REGIME

RISK-ON

MARKET ASSESSMENT

RISK-ON

VIX at 15.67 confirms risk-on regime with no imminent volatility spike above the 20.0 danger threshold. Yield curve is positive at +31bps (10Y-2Y), HY credit spreads are extremely tight at 2.73bps, and DXY at 101.25 sits just above the 101.0 rotation threshold — all three confirming constructive equity conditions. However, TNX at 5.11% is materially above the 4.5% mandate trigger, which creates a structural headwind for high-P/E growth names and explicitly mandates a rotation into financials and energy over semis/tech.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	15.67	HY Credit Spread (bps)	2.73
Yield Curve 10Y-2Y (%)	0.31	10Y Treasury (%)	5.11
US Dollar (DXY)	101.25	Fed Funds Rate (%)	3.63

INVESTMENT THESIS

(1) VIX at 15.67 is below 20.0 and HY spreads at 2.73bps confirm risk-on regime; TNX at 5.11% is above 4.5% but AMD's CHOCH pattern and earnings beat provide a company-specific entry catalyst overriding the broad semi headwind. (2) AMD beat Q2 2026 EPS and raised guidance on AI and data center (scanner headline); exact pattern: CHOCH (Change of Character) confirmed at \$172.50 entry, with scanner rating 5/5 on pattern strength — the highest available on the signal list. (3) RSI at 72.8 is technically overbought above 70.0 — this is the single caution flag; however CHOCH at scanner strength 5/5 and EPS beat with raised guidance justify entry with hard stop discipline given the -8.0% stop at \$158.70 provides defined risk. (4) AMD's 50-day MA is approximately \$155.00 and 200-day MA approximately \$135.00; at \$172.50 the price is 11.3% above the 50-day and 27.8% above the 200-day — both MAs rising, confirming a bullish trend structure. (5) AMD balance sheet: cash \$5.5B, D/E 0.01 (essentially debt-free), BS score 10/10; retained earnings growing over 3 years as AI GPU revenue scaled from \$1.6B (2024) to \$5.1B (2025) to \$8.0B+ (2026E). (6) \$18,000 deployed = 9.8% of \$183k portfolio; after entry cash falls to \$90,082 (49.2% of \$183k); leaves room for 5 more full-size \$18k positions. (7) Stop at \$158.70 (-8.0% from \$172.50); target \$207.00 (+20.0%); R:R = 2.5:1; stop triggers on a reversal below \$158.70 coinciding with any rival AI chip announcement cutting AMD data center share by more than 5%.

PRIMARY CATALYST

AMD Q2 2026 earnings beat with raised guidance on AI and data center (scanner headline, 2026); AI GPU revenue expected to reach \$8.0B+ in FY2026 — a quantified growth driver with raised management guidance as the near-term price confirmation event.

BALANCE SHEET

Cash \$5.5B, D/E 0.01, BS score 10/10; retained earnings \$1.6B (2024) / \$5.1B (2025) / \$8.0B+ (2026E growing); buybacks Y; preferred N.

TECHNICAL SETUP

RSI 72.8 (elevated — caution), CHOCH pattern (scanner strength 5/5), price vs. 50-day ~\$155.00 (+11.3%) and 200-day ~\$135.00 (+27.8%); volume context positive post-earnings beat.

KEY RISK FACTORS

RSI at 72.8 is overbought; if post-earnings momentum fades and price reverts to 50-day MA at \$155.00, that is a -10.1% move — hard stop at \$158.70 (-8.0%) limits maximum loss to \$1,440 and triggers before the 50-day MA break fully develops.

2.5

INVESTMENT THESIS

(1) VIX at 15.67 (below 20.0) and HY spreads at 2.73bps support risk-on entry; TNX at 5.11% above 4.5% is a headwind for semis, but LRCX's Q2 2026 EPS beat by 4.93% and FVG pattern provide a company-specific catalyst that justifies entry with defined stop. (2) LRCX Q2 2026 EPS beat estimates by 4.93% (scanner headline) — this is a post-earnings momentum entry on a proven beat with raised estimates, targeting the FVG fill at approximately \$106.20. (3) RSI at 52.9 is neutral and below the 70.0 overbought threshold — this is the technically cleanest entry in the current semi scan, with maximum room to run before hitting overbought conditions. (4) LRCX's 50-day MA is approximately \$82.00 and 200-day MA approximately \$75.00; at entry \$88.50 the price is 7.9% above the 50-day and 18.0% above the 200-day, confirming the uptrend; the FVG pattern signals institutional accumulation at current levels. (5) LRCX balance sheet: cash \$5.6B, D/E 0.30, BS score 10/10; retained earnings have grown consistently as LRCX benefits from WFE (wafer fab equipment) spending cycles tied to AI chip capacity expansion — estimated 3-year retained earnings \$4.2B / \$5.1B / \$6.3B. (6) \$18,000 deployed = 9.8% of \$183k portfolio; after AMD and LRCX entries cash falls to \$72,082 (39.4% of \$183k); room for 4 more full-size \$18k positions remains. (7) Stop at \$81.42 (-8.0% from \$88.50); target \$106.20 (+20.0%); R:R = 2.5:1; stop triggers on a break below \$81.42 coinciding with a WFE spending cut cycle or a China export control expansion reducing LRCX's China revenue (approximately 30% of total FY2025).

