Market Assessment

Macro is firmly RISK-ON: VIX subdued at 18.9, yield curve positive at +0.31%, and HY spreads exceptionally tight, all signaling healthy credit and risk appetite. The semiconductor/AI complex dominates the scanner with strong earnings catalysts. However, the existing book is heavily concentrated in semis/AI and showing aggregate unrealized losses, demanding consolidation rather than aggressive new exposure.

REGIME: RISK-ON

Macro Snapshot

Indicator	Value	Indicator	Value
VIX	18.89	US Dollar (DXY)	101.50
Yield Curve 10Y-2Y	0.31	HY Credit (bps)	2.76
10Y Treasury (%)	4.41	Fed Funds Rate (%)	3.63

Portfolio Snapshot

Total: **\$170,003** | Cash: **\$82,670** | Positions: **5/6**

Ticker	Shares	Entry	Current	Value	P&L \$	P&L %
CLOU	839.0	\$21.45	\$21.12	\$17,719	\$-281	-1.6%
AVGO	44.1	\$408.61	\$378.91	\$16,691	\$-1,309	-7.3%
TSM	40.1	\$449.32	\$434.99	\$17,426	\$-574	-3.2%
GOOGL	48.9	\$368.03	\$343.71	\$16,811	\$-1,189	-6.6%
KLAC	72.2	\$235.45	\$258.80	\$18,686	\$+1,686	+9.9%

Notes: Book is over-concentrated in semis/AI (CLOU, AVGO, TSM, GOOGL, KLAC) with three positions in unrealized loss and AVGO sitting precariously near its 8% stop. Despite a RISK-ON regime, the correct move is consolidation: hold quality names, let KLAC (the lone winner) run, and resist adding a 6th position into extended RSI names (MU 64.5, AMAT 72.5, LRCX 64.7) which would compound concentration and chase momentum. ~\$82K cash retained as dry powder for a genuinely oversold, catalyst-backed non-semi diversifier (CRM RSI 31.8 is interesting but sector overlap-adjacent and warrants observation).

Memory applied: With no prior trade history, I applied framework rules conservatively: enforced the 'never chase momentum' guard against high-RSI semi names, respected max-concentration discipline by declining the 6th slot, and honored stop-loss vigilance on AVGO. Establishing a baseline of capital preservation in a thesis-stressed but RISK-ON tape.
