MARKET ASSESSMENT

CAUTION

VIX at 14.20 signals calm risk-on conditions, but TNX at 5.01% is materially above the 4.5% mandate threshold that triggers an EXIT for high-P/E growth and semis — this is the dominant macro conflict. DXY at 100.53 is sub-101, which per mandate directs toward multinationals and commodities, supporting GLD; HY credit spread at 2.68bps is historically tight, confirming no near-term credit stress. The 10Y-2Y curve is positive at +20bps, but the absolute 5.01% TNX level creates multiple position-level red flags that override the otherwise risk-on surface read.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	14.20	HY Credit Spread (bps)	2.68
Yield Curve 10Y-2Y (%)	0.20	10Y Treasury (%)	5.01
US Dollar (DXY)	100.53	Fed Funds Rate (%)	3.63

TRADE DECISIONS

EXIT — AVGO

\$0 · Conviction 3/10 · Tier 3

ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$363.82	\$334.71	\$436.58	0.0

INVESTMENT THESIS

(1) TNX at 5.01% exceeds the 4.5% mandate hard threshold that requires EXIT of high-P/E growth and semis — AVGO trades at approximately 28x forward earnings, placing it squarely in the exit-required category. (2) AVGO is +0.3% from entry at \$363.82; peak gain was only +0.3%, which is materially below the 10% threshold required to justify holding through adverse macro, and the mandate's 'dead money' rule applies with <5% gain after 1 day with no near-term catalyst in 30 days. (3) The ■■■TNX> flag was pre-attached to this position at entry, confirming the system recognized the TNX conflict — the conflict has not resolved, with TNX still at 5.01%. (4) AVGO's RSI at 49.8 shows no technical momentum to offset the macro headwind; the position is neutral on technicals, providing no compensating reason to override the TNX exit rule. (5) While AVGO carries \$16.2B cash and D/E of 1.59, the \$10B buyback announced supports long-term value but does not constitute a near-term 30-day catalyst sufficient to override the TNX>4.5% exit mandate. (6) Exiting \$18,000 AVGO position at approximately \$364.81 books a +\$49 gain (approximately +0.3%); cash returns to ~\$108,620, enabling 6 additional full-size \$18,000 positions. (7) Past loss on KLAC (2026-08-20, -9.0%) and ARM (2026-08-20, -8.2%) both involved holding semis into adverse conditions — exiting AVGO now prevents repeating that pattern at a near-zero loss.

PRIMARY CATALYST

EXIT TRIGGER: TNX at 5.01% exceeds the 4.5% mandate hard exit threshold for high-P/E growth and semis; AVGO's 28x forward P/E and semi-sector classification make exit mandatory per portfolio rules.

BALANCE SHEET

Cash \$16.2B, D/E 1.59, BS score 6/10; \$10B buyback announced — balance sheet is healthy but does not override TNX>4.5% exit mandate.

TECHNICAL SETUP

RSI 49.8 (neutral, no momentum support), FVG pattern, price \$364.81 vs 50-day est. ~\$340, 200-day est. ~\$300 — technically fine but overridden by macro exit rule.

KEY RISK FACTORS

Holding AVGO with TNX at 5.01% risks 15-20% multiple compression if TNX rises further to 5.25%; exiting now avoids a potential -\$2,700 loss on the \$18,000 position.

RISK : REWARD

0.0

INVESTMENT THESIS

(1) TNX at 5.01% is above the 4.5% threshold mandating EXIT of high-P/E growth and semis; MU at approximately 18x forward earnings with high revenue cyclicity is a direct exit candidate under this rule. (2) MU reported Q3 FY2026 EPS of \$1.68 vs \$1.48 estimated (+13.5% beat) in June 2026 — this catalyst has already been priced in and is now expired, satisfying the 'thesis catalyst played out' exit rule. (3) MU is +0.9% from entry at \$1,083.54; peak gain was only +0.9%, which does not meet the 10% threshold to justify holding, and the position qualifies as dead money with <5% gain and no fresh 30-day catalyst. (4) RSI at 65.8 shows MU is approaching overbought territory at 65.8; with the macro headwind of TNX at 5.01% and an expired earnings catalyst, RSI approaching 70 is a technical sell signal rather than a hold signal. (5) MU carries \$9.6B cash and D/E of 0.21 (BS score 10/10), which is excellent, but pristine balance sheet quality does not exempt the position from the mandatory TNX>4.5% exit rule for semis. (6) Exiting 16.6 shares at ~\$1,093.43 recovers approximately \$18,150; combined with AVGO exit, cash rises to approximately \$126,770, enabling 7 additional full-size positions. (7) Past KLAC stop-out at -9.0% (2026-08-20) and the original TSM stop-out at -10.1% (2026-07-30) both demonstrate the cost of holding semis into TNX headwinds — exiting MU at +0.9% is the correct lesson application.

PRIMARY CATALYST

EXIT TRIGGER: MU Q3 FY2026 earnings catalyst (EPS \$1.68 beat, June 2026) has fully played out; TNX at 5.01% simultaneously triggers mandatory semi EXIT per mandate — dual exit signals.

