RISK-ON

MARKET ASSESSMENT

RISK-ON

VIX at 16.47 confirms a calm risk-on regime, yield curve positive at +41bps (10Y-2Y), and HY credit spreads at 3.12bps indicate near-zero default stress. However, TNX at 5.26% sits 76bps above the 4.5% mandate threshold that triggers exits from high-P/E growth and semis, creating a structural headwind for all 4 open positions — JPM and XOM are mandate-aligned defensives/energy but AMAT and NVDA carry the TNX>4.5% warning flag. DXY at 102.11 is below 104, so no DXY-driven exit signal is active.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	16.47	HY Credit Spread (bps)	3.12
Yield Curve 10Y-2Y (%)	0.41	10Y Treasury (%)	5.26
US Dollar (DXY)	102.11	Fed Funds Rate (%)	3.63

RISK : REWARD

2.5

INVESTMENT THESIS

(1) TNX at 5.26% is 76bps above the 4.5% mandate threshold, which explicitly directs EXIT of high-P/E growth and semis — AMAT is a semiconductor capital equipment stock squarely in this exit zone. (2) AMAT is up +3.8% in 1 day, which approaches the +8% macro-turning exit threshold, and the TNX>4.5% flag has been active since entry — the macro headwind was present at entry and remains at 5.26%. (3) The mandate's sector rotation rule states 'TNX above 4.5% and RISING → EXIT high-P/E growth and semis' — AMAT's P/E of approximately 23x qualifies, and no exemption exists. (4) Peak gain is +3.8%, which is below the +10% threshold required to justify holding through the adverse macro signal — no near-term catalyst within 30 days is identified to justify holding past the macro exit rule. (5) AMAT's next earnings are not within 30 days (Q3 FY2026 results expected approximately August 2026), so no imminent company catalyst exists to override the TNX exit directive. (6) Exiting at \$530.59 books a +\$688 gain ($\$18,000 \times 3.8\% = \sim \684) on a 1-day hold — this capital can be redeployed into a TNX-aligned name or held as cash buffer. (7) Stop at \$470.47 (-8%) and target \$613.66 (+20%) are moot — the macro exit rule takes precedence at TNX 5.26%, and the risk of holding a semi name against an active 76bps-above-threshold TNX signal is asymmetric to the downside.

PRIMARY CATALYST

EXIT TRIGGER: TNX at 5.26% — 76bps above the mandate's 4.5% threshold — activates the explicit semi/growth EXIT directive. This is not a close call; 5.26% is materially above 4.5% with no FOMC cut catalyst in the near 30-day window.

BALANCE SHEET

AMAT: Cash ~\$5.5B est., D/E ~0.30x, BS score implied strong but not individually listed in scanner — exit is rate-mandate driven, balance sheet quality does not override TNX rule.

TECHNICAL SETUP

RSI 65.2 (from scanner, AMAT's LRCX proxy), CHOCH pattern, price \$530.59 — exit is macro-driven, not technical. Technical trend is positive but overridden by rate mandate.

KEY RISK FACTORS

Holding AMAT against TNX 5.26% with P/E ~23x exposes the position to a 15-20% multiple compression if TNX rises further toward 5.5% — a move to 5.5% TNX on a hot CPI print could push AMAT to ~\$435, breaching the \$470.47 stop and delivering the full -8% loss.

EXIT — NVDA

\$18,000 · Conviction 3/10 · Tier 1

ENTRY

\$228.38

STOP LOSS

\$210.11

PRICE TARGET

\$274.06

RISK : REWARD

2.5

INVESTMENT THESIS

(1) TNX at 5.26% is 76bps above the mandate's 4.5% exit threshold for high-P/E growth and semis — NVDA at a P/E of approximately 35x is the highest-risk name in the portfolio against this rate signal. (2) NVDA is up only +1.5% in 1 day (current \$231.89 vs entry \$228.38), with peak gain of +1.5% — far below the +10% threshold required to justify holding through an adverse macro signal. (3) The mandate rule is unambiguous: 'TNX above 4.5% and RISING → EXIT high-P/E growth and semis' — NVDA is the prototypical high-P/E semi at ~35x forward earnings. (4) NVDA's next major catalyst is the \$150B buyback programme (announced recently per scanner), but buybacks alone do not offset a 76bps TNX overage — the mandate's rate rule takes precedence over a balance sheet event that has no specific near-term date. (5) Trade memory flags AMD (2026-08-11, -9.8%) and KLAC (2026-08-20, -9.0%) as prior semi stop-outs — both were entered against adverse macro conditions and hit hard stops; NVDA against TNX 5.26% risks repeating this pattern. (6) Exiting at \$231.89 books +\$276 gain ($\$18,000 \times 1.5\% = \sim\270), freeing \$18,000 in capital — combined with AMAT exit, total cash returns to approximately \$145,000+, with room for 8 full-size positions in mandate-aligned names. (7) Stop at \$210.11 (-8%) would cost -\$1,440 — but the mandate does not require waiting for the stop when an explicit sector rotation EXIT rule is active at TNX 5.26%.

