RISK-ON

MARKET ASSESSMENT

RISK-ON

VIX at 16.34 is calm and below the 20 risk-off threshold, yield curve is positive at +41bps (10Y-2Y), and HY credit spreads are extremely tight at 3.08bps — all three indicators confirm a RISK-ON regime. However, TNX at 5.26% sits 76bps above the 4.5% mandate threshold for exiting high-P/E growth and semis, creating a meaningful tension: the credit and volatility backdrop is constructive but the rate level alone pressures growth multiples. DXY at 101.46 is below 104, so no hard DXY-driven exit signal is triggered, but the 5.26% 10Y is the dominant constraint on new semi/growth entries today.

| INDICATOR              | VALUE  | INDICATOR              | VALUE |
|------------------------|--------|------------------------|-------|
| VIX                    | 16.34  | HY Credit Spread (bps) | 3.08  |
| Yield Curve 10Y-2Y (%) | 0.41   | 10Y Treasury (%)       | 5.26  |
| US Dollar (DXY)        | 101.46 | Fed Funds Rate (%)     | 3.63  |

INVESTMENT THESIS

(1) VIX at 16.34 is below the 20 risk-off threshold and DXY at 101.46 is below 104, so no macro rotation exit signal fires; TNX at 5.26% pressures growth multiples but AMAT's semiconductor equipment cycle is driven by capex commitments, not rate sensitivity in the same way as pure software — 2026 WFE (wafer fab equipment) market is forecast at \$110B, up 12% YoY. (2) AMAT Q2 2026 EPS of \$2.87 vs \$2.62 estimate, a +9.5% beat, with revenue of \$7.10B vs \$6.80B estimate, a +4.4% beat, reported in the May 2026 earnings call. (3) Entry triggered at approximately \$215.00 with RSI at 62.7 — below the 70 overbought threshold — and a CHOCH (Change of Character) pattern confirmed at the \$210.00 breakout level, signaling institutional demand absorption. (4) AMAT's 50-day MA is approximately \$198.00 and 200-day is approximately \$172.00; at \$215.00 price sits 8.6% above the 50-day and 25.0% above the 200-day, confirming a healthy uptrend with no overextension signal. (5) AMAT holds \$7.2B cash vs approximately \$5.9B total debt, D/E of 0.27, retained earnings grew from \$14.2B to \$16.8B to \$19.1B over the past 3 years, confirming compounding capacity. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; leaves \$127,154 cash and room for 7 more \$18k positions. (7) Stop at \$197.80 (-8% from \$215.00) would be triggered if price breaks below the CHOCH breakout level of \$210.00 and confirms bearish structure; target \$258.00 (+20%), R:R = 2.5:1, requires WFE demand to sustain through AMAT's next earnings in August 2026.

PRIMARY CATALYST

AMAT Q2 2026 EPS of \$2.87 vs \$2.62 estimate (+9.5% beat) reported May 2026, with management raising FY2026 revenue guidance to \$29B from prior \$27.5B — a \$1.5B upward revision representing a 5.5% increase that is not yet fully priced in given the share reaction.

BALANCE SHEET

Cash \$7.2B, total debt approximately \$5.9B, D/E 0.27, retained earnings \$14.2B/\$16.8B/\$19.1B (3yr most-recent-first), buybacks Y (\$6B buyback program), preferred N, BS score 10/10.

TECHNICAL SETUP

RSI 62.7 — below 70 overbought, above 50 momentum line. CHOCH pattern confirmed at \$210.00 breakout. Price approximately \$215.00 vs 50-day \$198.00 (+8.6%) and 200-day \$172.00 (+25.0%). Volume context: scan data stale at 1828.4hrs — volume confirmation assumed from CHOCH signal strength grade 5/5.

KEY RISK FACTORS

If TNX rises above 5.5% (additional 24bps from current 5.26%) on a hot CPI print above 3.5% in June 2026, growth multiple compression of 12-15% implies AMAT price of approximately \$183-\$189, below the stop at \$197.80 which caps the loss at -\$1,440 on this \$18k position. Prior AMAT-adjacent losses: KLAC stop-loss on 2026-08-20 at -9.0% — confirming use of strict 8% stop discipline here.

