RISK-ON

MARKET ASSESSMENT

RISK-ON

VIX at 15.30 remains calm and below the 20 risk-off threshold, confirming a RISK-ON regime; the 10Y-2Y yield curve is positive at +41bps, eliminating recession signal. HY credit spreads at 2.65bps are historically tight, well below the 350bps danger threshold. The DXY at 99.18 — below the 101 export-tailwind threshold — remains a net positive for multinational tech and semi exporters. However, TNX at 4.77% is above the 4.5% growth-compression warning level, creating a headwind flag on all high-P/E holdings including TSM, ARM, NVDA, AVGO, and AMAT.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	15.30	HY Credit Spread (bps)	2.65
Yield Curve 10Y-2Y (%)	0.41	10Y Treasury (%)	4.77
US Dollar (DXY)	99.18	Fed Funds Rate (%)	3.63

INVESTMENT THESIS

(1) AVGO is +1.8% in 12 days with Peak P&L; also at +1.8% — this triggers the 'held >20 days with <5% gain' early-warning rule, and with only 8 days remaining before the 20-day threshold, the position shows zero momentum. (2) TNX at 4.77% exceeds the 4.5% threshold flagged at entry (■■■TNX>), applying compression pressure on AVGO's 25x forward P/E multiple. (3) RSI at 38.0 is approaching oversold but in a downtrend context — not a bullish reversal signal at this stage without a confirmed bounce above \$357. (4) The Q4 2025 earnings catalyst cited at entry has already been priced in (earnings passed), and no specific named catalyst with a date exists within the next 30 days to drive the remaining +18.2% to target. (5) Balance sheet is sound at \$16.2B cash and D/E 1.59, but leverage above 1.5x in a rising TNX environment (4.77%) creates incremental refinancing risk on AVGO's \$73B acquisition-driven debt stack. (6) Exiting at \$357.90 recovers \$18,324, adding approximately \$324 gain to cash, bringing total cash to ~\$84,955 — this capital can be redeployed into a higher-conviction setup with a live catalyst. (7) If held and TNX rises to 5.0%, a 10–15% multiple compression on AVGO implies downside to \$299–\$317, well below the \$323.56 stop, suggesting the stop is inadequate protection for the macro risk.

PRIMARY CATALYST

EXIT trigger: Q4 2025 earnings catalyst has fully played out with no new named catalyst within 30 days; TNX at 4.77% above the 4.5% compression threshold per mandate rules; position at only +1.8% after 12 days signals dead money.

BALANCE SHEET

Cash \$16.2B, total debt ~\$73B, D/E 1.59, retained earnings growing post-VMware integration, buybacks Y, preferred N, BS score 6/10.

TECHNICAL SETUP

RSI 38.0 approaching oversold in downtrend, FVG pattern at entry zone \$351–\$357 now acting as resistance, no confirmed reversal signal.

KEY RISK FACTORS

TNX above 4.77% compressing 25x P/E by 10–15% implies downside to \$299–\$317; \$323.56 stop would activate but macro move could gap through it.

RISK : REWARD

2.5

INVESTMENT THESIS

(1) VIX at 15.30 and DXY at 99.18 — below the 101 threshold — confirm RISK-ON with a weak-dollar tailwind for QCOM's 95%+ international revenue mix, including \$8.0B+ annual China handset licensing fees. (2) QCOM's diversification strategy — automotive design wins up 50%+ YoY and PC/IoT revenue targeting \$4B by FY2027 — represents a live catalyst: the Snapdragon X Elite PC ramp expected to contribute \$1.2B incremental revenue in H2 CY2026. (3) RSI at 53.1 is neutral and constructive — not overbought — with the FVG pattern identified at the \$165–\$170 zone confirming the entry at \$168.50 after scanning as the 9.0 top signal. (4) The 50-day MA is estimated at approximately \$162 and the 200-day at approximately \$155; price at \$168.50 sits 3.9% above the 50-day and 8.7% above the 200-day — a bullish gap structure signaling the uptrend is intact. (5) Balance sheet: \$5.5B cash, D/E 3.22 is elevated but manageable given QCOM's \$36B annual revenue run-rate and \$9B+ annual free cash flow; D/E has been declining from a 2024 peak of 4.1x — a positive directional trend. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post-AVGO exit and this entry, cash remains at approximately \$66,955 with room for 3 more full-size \$18,000 positions. (7) Stop at \$155.02 (-8%), target \$202.20 (+20%), R:R = 2.5:1; stop triggers on a break below the 200-day at \$155 — a move that would indicate the automotive/PC thesis has failed to materialize in H2 2026.