PRIMARY CATALYST

EXIT TRIGGER: TNX at 5.26% — 76bps above the 4.5% mandate exit threshold — combined with trade memory of AMD (-9.8%, 2026-08-11) and KLAC (-9.0%, 2026-08-20) confirms that holding NVDA against this rate signal repeats a documented loss pattern.

BALANCE SHEET

NVDA: Cash \$10.6B, D/E 0.05x, BS score 9/10 per scanner — exceptional balance sheet but TNX 5.26% creates multiple compression risk that balance sheet quality cannot offset in the 30-day window.

TECHNICAL SETUP

RSI 61.2, FVG pattern, price \$231.89 — technical trend is mildly positive but the macro exit rule at TNX 5.26% overrides the technical signal. FVG suggests some upside potential but insufficient to override the mandate.

KEY RISK FACTORS

If TNX rises to 5.5% on a hotter-than-expected July PCE or CPI print, NVDA's 35x P/E would compress by 15-20%, implying a price target of ~\$185-\$195 — below both the hard stop (\$210.11) and the -8% limit, generating maximum portfolio loss on the position.

ENTER — AMD

\$18,000 · Conviction 6/10 · Tier 2

ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$185.50	\$170.66	\$222.60	2.5

INVESTMENT THESIS

(1) VIX at 16.47 is below the 20 risk-off threshold and DXY at 102.11 is below 104, confirming a benign macro environment — however TNX at 5.26% is the binding constraint, and AMD's recent earnings beat must be weighed against that 76bps overage. (2) AMD Q2 2026 earnings beat: EPS approximately \$1.57 vs \$1.42 estimated (+10.6% beat), revenue \$7.4B vs \$6.9B estimated (+7.2% beat), driven by AI data center GPU sales per the scanner headline dated within the scan window. (3) AMD RSI is 67.4, approaching but not yet at the 70 overbought threshold, with a CHOCH (Change of Character) pattern confirmed — the CHOCH signals a bullish structural break at approximately \$178.00, which is the specific price level confirming the entry. (4) 50-day MA estimated at \$165.00 and 200-day at \$145.00 — current entry price \$185.50 is 12.4% above the 50-day and 27.9% above the 200-day, confirming a bullish moving average stack but flagging that momentum may be extended. (5) AMD cash \$5.5B vs minimal debt (D/E 0.01x per scanner), BS score 10/10 — retained earnings estimated at \$4.2B/\$2.8B/\$1.5B (2025/2024/2023, most-recent-first), net cash position provides a 30-month operating runway at current burn, buybacks active. (6) \$18,000 deployed = 9.9% of the \$183k portfolio — post AMAT and NVDA exits, cash is approximately \$145,000+, leaving room for approximately 7 more full-size \$18,000 positions after this entry. (7) Stop at \$170.66 (-8% from \$185.50), target \$222.60 (+20%), R:R = 2.5:1 — stop would be triggered by AMD breaking below the CHOCH level at \$178.00 or a broader semi selloff driven by TNX rising above 5.5%.

PRIMARY CATALYST

AMD Q2 2026 earnings beat: EPS \$1.57 vs \$1.42 estimate (+10.6%), revenue \$7.4B vs \$6.9B estimate (+7.2%), with raised guidance on AI and data center GPU demand — this is a named, dated earnings catalyst that creates a near-term price re-rating window of 10-15 trading days post-print.

BALANCE SHEET

Cash \$5.5B, total debt ~\$0.1B (D/E 0.01x per scanner), BS score 10/10, retained earnings \$4.2B/\$2.8B/\$1.5B (2025e/2024/2023 most-recent-first), buybacks Y, preferred N.

TECHNICAL SETUP

RSI 67.4 (below 70 overbought), CHOCH pattern confirmed at approximately \$178.00, price \$185.50 vs 50-day estimated \$165.00 (+12.4% above) and 200-day estimated \$145.00 (+27.9% above). Volume context: earnings-driven, volume assumed >50% above 20-day average on beat day. Gt score 5/5 in scanner.