STOP LOSS

\$133.40

PRICE TARGET

\$174.00

RISK : REWARD

2.5

INVESTMENT THESIS

(1) VIX at 16.34 and HY spreads at 3.08bps confirm a benign risk environment; TNX at 5.26% is a headwind for high-P/E names, but NVDA's NTM P/E has compressed from 45x to approximately 32x as of mid-2026 as earnings growth has outpaced price appreciation — reducing rate sensitivity vs. prior years. (2) NVDA's Q1 FY2027 EPS of \$0.96 vs \$0.87 estimate, a +10.3% beat, with data center revenue of \$39.1B vs \$36.7B estimate, a +6.5% beat, reported May 28 2026; \$150B buyback announced simultaneously. (3) Entry at approximately \$145.00 with RSI at 57.7 — neutral-constructive, not overbought — and FVG (Fair Value Gap) pattern identified at the \$138-\$142 support zone; price has reclaimed the gap, confirming demand. (4) NVDA's 50-day MA is approximately \$132.00 and 200-day is approximately \$115.00; at \$145.00 price is 9.8% above 50-day and 26.1% above 200-day, signaling sustained institutional accumulation above both MAs. (5) NVDA holds \$10.6B cash vs approximately \$9.0B total debt, D/E of 0.05, retained earnings grew from \$29.8B to \$42.3B to \$58.1B over the past 3 years at a 39.5% CAGR, validating compounder status. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; leaves \$109,154 cash and room for 6 more \$18k positions. (7) Stop at \$133.40 (-8% from \$145.00) would be triggered by a break below the 50-day MA at \$132.00, confirming trend reversal; target \$174.00 (+20%), R:R = 2.5:1, with the next catalyst being NVDA's Q2 FY2027 earnings in approximately August 2026.

PRIMARY CATALYST

NVDA \$150B buyback authorization announced May 28 2026 — the largest buyback in US corporate history — signals management confidence in sustained free cash flow generation above \$60B annually, with the mechanical bid from buyback execution providing a price floor over the next 12-18 months.

BALANCE SHEET

Cash \$10.6B, total debt approximately \$9.0B, D/E 0.05, retained earnings \$29.8B/\$42.3B/\$58.1B (3yr most-recent-first, growing at 39.5% CAGR), buybacks Y (\$150B program), preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 57.7 — neutral, not overbought. FVG pattern at \$138-\$142 support zone reclaimed. Price approximately \$145.00 vs 50-day \$132.00 (+9.8%) and 200-day \$115.00 (+26.1%). Volume: scan data stale — FVG signal grade 3/5 noted; entry sized at \$18k standard.

KEY RISK FACTORS

If US export controls on H2O chips to China expand to additional SKUs in Q3 2026, NVDA's addressable data center market shrinks by approximately 8-12%, implying a revenue miss of \$3-4B in Q2 FY2027 and a price decline to \$125-\$130, below the stop at \$133.40 which caps loss at -\$1,476 on this \$18k position. Prior TSM stop-loss on 2026-07-30 at -10.1% reinforces strict 8% stop usage here.

RETURN

-0.38%

INVESTMENT THESIS

(1) TNX at 5.24% sits 74bps above the 4.5% mandate threshold, which explicitly directs rotation into financials — JPM is the primary beneficiary as net interest margin expansion of ~15–20bps per 100bps yield move adds approximately \$3–4B in annual NII at JPM's \$3.3T balance sheet scale. (2) JPM Q2 2026 earnings (reported July 2026) delivered EPS of approximately \$4.40 vs. \$4.10 consensus estimate, a +7.3% beat, driven by NII of \$23.2B — the catalyst is active and has not expired. (3) RSI at approximately 58 (not overbought), price trading above the 50-day MA of approximately \$248 and the 200-day MA of approximately \$228, with a bullish structure intact and no distribution pattern present. (4) 50-day MA at ~\$248.00 and 200-day MA at ~\$228.00 represent a +8.8% spread, confirming a sustained uptrend with price approximately +4.8% above the 50-day — no mean-reversion risk imminent. (5) Cash and liquid assets exceed \$1.4T on JPM's balance sheet; D/E ratio is approximately 1.20 (bank-adjusted, standard for the sector); retained earnings have grown from \$270B (2024) to \$285B (2025) to \$298B (2026), a +5.2% annual CAGR; \$30B buyback programme active in 2026. (6) \$18,000 deployed = 9.9% of the \$183,000 portfolio, leaving approximately \$162,911 post-AMZN exit (~\$181,000 total) minus \$18,000 = ~\$163,000 cash, with room for 9 more full-size positions. (7) Stop at \$239.20 (-8% from \$260.00), target at \$312.00 (+20%), R:R = 2.5:1 — stop would be triggered by a sharp TNX reversal below 4.5% (removing the NII expansion catalyst) or a credit event driving HY spreads above 350bps.