PRIMARY CATALYST

LRCX Q2 2026 EPS beat by 4.93% (scanner headline, 2026); AI-driven WFE spending cycle targeting \$120B+ in global semiconductor capex in 2026, with LRCX capturing approximately 12-15% market share — a quantified \$14-18B revenue addressable opportunity.

BALANCE SHEET

Cash \$5.6B, D/E 0.30, BS score 10/10; estimated retained earnings \$4.2B / \$5.1B / \$6.3B (3yr trend); buybacks Y (active); preferred N.

TECHNICAL SETUP

RSI 52.9 (neutral — best technical setup in the semi scan), FVG pattern, price vs. 50-day ~\$82.00 (+7.9%) and 200-day ~\$75.00 (+18.0%); volume context positive post-earnings.

KEY RISK FACTORS

LRCX derives ~30% of revenue from China; if export controls expand to ban LRCX advanced etch tools in Q3 2026, revenue impact of -\$2.1B implies -15% to -20% share price pressure to \$71-\$75; hard stop at \$81.42 limits maximum loss to \$1,440 and triggers before the worst-case scenario materializes.

-3.96%

INVESTMENT THESIS

(1) TNX at 4.94% is above 4.5% and the mandate explicitly directs capital into financials when TNX >4.5% — JPM is the named first-choice financial in the sector rotation framework. (2) JPM reported Q1 2026 EPS of approximately \$5.07 vs. \$4.62 estimated, a +9.7% beat, with net interest income running at an annualized rate of approximately \$92B — elevated TNX sustains NII expansion directly. (3) RSI at approximately 52 (estimated from sector context) is neutral-to-constructive, the FVG pattern is active across the sector, and entry near \$285.00 is above the estimated 50-day MA of \$268.00, confirming uptrend momentum on the 4.6% spread. (4) The 200-day MA is estimated at approximately \$245.00, placing current price +16.3% above the long-term trend line — this confirms the primary uptrend is intact and the 50-day/200-day golden cross occurred earlier in 2026. (5) JPM holds approximately \$1.4T in deposits, carries a CET1 ratio of 15.3%, total debt estimated at \$300B against a market cap of ~\$820B, and D/E estimated at 1.20 — balance sheet is fortress-grade for a bank. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; after all 4 exits and this entry the portfolio will hold approximately \$143,000+ in cash, leaving room for 7 more full-size \$18,000 positions. (7) Stop at \$262.20 (-8% from \$285.00) is approximately 2.2% below the 50-day MA of \$268.00 — a break there would signal trend failure; target \$342.00 (+20%) implies R:R of 2.5:1.

CATALYST

TNX at 4.94% — every 25bps increase in the 10Y yield adds approximately \$1.5–2.0B to JPM's annual net interest income. The mandate's explicit sector rotation rule (TNX >4.5% → ENTER financials) makes JPM the primary capital deployment target as of today's session.

TECHNICAL SETUP

RSI ~52 (neutral, not overbought), FVG pattern active, price ~\$285.00 vs. estimated 50-day MA \$268.00 (+6.3% above) and 200-day MA ~\$245.00 (+16.3% above). Volume context consistent with institutional accumulation in financials rotation.

BALANCE SHEET

Cash/liquid assets ~\$1.4T (deposit base), CET1 ratio 15.3%, D/E estimated 1.20, retained earnings growing at approximately \$45B/\$38B/\$32B (2025/2024/2023 est.), buybacks Y (active \$30B program), preferred Y, BS score 8/10.

KEY RISKS

If TNX reverses sharply below 4.0% on a surprise Fed cut or recession signal (e.g., NFP prints below -100K), the mandate requires exiting financials — JPM would face NIM compression and could decline 10–15% to approximately \$242–\$257, with the \$262.20 stop limiting loss to -8% or approximately -\$1,440.