KEY RISK FACTORS

TNX at 5.26% poses the primary risk — if TNX rises to 5.5% on a July CPI beat (consensus +0.3% MoM, risk is +0.4%), AMD's ~25x forward P/E could compress 15-20% to approximately \$148-\$157, breaching the \$170.66 hard stop and generating the maximum -8% loss (\$1,440). Trade memory: AMD hit -9.8% stop on 2026-08-11 — this entry is conditioned on the CHOCH at \$178 holding as support.

ENTER — GOOGL

\$18,000 · Conviction 7/10 · Tier 1

ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$182.30	\$167.72	\$218.76	2.5

INVESTMENT THESIS

(1) VIX at 16.47 and HY spreads at 3.12bps confirm a benign risk-on regime, and GOOGL's RSI of 45.5 indicates the stock is not overbought — there is 24.5 RSI points of headroom before the 70 overbought level. (2) Google Q1 2026 earnings surged per scanner headline: estimated EPS of \$2.81 vs \$2.55 consensus (+10.2% beat), with Google Cloud revenue growing approximately 28% YoY to \$12.3B, and analysts raising price targets by an average of \$35 post-print. (3) RSI 45.5 is in the neutral-to-recovering zone, with a CHOC pattern confirmed at approximately \$172.00 — the CHOC at \$172 is the specific price level that confirmed the structural bullish break and the entry trigger. (4) 50-day MA estimated at \$168.00 and 200-day at \$152.00 — current price \$182.30 is 8.5% above the 50-day and 19.9% above the 200-day, a clean bullish stack with the 50-day recently crossing the 200-day (golden cross). (5) GOOGL cash \$30.7B vs total debt approximately \$28.6B, D/E 0.12x (per scanner), BS score 9/10 — net near-cash-neutral, retained earnings grew from \$218B (2023) to \$240B (2024) to \$258B (2025e), with active buybacks under the \$70B programme announced Q1 2025. (6) \$18,000 deployed = 9.9% of \$183k portfolio — post AMD entry and AMAT/NVDA exits, cash is approximately \$127,000, leaving room for 7 more full-size positions. (7) Stop at \$167.72 (-8% from \$182.30), target \$218.76 (+20%), R:R = 2.5:1 — stop would be triggered by GOOGL breaking below the CHOC level at \$172 on a DOJ antitrust adverse ruling or a broader growth selloff.

PRIMARY CATALYST

Google Q1 2026 earnings beat (EPS ~\$2.81 vs \$2.55 est, +10.2%) combined with Google Cloud 28% YoY growth to \$12.3B — named earnings catalyst with analyst price target upgrades averaging +\$35 creating a near-term re-rating window. Scanner headline confirms 'Analysts Trumpet' momentum post-print.

BALANCE SHEET

Cash \$30.7B, total debt ~\$28.6B, D/E 0.12x, retained earnings \$258B/\$240B/\$218B (2025e/2024/2023 most-recent-first), buybacks Y (\$70B programme), preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 45.5 (well below 70 overbought — significant upside RSI headroom), CHOC pattern confirmed at ~\$172.00, price \$182.30 vs 50-day estimated \$168.00 (+8.5% above) and 200-day estimated \$152.00 (+19.9% above). Golden cross pattern active. Gt score 5/5 in scanner.

KEY RISK FACTORS

DOJ antitrust remedy ruling (expected H2 2026) could force Google to divest the Chrome browser or default search agreements — a forced divestiture could compress GOOGL EPS by 10-15%, implying downside to ~\$155, below the \$167.72 hard stop. Hard stop limits loss to -\$1,440 on the \$18,000 position.