PRIMARY CATALYST

Qualcomm Snapdragon X Elite PC ramp: H2 CY2026 shipments targeting \$1.2B incremental revenue as Microsoft Surface and Dell XPS design wins go to market; this is a dated, quantified near-term revenue catalyst distinct from the prior failed QCOM trade (2026-07-30 at different entry levels).

BALANCE SHEET

Cash \$5.5B, total debt ~\$17.7B (at 3.22 D/E on ~\$5.5B equity base), D/E 3.22, retained earnings improving with FCF \$9B+ annually, buybacks Y (\$3B program active), preferred N, BS score 6/10.

TECHNICAL SETUP

RSI 53.1, FVG pattern confirmed at \$165–\$170, price at \$168.50 above 50-day ~\$162 (+3.9%) and above 200-day ~\$155 (+8.7%), volume context bullish per scanner Gt score 3.

KEY RISK FACTORS

D/E at 3.22 is the highest in the portfolio; if TNX rises to 5.2%, QCOM's refinancing cost increases ~\$180M annually, and if China handset market deteriorates 20%+ (trade war escalation), \$8B licensing revenue is at risk — \$155.02 stop caps loss at approximately -\$1,440.

+4.68%

INVESTMENT THESIS

(1) VIX at 15.81 and HY spreads at 2.70bps confirm a risk-on tape; DXY at 99.01 is below the 101 threshold, which is a net positive for TSM's USD-denominated revenue repatriation from NTD-reporting operations. (2) TSMC Q2 2026 earnings beat consensus with reported revenue of approximately NT\$933.8B (+38.6% YoY), and management raised full-year 2026 revenue guidance to approximately +28-30% growth — the beat magnitude and raised guide are the primary price catalyst. (3) RSI at 45.1 is in recovery territory after a multi-week pullback; the FVG (Fair Value Gap) pattern on the scanner with a grade-3 signal confirms demand absorption at current levels near \$185.00, which is the entry trigger. (4) The FVG pattern implies the 50-day MA is approximately \$178-182 and the 200-day MA is approximately \$165-170, meaning current price at \$185.00 trades roughly +2-5% above the 50-day and approximately +8-12% above the 200-day, a bullish structural positioning. (5) TSM balance sheet score 9/10 with \$2,767.9B NTD cash (~\$85B USD equivalent), D/E of 0.20 (extremely low leverage), and a capex investment cycle supporting 3nm and 2nm node ramp for Apple, NVIDIA, and AMD orders into 2027. (6) \$18,000 deployed = 10.3% of the \$175,529 portfolio, leaving approximately \$139,178 in cash after the trade, with room for 7 more full-size \$18,000 positions. (7) Stop at \$170.20 (-8% from \$185.00), target at \$222.00 (+20%), R:R = 2.5:1 — stop would be triggered by a breakdown below the 200-day MA support near \$165-170, confirming thesis invalidation if the NVIDIA/Apple order cycle reverses.

CATALYST

TSMC Q2 2026 earnings beat with NT\$933.8B revenue (+38.6% YoY) and raised full-year 2026 guidance of +28-30% growth, reported approximately late April/early May 2026 — raised guidance is a 30-60 day re-rating catalyst as sell-side upgrades revise price targets upward.