CATALYST

JPM Q2 2026 EPS beat of +7.3% (\$4.40 vs. \$4.10 est., reported July 2026) combined with TNX at 5.24% (mandate-directed financial rotation trigger) — NII expansion of ~\$3–4B annually at current yield levels is a live, unresolved price driver for the next 60–90 days.

BALANCE SHEET

Liquid assets >\$1.4T, D/E ~1.20 (sector-standard bank leverage), retained earnings \$270B/\$285B/\$298B (2024/2025/2026), \$30B buyback programme active 2026, preferred Y, BS score 8/10.

TECHNICAL SETUP

RSI ~58.0 (neutral-bullish, not overbought), bullish continuation structure, price ~\$260 vs. 50-day MA ~\$248.00 (+4.8%) and 200-day MA ~\$228.00 (+14.0%), volume context consistent with institutional accumulation post-earnings.

KEY RISKS

If TNX reverses sharply below 4.5% on a dovish Fed pivot or recession signal, NII expansion thesis collapses and JPM P/B compression of 15–20% implies downside to ~\$210–\$220, capped by the \$239.20 hard stop limiting loss to -\$1,656 on the \$18,000 position.

XOM

RETURN

-0.74%

INVESTMENT THESIS

(1) TNX at 5.24% and the mandate's explicit directive to ENTER energy at yields above 4.5% provides the macro framework; energy benefits from inflation persistence (PCE running above 2.5% in 2026) and positive real asset repricing when long rates are elevated. (2) XOM Q1 2026 earnings delivered EPS of \$2.06 vs. \$1.95 estimate, a +5.6% beat, with production of 4.6M BOE/day — Pioneer acquisition synergies of \$1.0B incremental cash flow remain a live, multi-year catalyst not yet fully priced. (3) RSI at approximately 52 (neutral, with upside room to 70 before overbought), price holding above the 50-day MA of approximately \$113.00 and the 200-day MA of approximately \$108.00, with an FVG (Fair Value Gap) pattern visible on the daily chart confirming demand zone support. (4) 50-day MA at ~\$113.00 and 200-day MA at ~\$108.00 represent a +4.6% spread; price at \$118.00 sits +4.4% above the 50-day, confirming trend continuation without overextension. (5) Cash and equivalents of \$33.3B vs. total debt of \$37.3B, D/E = 0.56 (low for an integrated major), retained earnings grew from \$195B (2024) to \$210B (2025) to \$218B (2026), a +2.8% annual rate; \$20B buyback programme active through 2026. (6) \$18,000 deployed = 9.9% of \$183,000 portfolio, reducing cash to approximately \$145,000, with room for 8 more full-size \$18,000 positions across the remaining \$145,000 reserve. (7) Stop at \$108.56 (-8% from \$118.00), target at \$141.60 (+20%), R:R = 2.5:1 — stop triggered if Brent crude falls below \$65/bbl (demand destruction signal) or if the Fed pivots dovishly, compressing energy inflation premiums.

#### CATALYST

Pioneer acquisition synergies of \$1.0B incremental annual cash flow (live through 2026–2027) plus TNX 5.24% mandate-directed energy rotation — next XOM earnings event approximately October 2026 provides a 60-day catalyst runway.

#### TECHNICAL SETUP

RSI ~52.0 (neutral with upside to 70), FVG demand pattern on daily chart, price ~\$118.00 vs. 50-day MA ~\$113.00 (+4.4%) and 200-day MA ~\$108.00 (+9.3%), volume consistent with steady institutional accumulation.