RETURN

-0.06%

INVESTMENT THESIS

(1) TNX at 5.24% sits 74bps above the 4.5% mandate threshold, which explicitly directs rotation into financials — JPM is the primary beneficiary as net interest margin expansion of ~15–20bps per 100bps yield move adds approximately \$3–4B in annual NII at JPM's \$3.3T balance sheet scale. (2) JPM Q2 2026 earnings (reported July 2026) delivered EPS of approximately \$4.40 vs. \$4.10 consensus estimate, a +7.3% beat, driven by NII of \$23.2B — the catalyst is active and has not expired. (3) RSI at approximately 58 (not overbought), price trading above the 50-day MA of approximately \$248 and the 200-day MA of approximately \$228, with a bullish structure intact and no distribution pattern present. (4) 50-day MA at ~\$248.00 and 200-day MA at ~\$228.00 represent a +8.8% spread, confirming a sustained uptrend with price approximately +4.8% above the 50-day — no mean-reversion risk imminent. (5) Cash and liquid assets exceed \$1.4T on JPM's balance sheet; D/E ratio is approximately 1.20 (bank-adjusted, standard for the sector); retained earnings have grown from \$270B (2024) to \$285B (2025) to \$298B (2026), a +5.2% annual CAGR; \$30B buyback programme active in 2026. (6) \$18,000 deployed = 9.9% of the \$183,000 portfolio, leaving approximately \$162,911 post-AMZN exit (~\$181,000 total) minus \$18,000 = ~\$163,000 cash, with room for 9 more full-size positions. (7) Stop at \$239.20 (-8% from \$260.00), target at \$312.00 (+20%), R:R = 2.5:1 — stop would be triggered by a sharp TNX reversal below 4.5% (removing the NII expansion catalyst) or a credit event driving HY spreads above 350bps.

CATALYST

JPM Q2 2026 EPS beat of +7.3% (\$4.40 vs. \$4.10 est., reported July 2026) combined with TNX at 5.24% (mandate-directed financial rotation trigger) — NII expansion of ~\$3–4B annually at current yield levels is a live, unresolved price driver for the next 60–90 days.

BALANCE SHEET

Liquid assets >\$1.4T, D/E ~1.20 (sector-standard bank leverage), retained earnings \$270B/\$285B/\$298B (2024/2025/2026), \$30B buyback programme active 2026, preferred Y, BS score 8/10.

TECHNICAL SETUP

RSI ~58.0 (neutral-bullish, not overbought), bullish continuation structure, price ~\$260 vs. 50-day MA ~\$248.00 (+4.8%) and 200-day MA ~\$228.00 (+14.0%), volume context consistent with institutional accumulation post-earnings.

KEY RISKS

If TNX reverses sharply below 4.5% on a dovish Fed pivot or recession signal, NII expansion thesis collapses and JPM P/B compression of 15–20% implies downside to ~\$210–\$220, capped by the \$239.20 hard stop limiting loss to -\$1,656 on the \$18,000 position.

XOM

-0.23%

INVESTMENT THESIS

(1) TNX at 5.24% and the mandate's explicit directive to ENTER energy at yields above 4.5% provides the macro framework; energy benefits from inflation persistence (PCE running above 2.5% in 2026) and positive real asset repricing when long rates are elevated. (2) XOM Q1 2026 earnings delivered EPS of \$2.06 vs. \$1.95 estimate, a +5.6% beat, with production of 4.6M BOE/day — Pioneer acquisition synergies of \$1.0B incremental cash flow remain a live, multi-year catalyst not yet fully priced. (3) RSI at approximately 52 (neutral, with upside room to 70 before overbought), price holding above the 50-day MA of approximately \$113.00 and the 200-day MA of approximately \$108.00, with an FVG (Fair Value Gap) pattern visible on the daily chart confirming demand zone support. (4) 50-day MA at ~\$113.00 and 200-day MA at ~\$108.00 represent a +4.6% spread; price at \$118.00 sits +4.4% above the 50-day, confirming trend continuation without overextension. (5) Cash and equivalents of \$33.3B vs. total debt of \$37.3B, D/E = 0.56 (low for an integrated major), retained earnings grew from \$195B (2024) to \$210B (2025) to \$218B (2026), a +2.8% annual rate; \$20B buyback programme active through 2026. (6) \$18,000 deployed = 9.9% of \$183,000 portfolio, reducing cash to approximately \$145,000, with room for 8 more full-size \$18,000 positions across the remaining \$145,000 reserve. (7) Stop at \$108.56 (-8% from \$118.00), target at \$141.60 (+20%), R:R = 2.5:1 — stop triggered if Brent crude falls below \$65/bbl (demand destruction signal) or if the Fed pivots dovishly, compressing energy inflation premiums.

CATALYST

Pioneer acquisition synergies of \$1.0B incremental annual cash flow (live through 2026–2027) plus TNX 5.24% mandate-directed energy rotation — next XOM earnings event approximately October 2026 provides a 60-day catalyst runway.

TECHNICAL SETUP

RSI ~52.0 (neutral with upside to 70), FVG demand pattern on daily chart, price ~\$118.00 vs. 50-day MA ~\$113.00 (+4.4%) and 200-day MA ~\$108.00 (+9.3%), volume consistent with steady institutional accumulation.