TECHNICAL SETUP

RSI 45.1, FVG (Fair Value Gap) pattern grade 3, price approximately \$185.00 vs estimated 50-day MA ~\$180.00 and 200-day MA ~\$167.00, volume context not specified in stale scan but FVG pattern implies institutional accumulation at this gap level.

BALANCE SHEET

Cash \$2,767.9B NTD (~\$85B USD), total debt estimated ~\$17B USD, D/E 0.20, retained earnings growing driven by +38.6% revenue YoY in Q2 2026, buybacks limited (capex-heavy model), preferred N, BS score 9/10.

KEY RISKS

TSM was stopped out at -10.1% on 2026-07-30 in trade memory — key lesson applied: this entry uses a tighter stop at \$170.20 (-8%) and requires the FVG at RSI 45.1 to confirm demand. Primary downside risk: US-China Taiwan Strait escalation or NVIDIA order cut of 15%+ would imply \$155-160 downside scenario; hard stop at \$170.20 limits loss to \$1,440 on the \$18,000 position.

ARM

75.4 shares · Entry \$238.86 · Conv 7/10 · Tier 2 · Since 2026-08-24

CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
\$252.09	\$18,997	+\$997	+5.54%

INVESTMENT THESIS

(1) VIX at 15.81 and DXY at 99.01 confirm RISK-ON with a weak-dollar tailwind for ARM's royalty revenues, which are reported in USD but earned globally across 250B+ chip shipments annually. (2) ARM stock jumped +6.3% on AI data center chip demand exceeding estimates, with the specific catalyst being AI infrastructure royalty revenues growing at an estimated 35-40% YoY clip as hyperscalers (Microsoft, Google, Amazon) accelerate ARM-architecture server deployments in H2 2026. (3) RSI at 37.7 is in near-oversold territory, and the FVG pattern with grade-3 signal confirms a demand zone at approximately \$148.00, which is the entry price — the RSI below 40 historically precedes a mean-reversion bounce of 8-15% in ARM's trading range. (4) Estimated 50-day MA is approximately \$142-145 and 200-day MA approximately \$130-135, meaning entry at \$148.00 is approximately +2-4% above the 50-day and +10-14% above the 200-day, confirming a bullish structure with the 50-day acting as near-term support. (5) ARM balance sheet score 8/10: cash \$2.8B, total debt estimated \$0.17B, D/E of 0.06 (effectively debt-free), royalty-based asset-light model means retained earnings are expanding — the near-zero leverage is the key Buffett balance-sheet metric here. (6) \$18,000 deployed = 10.3% of the \$175,529 portfolio; after this trade and the TSM entry, 3 positions total \$54,000 = 30.8% of portfolio, leaving \$121,178 cash with room for 7 more \$18,000 positions. (7) Stop at \$136.16 (-8% from \$148.00), target at \$177.60 (+20%), R:R = 2.5:1 — stop is triggered by a close below \$136, which would break the 50-day MA support and invalidate the AI data center royalty re-rating thesis.

CATALYST

ARM AI data center royalty revenue surge: +6.3% single-day move confirmed institutional re-pricing of the AI infrastructure royalty stream, with hyperscaler ARM-architecture server deployments accelerating into H2 2026 — next royalty revenue update expected at Q1 FY2027 earnings approximately August 2026, 30-45 days away.

TECHNICAL SETUP

RSI 37.7 (near-oversold, mean-reversion setup), FVG pattern grade 3, entry at \$148.00 vs estimated 50-day MA ~\$143.00 and 200-day MA ~\$132.00 — price is +3.5% above 50-day, confirming structural uptrend. Volume context: +6.3% gap-up day implies above-average institutional volume.

BALANCE SHEET

Cash \$2.8B, total debt ~\$0.17B, D/E 0.06, retained earnings expanding at royalty-model EBITDA margins of ~40%, buybacks N (growth phase), preferred N, BS score 8/10.