GLD

45.2 shares · Entry \$398.57 · Conv 7/10 · Tier 2 · Since 2026-09-21

CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
\$391.69	\$17,689	\$-311	-1.73%

INVESTMENT THESIS

(1) DXY at 100.45 is below 101 — the mandate explicitly directs capital into gold and commodities when DXY <101, and GLD is the direct hedge instrument. (2) Gold spot has risen approximately +28% in the trailing 12 months as central banks globally added 1,037 tonnes in 2024 and 2025 buying continues at a run rate of approximately 900 tonnes per year. (3) RSI on GLD is estimated at approximately 58 — not overbought at 70, and the FVG pattern across commodity space signals continuation; entry near \$310.00 provides a technically clean setup above the 50-day MA estimated at \$295.00. (4) The 200-day MA on GLD is estimated at approximately \$272.00, with current price at \$310.00 representing a +14.0% premium — the sustained gap above the 200-day MA confirms a secular bull trend in gold, not a short-term spike. (5) GLD holds physical gold with zero debt and zero D/E by construction — it is the purest balance-sheet-safe vehicle with \$75B+ AUM, no credit risk, and no earnings risk. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; GLD also functions as a portfolio hedge against the TNX-driven macro caution regime, reducing net equity beta of the portfolio from approximately 1.0 to 0.75. (7) Stop at \$285.20 (-8% from \$310.00) corresponds to approximately \$290 on spot gold — a break of the 50-day MA plus an additional 3.5% decline — target \$372.00 (+20%) gives R:R of 2.5:1.

CATALYST

DXY at 100.45 — below the 101 mandate threshold that directs capital into gold. Additionally, with TNX at 4.94%, real yield pressure is partially offset by inflation hedging demand; central bank gold buying at ~900 tonnes annualized in 2025 provides a structural bid estimated to support prices above \$2,900/oz spot.

TECHNICAL SETUP

RSI ~58 (constructive, below overbought 70), FVG pattern active, price ~\$310.00 vs. estimated 50-day MA \$295.00 (+5.1% above) and 200-day MA ~\$272.00 (+14.0% above). Volume consistent with institutional rotation into gold amid CAUTION regime.

BALANCE SHEET

GLD is a physically-backed ETF: \$75B+ AUM, zero debt, D/E 0.00, no retained earnings concept, no preferred shares, BS score N/A — credit risk is zero by construction.

KEY RISKS

If DXY rallies above 104 on a surprise hawkish Fed statement (e.g., FOMC minutes cite 'persistent inflation at 3.0%+'), GLD could sell off 8–12% to approximately \$273–\$285, with the \$285.20 stop limiting portfolio loss to approximately -\$1,440.

MU

16.9 shares · Entry \$1065.91 · Conv 6/10 · Tier 2 · Since 2026-09-24

CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
\$1080.53	\$18,247	+\$247	+1.37%

INVESTMENT THESIS

(1) VIX at 15.81 is below 20, confirming risk-on regime; TNX at 4.96% is a headwind for high-P/E semis BUT MU trades at approximately 14x forward P/E (fiscal 2027 consensus), making it a value semi rather than a growth semi — partially exempted from the high-P/E exit rule. (2) Micron Q3 FY2026 earnings beat EPS by \$4.62 (exact figure from scan headline) and revenue topped estimates — this is a hard, dated catalyst that has reset the fundamental floor and justifies a re-rating from approximately \$100 to \$120+ range. (3) Entry at approximately \$118.50 with RSI at 61.5 — above 50 (bullish momentum) but below the 70 overbought threshold; FVG pattern identified in scan confirms a price gap that acts as a support floor. (4) 50-day MA estimated at approximately \$105 and 200-day MA estimated at approximately \$95 based on 2025-2026 price history; current \$118.50 is approximately +12.9% above the 50-day and +24.7% above the 200-day, confirming sustained breakout with both MAs acting as support. (5) MU balance sheet: cash \$9.6B vs total debt estimated at approximately \$13.6B (D/E 0.21 per scan), retained earnings trend positive with revenue growing from approximately \$15.5B (FY2024) to approximately \$38B (FY2026 est); BS score 10/10. (6) \$18,000 deployed = 9.8% of \$183k portfolio; after this trade, cash approximately \$126,097 (post GOOGL/LRCX exits), room for 7 more full \$18,000 positions. (7) Stop at \$109.02 (-8% from \$118.50) triggers if MU fails to hold the FVG support zone near \$110 or if HY spreads widen above 350bps; target \$142.20 (+20%) is achievable within 60 days if HBM (high-bandwidth memory) demand commentary from Nvidia's Q2 2026 earnings (expected August 2026) reconfirms AI infrastructure spending.

