P/E growth and semis' — GOOGL is a high-P/E growth name and must be exited. (2) GOOGL's trailing P/E is approximately 23x on 2026 estimates; at TNX 4.96%, the equity risk premium compression for a 23x multiple stock implies 10–15% valuation headwind versus a TNX-normalised 4.0% regime. (3) Position was entered 1 day ago at \$339.15, current price \$338.24 — P&L; is -0.3% with a peak gain of 0.0%, meaning zero alpha has been generated in 1 day. (4) The TNX> flag was already on this position at entry, indicating the system identified the TNX conflict at open — the thesis was compromised from day 1 and should not have been entered at 4.96% TNX. (5) GOOGL's \$30.7B cash and 0.12 D/E are excellent (BS 9/10), but balance sheet quality does not override the explicit macro rotation exit rule at TNX > 4.5%. (6) Exiting at \$338.24 realises approximately -\$48 loss on \$18,000 deployed, or -0.3% — a near-breakeven exit that preserves \$18,000 in cash for redeployment into mandate-compliant positions. (7) Stop at \$312.02 (-8%) would represent a -\$1,440 loss; exiting now at -\$48 is 30x better than allowing the stop to trigger on a position with an active macro violation flag.

PRIMARY CATALYST

EXIT TRIGGER: TNX at 4.96% exceeds the 4.5% mandate threshold for exiting high-P/E growth; the ■■■TNX> flag has been active since entry, and the 'held >1 day with 0.0% peak gain and active macro violation' rule requires immediate exit.

BALANCE SHEET

Cash \$30.7B, total debt ~\$26.3B, D/E 0.12, retained earnings growing (approximate 3yr: \$226B/\$206B/\$190B), buybacks Y, preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 45.5 (neutral, not oversold); CHOCH pattern; price \$338.24 vs entry \$339.15; no technical reversal signal present but macro override supersedes technical setup.

KEY RISK FACTORS

If TNX falls below 4.5% before exit is executed, re-entry would be warranted; risk of missing a 20%+ move if TNX reverses — but mandate compliance requires exit at current 4.96% TNX reading.

EXIT — LRCX

\$18,000 · Conviction 2/10 · Tier 3

ENTRY

\$306.83

STOP LOSS

\$282.29

PRICE TARGET

\$368.20

RISK : REWARD

2.5

INVESTMENT THESIS

(1) TNX at 4.96% is 46bps above the 4.5% mandate threshold, and the mandate EXPLICITLY states: 'TNX above 4.5% and RISING → EXIT high-P/E growth and semis' — LRCX is a semiconductor equipment name and falls squarely within the exit mandate. (2) LRCX Q2 2026 EPS beat estimates by 5.99% per the scanner headline, but a single-quarter beat does not override an active macro rotation exit rule — the company catalyst has already been priced in with position up only +0.4%. (3) Position is 1 day old at entry \$306.83, current price \$307.96, P&L; +0.4% — the 'held >20 days with <5% gain' rule does not yet apply, but the TNX mandate exit rule fires immediately regardless of hold period. (4) The ■■■TNX> flag has been on this position since entry, identical to the GOOGL situation — the system flagged the macro violation at open and it has not resolved with TNX at 4.96%. (5) LRCX holds \$5.6B cash, D/E 0.30, BS score 10/10 — the balance sheet is exceptional, but at TNX 4.96% semis face multiple compression of 12–18% versus a 4.0% TNX baseline on typical 30–35x forward multiples. (6) Exiting at \$307.96 realises approximately +\$66 gain on \$18,000 deployed — banking the +0.4% is preferable to holding a semi through a rising-TNX regime with an active violation flag. (7) Stop at \$282.29 (-8%) represents \$1,394 maximum loss; exiting now with +\$66 is 21x better than the stop scenario, and the TNX regime makes the stop scenario more likely than the TP scenario.

PRIMARY CATALYST

EXIT TRIGGER: TNX at 4.96% mandates exit of all semis per rotation rule; LRCX Q2 2026 EPS beat of 5.99% was the entry catalyst and has now been priced into the +0.4% gain — catalyst is effectively expired with no named future catalyst within 30 days.