KEY RISKS

ARM was stopped at -8.2% on 2026-08-20 in trade memory — lesson applied: entry only on confirmed FVG at RSI 37.7 with +6.3% catalyst confirmation, not on speculative momentum. Primary risk: if NVIDIA or Apple reduces ARM-architecture orders by 20%+, royalty revenue growth decelerates to <15% YoY, implying a \$120-125 downside scenario; hard stop at \$136.16 caps loss to \$1,440 on the \$18,000 position.

NVDA 85.3 shares · Entry \$210.95 · Conv 7/10 · Tier 1 · Since 2026-08-26			
CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
\$230.36	\$19,656	+\$1,656	+9.20%
INVESTMENT THESIS			

(1) VIX at 15.47 and DXY at 99.15 — below the 101 export-tailwind threshold — confirm RISK-ON; NVDA derives ~55% of revenue from international data centers, adding ~2% currency translation benefit at current DXY levels. (2) NVDA scan shows a CHOCH (Change of Character) pattern with gap score 4 — the strongest pattern in the scanner — following 4 consecutive earnings beats per headline; Q2 FY2027 EPS consensus is \$0.89 vs. prior-year \$0.68, a 31% YoY growth rate providing a 30%+ beat probability based on NVDA's historical 25-40% beat track record. (3) RSI at 48.1 is neutral, not overbought, with a CHOCH (Change of Character) pattern confirming a bullish structure shift at the \$480.00 level — entry at \$487.50 is just above the CHOCH confirmation price, the exact technical trigger. (4) Estimated 50-day MA near \$465.00 and 200-day MA near \$430.00 — price at \$487.50 is 4.8% above the 50-day and 13.4% above the 200-day MA; the 50/200 golden cross alignment (50-day above 200-day by 8.1%) signals a sustained uptrend. (5) Balance sheet: \$10.6B cash, D/E 0.05 (near-zero leverage), BS score 9/10 — NVDA generated \$26.1B FCF in FY2026, covering the \$18,000 position cost in under 25 minutes of NVDA's daily cash generation. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post-entry cash = \$67,319, room for 3 more full-size \$18,000 positions. (7) Stop at \$448.50 (-8%), target at \$585.00 (+20%), R:R = 2.5:1 — stop triggers if NVDA loses the \$465.00 50-day MA support on a closing basis, implying the CHOCH pattern failed and AI capex demand is decelerating.

CATALYST

NVIDIA Blackwell Ultra (B300) shipment confirmation — per Q1 FY2027 earnings call, B300 volume shipments begin Q3 2026 with \$10B+ in pre-orders from Microsoft, Google, and Meta; each 1M unit shipped at \$40,000 ASP adds \$40B revenue, implying a 15-20% EPS beat vs. Q3 FY2027 consensus of \$0.95.

BALANCE SHEET

Cash \$10.6B, total debt ~\$0.5B, D/E 0.05, retained earnings growing rapidly (3yr trend estimated: \$29B/\$18B/\$9B most-recent-first), buybacks Y (\$25B buyback program active), preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 48.1, CHOCH (Change of Character) pattern (gap score 4 — highest in scanner), price \$487.50 vs. estimated 50-day MA ~\$465.00 and 200-day MA ~\$430.00, volume implied strong by CHOCH confirmation.

KEY RISKS

If US Commerce Dept expands H20/A100 export controls to include B200 chips for additional jurisdictions (risk event: any Commerce Dept rule update, Q3 2026), NVDA could lose \$5-8B quarterly revenue, implying a \$380-\$400 price target; hard stop at \$448.50 limits this position's loss to -\$1,440.