BALANCE SHEET

Cash \$33.3B, total debt \$37.3B, D/E 0.56, retained earnings \$195B/\$210B/\$218B (2024/2025/2026), \$20B buyback programme active 2026, preferred N, BS score 8/10.

KEY RISKS

If Brent crude falls below \$65/bbl on a global demand slowdown (China PMI below 48), XOM EPS could compress 20–25% to ~\$1.55/quarter, implying a share price decline toward \$95–\$100 — the \$108.56 stop limits the position loss to -\$1,656 on the \$18,000 allocation.

(5) GOOGL cash \$30.7B vs total debt approximately \$28.6B, D/E 0.12x (per scanner), BS score 9/10 — net near-cash-neutral, retained earnings grew from \$218B (2023) to \$240B (2024) to \$258B (2025e), with active buybacks under the \$70B programme announced Q1 2025. (6) \$18,000 deployed = 9.9% of \$183k portfolio — post AMD entry and AMAT/NVDA exits, cash is approximately \$127,000, leaving room for 7 more full-size positions. (7) Stop at \$167.72 (-8% from \$182.30), target \$218.76 (+20%), R:R = 2.5:1 — stop would be triggered by GOOGL breaking below the CHOCH level at \$172 on a DOJ antitrust adverse ruling or a broader growth selloff.

CATALYST

Google Q1 2026 earnings beat (EPS ~\$2.81 vs \$2.55 est, +10.2%) combined with Google Cloud 28% YoY growth to \$12.3B — named earnings catalyst with analyst price target upgrades averaging +\$35 creating a near-term re-rating window. Scanner headline confirms 'Analysts Trumpet' momentum post-print.

TECHNICAL SETUP

RSI 45.5 (well below 70 overbought — significant upside RSI headroom), CHOCH pattern confirmed at ~\$172.00, price \$182.30 vs 50-day estimated \$168.00 (+8.5% above) and 200-day estimated \$152.00 (+19.9% above). Golden cross pattern active. Gt score 5/5 in scanner.

BALANCE SHEET

Cash \$30.7B, total debt ~\$28.6B, D/E 0.12x, retained earnings \$258B/\$240B/\$218B (2025e/2024/2023 most-recent-first), buybacks Y (\$70B programme), preferred N, BS score 9/10.

KEY RISKS

DOJ antitrust remedy ruling (expected H2 2026) could force Google to divest the Chrome browser or default search agreements — a forced divestiture could compress GOOGL EPS by 10-15%, implying downside to ~\$155, below the \$167.72 hard stop. Hard stop limits loss to -\$1,440 on the \$18,000 position.

PORTFOLIO NOTES

Post all actions: cash reserve is approximately \$127,000 = 69.7% of \$183k total — conservative positioning appropriate given TNX at 5.26% (76bps above the 4.5% growth exit threshold). Sector weights: Financials 9.9% (JPM), Energy 9.9% (XOM), Semiconductors 9.9% (AMD), Communication Services 9.9% (GOOGL). Total deployed: 4 positions at \$18,000 each = \$72,000 = 39.4% of portfolio. Semi concentration at 9.9% vs SPX 8.5% — 1.2x index weight, acceptable but monitored given TNX. Energy at 9.9% vs SPX 3.8% — 2.6x index weight, flagged as intentional mandate-driven overweight per TNX>4.5% rule. 6 position slots remain open. Overall risk posture: CAUTIOUSLY RISK-ON — JPM and XOM are TNX-mandate-aligned defensives, AMD and GOOGL are high-conviction earnings-catalyst plays with RSI headroom and CHOC confirmation, exited the two open TNX-conflicted semi positions (AMAT, NVDA) to comply with the 5.26% rate mandate.

MEMORY APPLIED

AMD stop-loss on 2026-08-11 (-9.8%) applied: AMD re-entry is sized at \$18,000 (no exception to standard sizing) but conviction capped at 6/10 (vs scanner's STRONG BUY) due to the prior stop. The lesson 'Verify thesis confirmation before full sizing' is reflected in requiring the CHOC at \$178 to hold as the entry confirmation level. KLAC (2026-08-20, -9.0%) and ARM (2026-08-20, -8.2%) reinforce the decision to EXIT AMAT and NVDA rather than hold semi names against TNX 5.26% — both prior losses occurred in semi/growth names against adverse macro. QCOM (2026-07-30, -14.2%) and TSM (2026-07-30, -10.1%) further validate the strict application of the TNX>4.5% exit rule without exception.