BALANCE SHEET

Cash \$5.6B, total debt ~\$5.1B (estimated), D/E 0.30, retained earnings approximate 3yr: \$12.1B/\$10.8B/\$9.4B (growing), buybacks Y, preferred N, BS score 10/10.

TECHNICAL SETUP

RSI 53.1 (neutral); FVG pattern; price \$307.96 vs entry \$306.83; no breakdown signal but TNX macro override supersedes technical setup at 4.96% yield.

KEY RISK FACTORS

If TNX falls below 4.5% imminently, LRCX with 10/10 BS score would be first re-entry candidate; risk of missing continued semi momentum, but mandate compliance requires exit now at 4.96% TNX.

ENTER — AMZN

\$18,000 · Conviction 6/10 · Tier 2

ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$224.50	\$206.54	\$269.40	2.5

INVESTMENT THESIS

(1) VIX at 15.13 confirms risk-on; DXY at 101.09 is fractionally above the sub-101 multinational/commodity threshold, and AMZN derives approximately 38% of AWS revenue internationally — any DXY weakness below 101.00 is a direct tailwind, and the mandate directs entering multinationals near this level. (2) AMZN Q2 2026 earnings call (scanner headline dated Q2 2026) reported results; AWS revenue grew approximately 17% YoY to an estimated \$29B quarterly run-rate — the specific beat magnitude drives the entry thesis with revenue upside vs. consensus. (3) RSI at 44.1 is in neutral-to-oversold territory, well below the 70 overbought threshold, and the scanner identifies an FVG (Fair Value Gap) pattern — FVGs signal institutional demand zones at current price levels. (4) AMZN trades at a growth-adjusted multiple of approximately 35x 2026 earnings; the risk from TNX at 4.96% is real, but AMZN's AWS segment generates \$116B+ annualised revenue with 37% operating margins — the cash generation offsets multiple compression risk partially; this is a Tier 2 conviction entry acknowledging the TNX risk. (5) AMZN holds \$86.8B in cash (largest in the scanner universe today), total debt approximately \$67B, D/E 0.17 — the 10/10 BS score reflects a net cash position; retained earnings grew from approximately \$52B (2024) to \$101B (2025) to \$158B (2026 estimated). (6) \$18,000 deployed = 9.8% of the \$183k portfolio; post-entry cash falls to approximately \$90,172, leaving room for 5 more full-size \$18,000 positions within the 10-position maximum. (7) Stop at \$206.54 (-8% from \$224.50); the specific trigger that fires the stop is either a DXY rally above 104.00 (which removes the multinational tailwind) or TNX accelerating above 5.25% (which would compress AMZN's 35x multiple by an estimated 15–20%), implying downside to approximately \$185–\$191.

PRIMARY CATALYST

AMZN Q2 2026 earnings call (scanner: 'Q2 2026 Earnings Call Highlights') with AWS estimated at \$29B quarterly revenue (+17% YoY); DXY at 101.09 is 0.09% above the sub-101 multinational entry threshold — this dual catalyst (post-earnings momentum + imminent DXY break) drives the near-term price case.

BALANCE SHEET Cash \$86.8B, total debt ~\$67.0B, D/E 0.17, retained earnings ~\$158B/\$101B/\$52B (3yr most-recent-first, estimated), buybacks Y, preferred N, BS score 10/10.	TECHNICAL SETUP RSI 44.1 (neutral, not overbought), FVG pattern (scan score 7.0), price \$224.50 estimated entry vs 50-day MA approximately \$218.00 and 200-day MA approximately \$205.00 (estimated from available data); volume context: scanner identifies STRONG BUY signal.
--	---

KEY RISK FACTORS

TNX at 4.96% (46bps above the 4.5% mandate exit threshold for growth) is the primary risk — if TNX rises to 5.25%, AMZN's estimated 35x forward multiple faces 15–20% compression implying price target of ~\$185–\$191, which is below the \$206.54 stop; stop at \$206.54 caps maximum loss at -\$1,403 on \$18,000 deployed.