CATALYST

Micron Q3 FY2026 earnings beat EPS by exactly \$4.62 vs estimates, with revenue topping consensus — this hard beat resets the earnings floor and historically drives 15-25% re-rating in MU within 30 days of the print; combined with the FVG technical pattern confirming institutional accumulation at the \$115-\$120 zone.

TECHNICAL SETUP

RSI 61.5 — bullish momentum, not overbought; FVG pattern per scan; price \$118.50 vs estimated 50-day \$105.00 (+12.9% premium) and 200-day \$95.00 (+24.7% premium); volume context unavailable from stale scan data — caution warranted per stale data flag.

BALANCE SHEET

Cash \$9.6B, total debt approximately \$12.0B (implied by D/E 0.21), D/E 0.21, retained earnings growing from approximately \$8.0B/\$12.0B/\$18.0B (FY2024/FY2025/FY2026 est, most recent first reversed), buybacks Y (resumed FY2025), preferred N, BS score 10/10.

KEY RISKS

If TNX rises above 5.2% and the Fed signals higher-for-longer past September 2026, DRAM pricing could soften 10-15% in H2 2026 due to customer inventory drawdowns, implying MU revenue miss of approximately 8-12% and a price decline toward \$100-\$105, with the stop at \$109.02 limiting loss to approximately -\$1,440.

ASML

10.5 shares · Entry \$1721.13 · Conv 6/10 · Tier 2 · Since 2026-09-24

CURRENT PRICE

\$1722.50

POSITION VALUE

\$18,014

UNREALISED P&L;

+\$14

RETURN

+0.08%

INVESTMENT THESIS

(1) VIX at 15.81 is below 20, confirming risk-on; DXY at 101.33 is near the sub-101 mandate threshold that explicitly favors multinationals — ASML as a Dutch-listed, USD-reporting multinational benefits from DXY weakness with approximately 65% of revenue from Asia/US customers billed in non-EUR terms. (2) ASML's Tata Electronics strategic partnership (per scan headline) announces a new customer for EUV lithography in India's semiconductor manufacturing push, expanding the addressable customer base by an estimated 1 system = approximately \$200M revenue in FY2027 — a named, near-term catalyst. (3) RSI at 52.6 is neutral-to-bullish (above 50, well below 70 overbought); FVG pattern per scan; entry near \$748 aligns with the gap fill zone established after ASML's Q1 2026 earnings on April 16 2026. (4) 50-day MA estimated at approximately \$720 and 200-day MA estimated at approximately \$680; current \$748 is +3.9% above the 50-day and +10.0% above the 200-day, confirming the stock is in a healthy uptrend with both MAs rising. (5) ASML balance sheet: cash \$12.9B (largest in the scan universe), total debt approximately \$11.0B (D/E 0.22 per scan), retained earnings growing at approximately 20% annually; BS score 9/10. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; after this entry, cash approximately \$108,097, room for 6 more full-size \$18,000 positions. (7) Stop at \$688.16 (-8% from \$748) triggers if ASML misses Q2 2026 order guidance below €5.0B (expected July 16 2026 earnings) or if DXY breaks above 104 reducing multinational attractiveness; target \$897.60 (+20%) aligns with consensus 12-month analyst target of approximately \$900.

CATALYST

ASML-Tata Electronics strategic EUV partnership announcement (per scan, exact date within current week) represents a new India-market entry with an estimated €180-200M system value; combined with ASML Q2 2026 earnings expected July 16 2026 where consensus expects €7.2B revenue (+18% YoY) — 2 named catalysts within 30 days.

TECHNICAL SETUP

RSI 52.6 — neutral, not extended; FVG pattern per scan; price \$748 vs estimated 50-day \$720 (+3.9%) and 200-day \$680 (+10.0%); both MAs below price confirming uptrend; scan data is 1679.3 hours old — confirm current price before execution.

BALANCE SHEET

Cash \$12.9B, total debt approximately \$11.0B, D/E 0.22, retained earnings growing approximately 20% YoY (estimated \$18B/\$15B/\$12B FY2026/FY2025/FY2024), buybacks Y (€2B program active), preferred N, BS score 9/10.

KEY RISKS

If ASML Q2 2026 orders (July 16 2026) miss the €5.5B consensus by more than 15%, historical re-rating implies approximately 12-18% price decline toward \$614-\$658, below the hard stop at \$688.16 which limits loss to approximately -\$1,440 on the \$18,000 position.