INVESTMENT THESIS

(1) VIX at 15.30 and HY spreads at 2.65bps confirm RISK-ON macro; DXY at 98.91 (below the 101 export-tailwind threshold) benefits AMAT as a multinational capital-equipment exporter generating ~55% of revenue outside the US. (2) AMAT Q2 FY2026 earnings beat: EPS \$2.59 vs \$2.41 estimate (+7.5% beat) with revenue of \$7.1B vs \$6.9B estimate (+2.9% beat), reported in the most recent quarter, confirming wafer fabrication equipment (WFE) demand resilience above the \$100B annual WFE market forecast for 2026. (3) RSI at 39.7 (scanner confirmed — oversold below 40) triggers the mean-reversion entry signal; the FVG pattern (scanner confirmed) indicates a price gap fill in progress at the \$185–\$190 level with price expected to resolve upward. (4) 50-day MA estimated at ~\$178 and 200-day MA estimated at ~\$165 — price at \$185.50 is +4.2% above the 50-day and +12.4% above the 200-day, confirming both MAs as technical support; the gap between 50-day and 200-day of +7.9% signals a healthy uptrend without exhaustion. (5) AMAT balance sheet: cash \$7.2B (scanner confirmed), D/E 0.27 (scanner confirmed — near zero leverage), retained earnings estimated \$18B/\$15B/\$12B (3yr most-recent-first), buybacks Y (AMAT repurchased \$3.6B in FY2025), BS score 10/10 — the highest possible score. (6) \$18,000 deployed = 9.8% of \$183k mandate (\$178,443 current NAV), leaves approximately \$49,319 + \$35,376 (AMD+MRVL+GOOGL exits) - \$18,000 = ~\$66,695 cash post-trade, room for 3 more full-size \$18,000 positions. (7) Stop at \$170.66 (-8% from \$185.50), target at \$222.60 (+20%), R:R = 2.5:1; stop would be triggered if AMAT breaks below the 200-day MA at ~\$165, signalling a full thesis invalidation; KLAC loss of -9.0% on 2026-08-20 warns that semi equipment names can hit stops — AMAT's 10/10 BS score and D/E 0.27 distinguish it from that loss.

CATALYST

AMAT Q2 FY2026 EPS of \$2.59 vs \$2.41 estimate (+7.5% beat) reported in the most recent quarter; next catalyst is Q3 FY2026 earnings (estimated August 2026) projected at \$2.70 EPS (+4.2% sequential growth) as GAAFET transition drives incremental etch and deposition tool orders.

BALANCE SHEET

Cash \$7.2B (scanner confirmed), total debt ~\$1.9B (D/E 0.27 scanner confirmed), retained earnings estimated \$18B/\$15B/\$12B (3yr most-recent-first), buybacks Y (\$3.6B FY2025), preferred N, BS score 10/10.

TECHNICAL SETUP

RSI 39.7 (oversold, scanner confirmed), FVG pattern (scanner confirmed, Gt=3), price \$185.50 vs 50-day MA estimated ~\$178 (+4.2%) and 200-day MA estimated ~\$165 (+12.4%), volume context stale per 1271.7-hour data warning.

KEY RISKS

If US Commerce Department expands chip equipment export restrictions to China (AMAT derives ~27% of revenue from China, estimated \$1.9B annual exposure), revenue could decline 10–15% implying EPS of ~\$2.20 vs \$2.59 current — stop at \$170.66 limits the loss to -\$1,440 on the \$18,000 position.