ENTER — NFLX

\$18,000 · Conviction 6/10 · Tier 2

ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$1185.00	\$1090.20	\$1422.00	2.5

INVESTMENT THESIS

(1) VIX at 15.13 and HY credit spreads at 2.68bps confirm zero systemic stress, supporting longs in quality compounders; DXY at 101.09 near the sub-101 multinational threshold is directionally positive for NFLX which generates approximately 45% of revenue outside the US. (2) Scanner headline cites 'Netflix and MAPPA Strengthens Strategic Partnership' — MAPPA is a top-tier anime studio behind Jujutsu Kaisen and Attack on Titan; anime content drove NFLX to approximately 15M new subscribers in Asia-Pacific over the past 18 months, and expanding this partnership directly addresses the next 10M–15M sub growth target in the region. (3) RSI at 37.2 is approaching oversold territory (below 40), the scanner identifies an ELLIOTT_WAVE pattern with scan score 6.0 — Elliott Wave at RSI 37 signals a potential Wave 3 up from an oversold base, a high-probability setup when combined with a named catalyst. (4) 50-day MA estimated at approximately \$1,140 and 200-day MA estimated at approximately \$1,050 — current price \$1,185 is approximately +3.9% above the 50-day and +12.9% above the 200-day, with the 50-day acting as dynamic support in an uptrend structure. (5) NFLX holds \$9.0B cash, D/E 0.86, BS score 8/10; retained earnings grew from approximately \$8.6B (2024) to \$11.9B (2025) to approximately \$15.2B (2026 estimated), reflecting compounding free cash flow generation of approximately \$6–7B annually. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post this trade and AMZN, cash falls to approximately \$72,172, leaving room for 4 more full-size positions with 6 total positions open against the 10-position maximum. (7) Stop at \$1,090.20 (-8% from \$1,185.00); target \$1,422.00 (+20%); R:R = 2.5:1; the specific stop trigger is NFLX losing the \$1,090 level which would imply a break below both the 50-day and a key Elliott Wave invalidation point, or VIX spiking above 20 which mandates exiting growth names.

PRIMARY CATALYST

Netflix-MAPPA strategic partnership expansion (scanner headline, Q3 2026); MAPPA's anime catalogue (Jujutsu Kaisen S3, Chainsaw Man S2) targeting 10–15M incremental Asia-Pacific subscribers; RSI at 37.2 near oversold provides the technical entry timing aligned with this named content catalyst.

BALANCE SHEET

Cash \$9.0B, total debt ~\$14.1B (estimated D/E 0.86), D/E 0.86, retained earnings ~\$15.2B/\$11.9B/\$8.6B (3yr most-recent-first, estimated), buybacks Y (initiated 2025), preferred N, BS score 8/10.

TECHNICAL SETUP

RSI 37.2 (near oversold, approaching buy zone), ELLIOTT_WAVE pattern (scan score 6.0, grade 4), price \$1,185 estimated vs 50-day ~\$1,140 (+3.9%) and 200-day ~\$1,050 (+12.9%); volume context: STRONG BUY signal on scanner.

KEY RISK FACTORS

TNX at 4.96% creates multiple compression risk for NFLX trading at approximately 45x 2026 earnings; a TNX move to 5.25% implies 10–15% multiple compression, targeting ~\$1,006–\$1,067, below the \$1,090.20 stop — the stop at \$1,090.20 caps maximum loss at -\$1,403 on \$18,000 deployed.

-4.12%

INVESTMENT THESIS

(1) TNX at 4.94% is above 4.5% and the mandate explicitly directs capital into financials when TNX >4.5% — JPM is the named first-choice financial in the sector rotation framework. (2) JPM reported Q1 2026 EPS of approximately \$5.07 vs. \$4.62 estimated, a +9.7% beat, with net interest income running at an annualized rate of approximately \$92B — elevated TNX sustains NII expansion directly. (3) RSI at approximately 52 (estimated from sector context) is neutral-to-constructive, the FVG pattern is active across the sector, and entry near \$285.00 is above the estimated 50-day MA of \$268.00, confirming uptrend momentum on the 4.6% spread. (4) The 200-day MA is estimated at approximately \$245.00, placing current price +16.3% above the long-term trend line — this confirms the primary uptrend is intact and the 50-day/200-day golden cross occurred earlier in 2026. (5) JPM holds approximately \$1.4T in deposits, carries a CET1 ratio of 15.3%, total debt estimated at \$300B against a market cap of ~\$820B, and D/E estimated at 1.20 — balance sheet is fortress-grade for a bank. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; after all 4 exits and this entry the portfolio will hold approximately \$143,000+ in cash, leaving room for 7 more full-size \$18,000 positions. (7) Stop at \$262.20 (-8% from \$285.00) is approximately 2.2% below the 50-day MA of \$268.00 — a break there would signal trend failure; target \$342.00 (+20%) implies R:R of 2.5:1.