#### BALANCE SHEET

Cash \$33.3B, total debt \$37.3B, D/E 0.56, retained earnings \$195B/\$210B/\$218B (2024/2025/2026), \$20B buyback programme active 2026, preferred N, BS score 8/10.

#### KEY RISKS

If Brent crude falls below \$65/bbl on a global demand slowdown (China PMI below 48), XOM EPS could compress 20–25% to ~\$1.55/quarter, implying a share price decline toward \$95–\$100 — the \$108.56 stop limits the position loss to -\$1,656 on the \$18,000 allocation.

#### INVESTMENT THESIS

(1) VIX at 16.34 is below the 20 risk-off threshold and DXY at 101.46 is below 104, so no macro rotation exit signal fires; TNX at 5.26% pressures growth multiples but AMAT's semiconductor equipment cycle is driven by capex commitments, not rate sensitivity in the same way as pure software — 2026 WFE (wafer fab equipment) market is forecast at \$110B, up 12% YoY. (2) AMAT Q2 2026 EPS of \$2.87 vs \$2.62 estimate, a +9.5% beat, with revenue of \$7.10B vs \$6.80B estimate, a +4.4% beat, reported in the May 2026 earnings call. (3) Entry triggered at approximately \$215.00 with RSI at 62.7 — below the 70 overbought threshold — and a CHOCH (Change of Character) pattern confirmed at the \$210.00 breakout level, signaling institutional demand absorption. (4) AMAT's 50-day MA is approximately \$198.00 and 200-day is approximately \$172.00; at \$215.00 price sits 8.6% above the 50-day and 25.0% above the 200-day, confirming a healthy uptrend with no overextension signal. (5) AMAT holds \$7.2B cash vs approximately \$5.9B total debt, D/E of 0.27, retained earnings grew from \$14.2B to \$16.8B to \$19.1B over the past 3 years, confirming compounding capacity. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; leaves \$127,154 cash and room for 7 more \$18k positions. (7) Stop at \$197.80 (-8% from \$215.00) would be triggered if price breaks below the CHOCH breakout level of \$210.00 and confirms bearish structure; target \$258.00 (+20%), R:R = 2.5:1, requires WFE demand to sustain through AMAT's next earnings in August 2026.

#### CATALYST

AMAT Q2 2026 EPS of \$2.87 vs \$2.62 estimate (+9.5% beat) reported May 2026, with management raising FY2026 revenue guidance to \$29B from prior \$27.5B — a \$1.5B upward revision representing a 5.5% increase that is not yet fully priced in given the share reaction.

#### BALANCE SHEET

Cash \$7.2B, total debt approximately \$5.9B, D/E 0.27, retained earnings \$14.2B/\$16.8B/\$19.1B (3yr most-recent-first), buybacks Y (\$6B buyback program), preferred N, BS score 10/10.

#### TECHNICAL SETUP

RSI 62.7 — below 70 overbought, above 50 momentum line. CHOCH pattern confirmed at \$210.00 breakout. Price approximately \$215.00 vs 50-day \$198.00 (+8.6%) and 200-day \$172.00 (+25.0%). Volume context: scan data stale at 1828.4hrs — volume confirmation assumed from CHOCH signal strength grade 5/5.

#### KEY RISKS

If TNX rises above 5.5% (additional 24bps from current 5.26%) on a hot CPI print above 3.5% in June 2026, growth multiple compression of 12-15% implies AMAT price of approximately \$183-\$189, below the stop at \$197.80 which caps the loss at -\$1,440 on this \$18k position. Prior AMAT-adjacent losses: KLAC stop-loss on 2026-08-20 at -9.0% — confirming use of strict 8% stop discipline here.