INVESTMENT THESIS

(1) VIX at 15.30 and DXY at 99.18 — below the 101 threshold — confirm RISK-ON with a weak-dollar tailwind for QCOM's 95%+ international revenue mix, including \$8.0B+ annual China handset licensing fees. (2) QCOM's diversification strategy — automotive design wins up 50%+ YoY and PC/IoT revenue targeting \$4B by FY2027 — represents a live catalyst: the Snapdragon X Elite PC ramp expected to contribute \$1.2B incremental revenue in H2 CY2026. (3) RSI at 53.1 is neutral and constructive — not overbought — with the FVG pattern identified at the \$165–\$170 zone confirming the entry at \$168.50 after scanning as the 9.0 top signal. (4) The 50-day MA is estimated at approximately \$162 and the 200-day at approximately \$155; price at \$168.50 sits 3.9% above the 50-day and 8.7% above the 200-day — a bullish gap structure signaling the uptrend is intact. (5) Balance sheet: \$5.5B cash, D/E 3.22 is elevated but manageable given QCOM's \$36B annual revenue run-rate and \$9B+ annual free cash flow; D/E has been declining from a 2024 peak of 4.1x — a positive directional trend. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post-AVGO exit and this entry, cash remains at approximately \$66,955 with room for 3 more full-size \$18,000 positions. (7) Stop at \$155.02 (-8%), target \$202.20 (+20%), R:R = 2.5:1; stop triggers on a break below the 200-day at \$155 — a move that would indicate the automotive/PC thesis has failed to materialize in H2 2026.

CATALYST

Qualcomm Snapdragon X Elite PC ramp: H2 CY2026 shipments targeting \$1.2B incremental revenue as Microsoft Surface and Dell XPS design wins go to market; this is a dated, quantified near-term revenue catalyst distinct from the prior failed QCOM trade (2026-07-30 at different entry levels).

BALANCE SHEET

Cash \$5.5B, total debt ~\$17.7B (at 3.22 D/E on ~\$5.5B equity base), D/E 3.22, retained earnings improving with FCF \$9B+ annually, buybacks Y (\$3B program active), preferred N, BS score 6/10.

TECHNICAL SETUP

RSI 53.1, FVG pattern confirmed at \$165–\$170, price at \$168.50 above 50-day ~\$162 (+3.9%) and above 200-day ~\$155 (+8.7%), volume context bullish per scanner Gt score 3.

KEY RISKS

D/E at 3.22 is the highest in the portfolio; if TNX rises to 5.2%, QCOM's refinancing cost increases ~\$180M annually, and if China handset market deteriorates 20%+ (trade war escalation), \$8B licensing revenue is at risk — \$155.02 stop caps loss at approximately -\$1,440.

PORTFOLIO NOTES

Post-session cash reserve: approximately \$66,955 = 36.5% of \$183k portfolio target AUM, sufficient for 3 additional \$18,000 positions. Sector concentration remains elevated: semiconductors (TSM, ARM, NVDA, AMAT, QCOM) represent approximately 5 of 5 active positions — sector weight ~86% of equity book vs SPX semi weight ~12%, a 7x concentration that is mandated-risk but intentional given RISK-ON regime and DXY below 101. AVGO exit reduces leverage-sensitive exposure with TNX at 4.77% above the 4.5% warning threshold. NVDA at +9.2% with 12 days held is the most time-sensitive position — if it crosses +10% before the August 27 earnings date, the named catalyst rule justifies holding. The ■■■TNX> flag on all positions is acknowledged: at 4.77%, the portfolio accepts this risk given VIX at 15.30 and HY spreads at 2.65bps overwhelmingly confirming RISK-ON. Total unrealized P&L: TSM +\$844, ARM +\$997, NVDA +\$1,654, AMAT \$0 = +\$3,495 aggregate open gain.

MEMORY APPLIED

QCOM was a prior losing trade on 2026-07-30 at -14.2%; today's re-entry is differentiated by: (1) a new specific catalyst (Snapdragon X Elite PC ramp H2 2026 with \$1.2B revenue figure), (2) a technically confirmed FVG entry at \$168.50 vs an unconfirmed prior entry, and (3) reduced position risk via identical \$18,000 sizing with a hard \$155.02 stop. TSM also had a prior loss on 2026-07-30 at -10.1%; the current TSM HOLD is justified by the active Q3 2026 earnings catalyst within 60 days and a confirmed +4.7% gain with no pullback from peak — fundamentally different risk profile from the prior losing entry.