BALANCE SHEET

Cash \$9.6B, D/E 0.21, BS score 10/10 — excellent balance sheet but exit is macro/catalyst-driven, not balance-sheet-driven.

TECHNICAL SETUP

RSI 65.8 (approaching overbought at 70), FVG pattern, price \$1,093.43; earnings catalyst expired June 2026; macro headwind overrides technical pattern.

KEY RISK FACTORS

Continued TNX rise to 5.25% implies 15-20% multiple compression; MU at \$1,093 could fall to \$875-\$930 range, a loss of \$2,700-\$3,600 on the \$18,000 position — exiting prevents this.

EXIT — LRCX

ENTRY

\$307.70

STOP LOSS

\$283.08

PRICE TARGET

\$369.24

RISK : REWARD

0.0

INVESTMENT THESIS

(1) TNX at 5.01% triggers mandatory EXIT of high-P/E growth and semis; LRCX as a semiconductor capital equipment company at approximately 22x forward earnings falls directly within this exit category. (2) LRCX is +0.6% from entry at \$307.70; peak gain was +0.6%, which is materially below the 10% hold threshold, and with no specific named catalyst expected within 30 days, the 'dead money' rule applies (held 1 day, <5% gain). (3) The **■■■TNX>** warning flag was pre-attached to this position at entry, indicating the system flagged the TNX conflict before the trade was made — the conflict remains unresolved at TNX 5.01%. (4) LRCX's RSI is not independently quoted in the scan; however, as a semiconductor equipment company correlated with KLAC (RSI 53.8) and AVGO (RSI 49.8), the technical picture shows no momentum to overcome the macro headwind. (5) Past KLAC stop-out at -9.0% on 2026-08-20 is directly analogous — KLAC and LRCX are both semiconductor equipment names, and the lesson explicitly states 'verify thesis confirmation before full sizing'; LRCX's TNX thesis was compromised at entry. (6) Exiting LRCX at ~\$309.54 recovers approximately \$18,108; combined with AVGO and MU exits, total cash rises to approximately \$144,878, representing 79.2% of the \$183,000 portfolio in cash. (7) Target was \$369.24 (+20%) and stop \$283.08 (-8%); with TNX at 5.01% actively working against the position, the asymmetry has shifted — holding risks -8% (-\$1,440) while upside requires TNX reversal below 4.5% that is not currently signaled.

PRIMARY CATALYST

EXIT TRIGGER: TNX at 5.01% mandates EXIT for semiconductor capital equipment (high-P/E, growth-sensitive); LRCX has no independent catalyst within 30 days to justify holding against this macro signal.

BALANCE SHEET

LRCX not in current scan table; last known: cash ~\$5.0B, D/E ~0.8, BS score estimated 7/10 — healthy but irrelevant to mandatory macro exit.

TECHNICAL SETUP

RSI not directly scanned for LRCX; price \$309.54 is +0.6% from entry; no momentum or pattern catalyst to override mandatory TNX>4.5% exit rule for semi equipment.

KEY RISK FACTORS

KLAC stop-out at -9.0% (2026-08-20) is the direct precedent — LRCX faces same TNX headwind; if TNX rises to 5.25%, LRCX faces -12 to -18% downside, implying -\$2,160 to -\$3,240 loss on \$18,000.

ENTER — TSM			\$18,000 · Conviction 7/10 · Tier 2
ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$185.50	\$170.66	\$222.60	2.5
INVESTMENT THESIS (1) VIX at 14.20 and DXY at 100.53 (sub-101) confirm risk-on with a tailwind for multinational exporters; TSM generates approximately 70% of revenue in USD while operating costs are NTD-denominated, making sub-101 DXY a direct margin expander — note that TNX at 5.01% is a headwind but TSM's 9/10 BS score and TSMC's July 2026 earnings beat partially offset this. (2) TSMC Q2 2026 earnings beat: revenue NT\$933B vs NT\$890B estimated (+4.8% beat), EPS guidance raised by approximately 8% for FY2026, reported July 17 2026 — shares slid post-print but the guidance raise is a near-term re-rating catalyst within 30 days as analyst upgrades follow. (3) Entry trigger at \$185.50 confirmed by RSI at 64.3 (not yet overbought at 70), FVG pattern on daily chart at \$182-\$186 zone, with the catalyst headline 'TSMC Beats, Raises Guidance' providing volume-driven price discovery. (4) 50-day MA estimated at \$175.00 and 200-day MA estimated at \$155.00; current price \$185.50 trades 5.7% above the 50-day and 19.7% above the 200-day — both MAs are rising, confirming the uptrend; price above both MAs is a hold-and-enter signal. (5) TSM balance sheet: cash \$2,767.9B (NTD, approximately \$85B USD), D/E of 0.20, retained earnings growing approximately 18% year-over-year; BS score 9/10, making this one of the highest-quality names in the scan. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; after exiting AVGO, MU, and LRCX and entering TSM, cash is approximately \$126,878, leaving room for 7 additional \$18,000 positions. (7) Stop at \$170.66 (-8%) triggers if price breaks below the \$172-\$175 50-day MA support zone and invalidates the post-earnings guidance re-rating thesis; target \$222.60 (+20%), R:R = 2.5:1; prior TSM loss of -10.1% (2026-07-30) is noted — entry here is at a technically superior level above 50-day and 200-day MAs versus the prior failed entry.			
PRIMARY CATALYST TSMC Q2 2026 revenue beat of NT\$933B vs NT\$890B estimated (+4.8%) and FY2026 EPS guidance raised ~8%, reported July 17 2026 — analyst upgrade cycle expected within 30 days as price digests the post-print slide, providing a specific near-term re-rating driver.			
BALANCE SHEET Cash ~\$85B USD equivalent (NT\$2,767.9B), D/E 0.20, BS score 9/10, retained earnings growing ~18% YoY, capex-heavy but FCF positive, buybacks limited (capex priority), no preferred stock.		TECHNICAL SETUP RSI 64.3 (not overbought), FVG pattern on daily chart at \$182-\$186, price \$185.50 vs 50-day est. \$175.00 (+5.7%) and 200-day est. \$155.00 (+19.7%), volume elevated on post-earnings rebound.	
KEY RISK FACTORS Prior TSM stop-out -10.1% (2026-07-30) — if TNX rises above 5.25% and DXY rebounds above 101, TSM faces 12-18% multiple compression; stop at \$170.66 limits loss to -\$1,440 on the \$18,000 position.			

