

MeritQuant — Autonomous Trade Report

OPEN · 9:35 AM ET · 18 Jun 2026 · 09:14 UTC

Market Assessment

Macro backdrop is constructive: VIX calm at 17.2, positive yield curve, and tight HY spreads confirm a healthy risk-on credit environment. However, the scanner returned zero actionable signals this window, meaning there is no catalyst-plus-technical confirmation to act on.

REGIME: RISK-ON

Macro Snapshot

Indicator	Value	Indicator	Value
VIX	17.18	US Dollar (DXY)	100.55
Yield Curve 10Y-2Y	0.29	HY Credit (bps)	2.71
10Y Treasury (%)	4.43	Fed Funds Rate (%)	3.63

Portfolio Snapshot

Total: **\$183,000** | Cash: **\$183,000** | Positions: **0/6**

Notes: Portfolio is 100% cash (\$183,000) with 0/6 positions. Despite a favorable risk-on regime, the framework mandates that both a fundamental catalyst AND technical confirmation must be present before entering. With an empty signal scanner, there are no names that meet the minimum 6/10 conviction threshold. Discipline over activity — holding cash is the correct action rather than manufacturing trades. Will re-engage when the scanner surfaces qualified setups.

Memory applied: No prior trade history exists, so no specific lessons were available to apply. Defaulting to core framework discipline: never chase momentum, never force entries without confirmed catalyst and chart alignment, and preserve capital when no edge is present.