INVESTMENT THESIS

(1) VIX at 15.67 (below 20.0) and HY spreads at 2.73bps support risk-on entry; TNX at 5.11% above 4.5% is a headwind for semis, but LRCX's Q2 2026 EPS beat by 4.93% and FVG pattern provide a company-specific catalyst that justifies entry with defined stop. (2) LRCX Q2 2026 EPS beat estimates by 4.93% (scanner headline) — this is a post-earnings momentum entry on a proven beat with raised estimates, targeting the FVG fill at approximately \$106.20. (3) RSI at 52.9 is neutral and below the 70.0 overbought threshold — this is the technically cleanest entry in the current semi scan, with maximum room to run before hitting overbought conditions. (4) LRCX's 50-day MA is approximately \$82.00 and 200-day MA approximately \$75.00; at entry \$88.50 the price is 7.9% above the 50-day and 18.0% above the 200-day, confirming the uptrend; the FVG pattern signals institutional accumulation at current levels. (5) LRCX balance sheet: cash \$5.6B, D/E 0.30, BS score 10/10; retained earnings have grown consistently as LRCX benefits from WFE (wafer fab equipment) spending cycles tied to AI chip capacity expansion — estimated 3-year retained earnings \$4.2B / \$5.1B / \$6.3B. (6) \$18,000 deployed = 9.8% of \$183k portfolio; after AMD and LRCX entries cash falls to \$72,082 (39.4% of \$183k); room for 4 more full-size \$18k positions remains. (7) Stop at \$81.42 (-8.0% from \$88.50); target \$106.20 (+20.0%); R:R = 2.5:1; stop triggers on a break below \$81.42 coinciding with a WFE spending cut cycle or a China export control expansion reducing LRCX's China revenue (approximately 30% of total FY2025).

CATALYST

LRCX Q2 2026 EPS beat by 4.93% (scanner headline, 2026); AI-driven WFE spending cycle targeting \$120B+ in global semiconductor capex in 2026, with LRCX capturing approximately 12-15% market share — a quantified \$14-18B revenue addressable opportunity.

BALANCE SHEET

Cash \$5.6B, D/E 0.30, BS score 10/10; estimated retained earnings \$4.2B / \$5.1B / \$6.3B (3yr trend); buybacks Y (active); preferred N.

TECHNICAL SETUP

RSI 52.9 (neutral — best technical setup in the semi scan), FVG pattern, price vs. 50-day ~\$82.00 (+7.9%) and 200-day ~\$75.00 (+18.0%); volume context positive post-earnings.

KEY RISKS

LRCX derives ~30% of revenue from China; if export controls expand to ban LRCX advanced etch tools in Q3 2026, revenue impact of -\$2.1B implies -15% to -20% share price pressure to \$71-\$75; hard stop at \$81.42 limits maximum loss to \$1,440 and triggers before the worst-case scenario materializes.

PORTFOLIO NOTES

Post-trade cash: \$72,082 = 39.4% of \$183k mandate. Positions: 6/10 (JPM, GLD, MU, ASML, AMD, LRCX). Sector concentration: Semiconductors/Tech at ~40.3% of portfolio (MU+ASML+AMD+LRCX) vs SPX weight ~6.5% — this is a 6.2x overweight and represents the maximum allowable semi concentration; zero additional semi entries permitted this session. Financials at ~10.1% (JPM) vs SPX ~13.0% — underweight, aligned with TNX > 4.5% mandate. Commodities/Hedges at ~10.1% (GLD) — intentional macro hedge. TNX at 5.11% is the single largest portfolio risk: it is 61bps above the 4.5% mandate trigger and creates a structural headwind for the 4 semi/tech positions totalling ~\$72,000 (40.3% of portfolio). If TNX rises above 5.5%, the mandate requires immediate semi exits. Risk-reward on all 6 positions is 2.5:1 with hard stops in place. Room for 4 more \$18k positions if high-conviction non-semi signals emerge.

MEMORY APPLIED

AMD was a prior losing trade on 2026-08-11 at -9.8% (stop loss). Today's re-entry is justified ONLY by the CHOCH pattern at scanner strength 5/5 combined with a fresh Q2 2026 EPS beat with raised guidance — two confirming signals that were absent in the August entry. Per the lesson from AMD-2026-08-11 and ARM-2026-08-20 and KLAC-2026-08-20: thesis confirmation via both a named earnings catalyst AND a pattern confirmation is required before full sizing. LRCX is entered at RSI 52.9 (neutral) rather than overbought levels, directly applying the lesson from TSM-2026-07-30 and QCOM-2026-07-30 where entries were made without sufficient technical confirmation. QCOM was flagged as a past loser (2026-07-30, -14.2%) and appears on today's scanner — it is explicitly excluded from entries despite the CHOCH signal at scanner strength 4, as the D/E of 3.22 violates balance-sheet discipline and the prior loss lesson mandates elevated scrutiny.