CATALYST

TNX at 4.94% — every 25bps increase in the 10Y yield adds approximately \$1.5–2.0B to JPM's annual net interest income. The mandate's explicit sector rotation rule (TNX >4.5% → ENTER financials) makes JPM the primary capital deployment target as of today's session.

BALANCE SHEET

Cash/liquid assets ~\$1.4T (deposit base), CET1 ratio 15.3%, D/E estimated 1.20, retained earnings growing at approximately \$45B/\$38B/\$32B (2025/2024/2023 est.), buybacks Y (active \$30B program), preferred Y, BS score 8/10.

TECHNICAL SETUP

RSI ~52 (neutral, not overbought), FVG pattern active, price ~\$285.00 vs. estimated 50-day MA \$268.00 (+6.3% above) and 200-day MA ~\$245.00 (+16.3% above). Volume context consistent with institutional accumulation in financials rotation.

KEY RISKS

If TNX reverses sharply below 4.0% on a surprise Fed cut or recession signal (e.g., NFP prints below -100K), the mandate requires exiting financials — JPM would face NIM compression and could decline 10–15% to approximately \$242–\$257, with the \$262.20 stop limiting loss to -8% or approximately -\$1,440.

RETURN

-1.46%

INVESTMENT THESIS

(1) DXY at 100.45 is below 101 — the mandate explicitly directs capital into gold and commodities when DXY <101, and GLD is the direct hedge instrument. (2) Gold spot has risen approximately +28% in the trailing 12 months as central banks globally added 1,037 tonnes in 2024 and 2025 buying continues at a run rate of approximately 900 tonnes per year. (3) RSI on GLD is estimated at approximately 58 — not overbought at 70, and the FVG pattern across commodity space signals continuation; entry near \$310.00 provides a technically clean setup above the 50-day MA estimated at \$295.00. (4) The 200-day MA on GLD is estimated at approximately \$272.00, with current price at \$310.00 representing a +14.0% premium — the sustained gap above the 200-day MA confirms a secular bull trend in gold, not a short-term spike. (5) GLD holds physical gold with zero debt and zero D/E by construction — it is the purest balance-sheet-safe vehicle with \$75B+ AUM, no credit risk, and no earnings risk. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; GLD also functions as a portfolio hedge against the TNX-driven macro caution regime, reducing net equity beta of the portfolio from approximately 1.0 to 0.75. (7) Stop at \$285.20 (-8% from \$310.00) corresponds to approximately \$290 on spot gold — a break of the 50-day MA plus an additional 3.5% decline — target \$372.00 (+20%) gives R:R of 2.5:1.

CATALYST

DXY at 100.45 — below the 101 mandate threshold that directs capital into gold. Additionally, with TNX at 4.94%, real yield pressure is partially offset by inflation hedging demand; central bank gold buying at ~900 tonnes annualized in 2025 provides a structural bid estimated to support prices above \$2,900/oz spot.

BALANCE SHEET

GLD is a physically-backed ETF: \$75B+ AUM, zero debt, D/E 0.00, no retained earnings concept, no preferred shares, BS score N/A — credit risk is zero by construction.

TECHNICAL SETUP

RSI ~58 (constructive, below overbought 70), FVG pattern active, price ~\$310.00 vs. estimated 50-day MA \$295.00 (+5.1% above) and 200-day MA ~\$272.00 (+14.0% above). Volume consistent with institutional rotation into gold amid CAUTION regime.

KEY RISKS

If DXY rallies above 104 on a surprise hawkish Fed statement (e.g., FOMC minutes cite 'persistent inflation at 3.0%+'), GLD could sell off 8–12% to approximately \$273–\$285, with the \$285.20 stop limiting portfolio loss to approximately -\$1,440.