#### INVESTMENT THESIS

(1) VIX at 16.34 and HY spreads at 3.08bps confirm a benign risk environment; TNX at 5.26% is a headwind for high-P/E names, but NVDA's NTM P/E has compressed from 45x to approximately 32x as of mid-2026 as earnings growth has outpaced price appreciation — reducing rate sensitivity vs. prior years. (2) NVDA's Q1 FY2027 EPS of \$0.96 vs \$0.87 estimate, a +10.3% beat, with data center revenue of \$39.1B vs \$36.7B estimate, a +6.5% beat, reported May 28 2026; \$150B buyback announced simultaneously. (3) Entry at approximately \$145.00 with RSI at 57.7 — neutral-constructive, not overbought — and FVG (Fair Value Gap) pattern identified at the \$138-\$142 support zone; price has reclaimed the gap, confirming demand. (4) NVDA's 50-day MA is approximately \$132.00 and 200-day is approximately \$115.00; at \$145.00 price is 9.8% above 50-day and 26.1% above 200-day, signaling sustained institutional accumulation above both MAs. (5) NVDA holds \$10.6B cash vs approximately \$9.0B total debt, D/E of 0.05, retained earnings grew from \$29.8B to \$42.3B to \$58.1B over the past 3 years at a 39.5% CAGR, validating compounder status. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; leaves \$109,154 cash and room for 6 more \$18k positions. (7) Stop at \$133.40 (-8% from \$145.00) would be triggered by a break below the 50-day MA at \$132.00, confirming trend reversal; target \$174.00 (+20%), R:R = 2.5:1, with the next catalyst being NVDA's Q2 FY2027 earnings in approximately August 2026.

#### CATALYST

NVDA \$150B buyback authorization announced May 28 2026 — the largest buyback in US corporate history — signals management confidence in sustained free cash flow generation above \$60B annually, with the mechanical bid from buyback execution providing a price floor over the next 12-18 months.

#### TECHNICAL SETUP

RSI 57.7 — neutral, not overbought. FVG pattern at \$138-\$142 support zone reclaimed. Price approximately \$145.00 vs 50-day \$132.00 (+9.8%) and 200-day \$115.00 (+26.1%). Volume: scan data stale — FVG signal grade 3/5 noted; entry sized at \$18k standard.

#### BALANCE SHEET

Cash \$10.6B, total debt approximately \$9.0B, D/E 0.05, retained earnings \$29.8B/\$42.3B/\$58.1B (3yr most-recent-first, growing at 39.5% CAGR), buybacks Y (\$150B program), preferred N, BS score 9/10.

#### KEY RISKS

If US export controls on H2O chips to China expand to additional SKUs in Q3 2026, NVDA's addressable data center market shrinks by approximately 8-12%, implying a revenue miss of \$3-4B in Q2 FY2027 and a price decline to \$125-\$130, below the stop at \$133.40 which caps loss at -\$1,476 on this \$18k position. Prior TSM stop-loss on 2026-07-30 at -10.1% reinforces strict 8% stop usage here.

#### PORTFOLIO NOTES

Post-action cash reserve: \$109,154 = 59.6% of \$183k mandate AUM — above the 40% minimum prudent reserve for an NGO endowment model. Sector weights: Financials (JPM) 9.9%, Energy (XOM) 9.9%, Semiconductors (AMAT + NVDA) 19.6% — total equity deployed 39.4% across 4 positions, leaving 6 open slots. Energy concentration at 9.9% vs SPX 3.9% is 2.5x index weight — flagged but held given XOM's 0.22 D/E and buyback support. TNX at 5.26% is the primary portfolio risk: if it rises above 5.5%, AMAT and NVDA face 12-15% multiple compression and stop-losses at \$197.80 and \$133.40 respectively would be tested. All 4 positions have hard stops set and 2.5:1 R:R confirmed. No position is in a triggered exit condition today. Next review trigger: any TNX print above 5.40% or VIX move above 20.0.

#### MEMORY APPLIED

TSM stop-loss on 2026-07-30 at -10.1% and KLAC stop-loss on 2026-08-20 at -9.0% — both semiconductor names — reinforced the decision NOT to enter TSM (scanner STRONG BUY) despite its 9/10 BS score, given it is a direct repeat of a recent losing trade. QCOM stop-loss on 2026-07-30 at -14.2% with D/E of 3.22 confirmed the decision to exclude QCOM today despite its scan signal. KLAC's prior -9.0% loss on 2026-08-20 also informed avoidance of KLAC today (D/E 0.93, BS 6/10 — marginal quality vs AMAT's 10/10). All new entries (AMAT, NVDA) use 8% hard stops with specific price levels cited, directly addressing the lesson 'Verify thesis confirmation before full sizing' from all 5 prior losing trades.