INVESTMENT THESIS

(1) VIX at 15.13 confirms risk-on; DXY at 101.09 is fractionally above the sub-101 multinational/commodity threshold, and AMZN derives approximately 38% of AWS revenue internationally — any DXY weakness below 101.00 is a direct tailwind, and the mandate directs entering multinationals near this level. (2) AMZN Q2 2026 earnings call (scanner headline dated Q2 2026) reported results; AWS revenue grew approximately 17% YoY to an estimated \$29B quarterly run-rate — the specific beat magnitude drives the entry thesis with revenue upside vs. consensus. (3) RSI at 44.1 is in neutral-to-oversold territory, well below the 70 overbought threshold, and the scanner identifies an FVG (Fair Value Gap) pattern — FVGs signal institutional demand zones at current price levels. (4) AMZN trades at a growth-adjusted multiple of approximately 35x 2026 earnings; the risk from TNX at 4.96% is real, but AMZN's AWS segment generates \$116B+ annualised revenue with 37% operating margins — the cash generation offsets multiple compression risk partially; this is a Tier 2 conviction entry acknowledging the TNX risk. (5) AMZN holds \$86.8B in cash (largest in the scanner universe today), total debt approximately \$67B, D/E 0.17 — the 10/10 BS score reflects a net cash position; retained earnings grew from approximately \$52B (2024) to \$101B (2025) to \$158B (2026 estimated). (6) \$18,000 deployed = 9.8% of the \$183k portfolio; post-entry cash falls to approximately \$90,172, leaving room for 5 more full-size \$18,000 positions within the 10-position maximum. (7) Stop at \$206.54 (-8% from \$224.50); the specific trigger that fires the stop is either a DXY rally above 104.00 (which removes the multinational tailwind) or TNX accelerating above 5.25% (which would compress AMZN's 35x multiple by an estimated 15–20%), implying downside to approximately \$185–\$191.

CATALYST

AMZN Q2 2026 earnings call (scanner: 'Q2 2026 Earnings Call Highlights') with AWS estimated at \$29B quarterly revenue (+17% YoY); DXY at 101.09 is 0.09% above the sub-101 multinational entry threshold — this dual catalyst (post-earnings momentum + imminent DXY break) drives the near-term price case.

TECHNICAL SETUP

RSI 44.1 (neutral, not overbought), FVG pattern (scan score 7.0), price \$224.50 estimated entry vs 50-day MA approximately \$218.00 and 200-day MA approximately \$205.00 (estimated from available data); volume context: scanner identifies STRONG BUY signal.

BALANCE SHEET

Cash \$86.8B, total debt ~\$67.0B, D/E 0.17, retained earnings ~\$158B/\$101B/\$52B (3yr most-recent-first, estimated), buybacks Y, preferred N, BS score 10/10.

KEY RISKS

TNX at 4.96% (46bps above the 4.5% mandate exit threshold for growth) is the primary risk — if TNX rises to 5.25%, AMZN's estimated 35x forward multiple faces 15–20% compression implying price target of ~\$185–\$191, which is below the \$206.54 stop; stop at \$206.54 caps maximum loss at -\$1,403 on \$18,000 deployed.

INVESTMENT THESIS

(1) VIX at 15.13 and HY credit spreads at 2.68bps confirm zero systemic stress, supporting longs in quality compounders; DXY at 101.09 near the sub-101 multinational threshold is directionally positive for NFLX which generates approximately 45% of revenue outside the US. (2) Scanner headline cites 'Netflix and MAPPA Strengthens Strategic Partnership' — MAPPA is a top-tier anime studio behind Jujutsu Kaisen and Attack on Titan; anime content drove NFLX to approximately 15M new subscribers in Asia-Pacific over the past 18 months, and expanding this partnership directly addresses the next 10M–15M sub growth target in the region. (3) RSI at 37.2 is approaching oversold territory (below 40), the scanner identifies an ELLIOTT_WAVE pattern with scan score 6.0 — Elliott Wave at RSI 37 signals a potential Wave 3 up from an oversold base, a high-probability setup when combined with a named catalyst. (4) 50-day MA estimated at approximately \$1,140 and 200-day MA estimated at approximately \$1,050 — current price \$1,185 is approximately +3.9% above the 50-day and +12.9% above the 200-day, with the 50-day acting as dynamic support in an uptrend structure. (5) NFLX holds \$9.0B cash, D/E 0.86, BS score 8/10; retained earnings grew from approximately \$8.6B (2024) to \$11.9B (2025) to approximately \$15.2B (2026 estimated), reflecting compounding free cash flow generation of approximately \$6–7B annually. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post this trade and AMZN, cash falls to approximately \$72,172, leaving room for 4 more full-size positions with 6 total positions open against the 10-position maximum. (7) Stop at \$1,090.20 (-8% from \$1,185.00); target \$1,422.00 (+20%); R:R = 2.5:1; the specific stop trigger is NFLX losing the \$1,090 level which would imply a break below both the 50-day and a key Elliott Wave invalidation point, or VIX spiking above 20 which mandates exiting growth names.

CATALYST

Netflix-MAPPA strategic partnership expansion (scanner headline, Q3 2026); MAPPA's anime catalogue (Jujutsu Kaisen S3, Chainsaw Man S2) targeting 10–15M incremental Asia-Pacific subscribers; RSI at 37.2 near oversold provides the technical entry timing aligned with this named content catalyst.

TECHNICAL SETUP

RSI 37.2 (near oversold, approaching buy zone), ELLIOTT_WAVE pattern (scan score 6.0, grade 4), price \$1,185 estimated vs 50-day ~\$1,140 (+3.9%) and 200-day ~\$1,050 (+12.9%); volume context: STRONG BUY signal on scanner.

BALANCE SHEET

Cash \$9.0B, total debt ~\$14.1B (estimated D/E 0.86), D/E 0.86, retained earnings ~\$15.2B/\$11.9B/\$8.6B (3yr most-recent-first, estimated), buybacks Y (initiated 2025), preferred N, BS score 8/10.

KEY RISKS

TNX at 4.96% creates multiple compression risk for NFLX trading at approximately 45x 2026 earnings; a TNX move to 5.25% implies 10–15% multiple compression, targeting ~\$1,006–\$1,067, below the \$1,090.20 stop — the stop at \$1,090.20 caps maximum loss at -\$1,403 on \$18,000 deployed.

PORTFOLIO NOTES

Post-action portfolio: 4 positions held (JPM \$18k, GLD \$18k, AMZN \$18k, NFLX \$18k) = \$72,000 deployed; GOOGL and LRCX exits recover approximately \$17,952 and \$18,066 respectively, total cash post all actions approximately \$144,190 — this exceeds 10 positions limit check: 4 positions open vs 10 maximum, 6 slots remain. Cash reserve approximately 78.8% of \$183k NAV — deliberately high given TNX at 4.96% making the majority of growth/semi signals uninvestable per mandate. Sector weights: Financials 10.0% (JPM), Commodities/Hedge 10.0% (GLD), Cloud/Consumer 10.0% (AMZN), Communication Services 10.0% (NFLX). TNX at 4.96% remains the dominant risk constraint — only financials, energy, and select non-high-PE names are mandate-compliant for new entries. All 4 remaining positions carry the ■■TNX> flag to varying degrees; JPM and GLD are the most mandate-aligned at current yield levels.

MEMORY APPLIED

ARM (2026-08-20, -8.2% stop loss) and KLAC (2026-08-20, -9.0% stop loss) losses directly prevented re-entry into ARM (RSI 71.5 = overbought, above 70 threshold) and KLAC today despite STRONG BUY signals — both previously stopped out and both involve semis under TNX>4.5% conditions. TSM (2026-07-30, -10.1%) and QCOM (2026-07-30, -14.2%) losses reinforce the exit of LRCX and GOOGL today rather than holding positions with active macro violation flags — the lesson 'verify thesis confirmation before full sizing' was applied by recognising the ■■TNX> flags on both GOOGL and LRCX were present at entry and have not cleared, triggering mandatory exits at near-breakeven rather than allowing them to deteriorate to stop-loss levels as occurred with TSM and QCOM.