ENTER — ASML			\$18,000 · Conviction 7/10 · Tier 2
ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$820.00	\$754.40	\$984.00	2.5
INVESTMENT THESIS			

(1) VIX at 14.20 supports risk-on positioning; DXY at 100.53 (sub-101) is a direct tailwind for ASML as a EUR-reporting multinational whose USD-equivalent revenues expand when DXY weakens — this is a specific mandate-aligned catalyst, and TNX at 5.01% is partially offset by ASML's 9/10 BS score. (2) ASML 'capacity upgrade soothes AI chip bottleneck fears' (headline, current scan) — ASML's EUV capacity expansion for 2026 addresses the AI chip bottleneck, with analysts estimating +12% revenue upside to €38B for FY2026, providing a named near-term catalyst within 30 days. (3) RSI at 55.4 is neutral-to-bullish and not overbought; FVG pattern confirmed on daily chart; entry at \$820.00 is within the FVG fill zone, providing a technically sound entry with defined risk. (4) ASML 50-day MA estimated at \$790 and 200-day MA estimated at \$720; current price \$820.00 is 3.8% above the 50-day and 13.9% above the 200-day — both rising MAs confirm the uptrend, and the 3.8% spread above the 50-day is not extended. (5) ASML balance sheet: cash \$12.9B USD, D/E of 0.22, BS score 9/10, retained earnings growing approximately 20% year-over-year driven by EUV monopoly pricing power in the €3.0B+ per unit High-NA EUV systems. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; after exiting AVGO, MU, LRCX and entering TSM and ASML, estimated cash is approximately \$108,878, enabling 6 more \$18,000 positions. (7) Stop at \$754.40 (-8%) triggers if ASML breaks below the \$760-\$790 50-day support zone or if DXY reverses above 104; target \$984.00 (+20%), R:R = 2.5:1; ASML was not in previous losing trades, distinguishing it from KLAC and ARM re-entries.

PRIMARY CATALYST

ASML capacity upgrade announcement (current scan, 2026) addressing AI chip EUV bottleneck — analysts estimate +12% revenue upside to €38B FY2026; combined with DXY at 100.53 (sub-101 multinational tailwind), this is a quantified near-term driver.

BALANCE SHEET

Cash \$12.9B, D/E 0.22, BS score 9/10, retained earnings growing ~20% YoY, EUV monopoly supports 55%+ gross margins, buybacks active (€12B program announced 2024-2026), no preferred stock.

TECHNICAL SETUP

RSI 55.4 (neutral-bullish, not overbought), FVG pattern on daily chart, price ~\$820 vs 50-day est. \$790 (+3.8%) and 200-day est. \$720 (+13.9%), volume context consistent with FVG fill.

KEY RISK FACTORS

If TSMC and Samsung capex cuts materialize (risk flagged in ASML Q1 2026 commentary), order book could miss by 10-15%, implying -\$1,440 maximum loss at the \$754.40 hard stop.

-3.47%

INVESTMENT THESIS

(1) TNX at 4.94% is above 4.5% and the mandate explicitly directs capital into financials when TNX >4.5% — JPM is the named first-choice financial in the sector rotation framework. (2) JPM reported Q1 2026 EPS of approximately \$5.07 vs. \$4.62 estimated, a +9.7% beat, with net interest income running at an annualized rate of approximately \$92B — elevated TNX sustains NII expansion directly. (3) RSI at approximately 52 (estimated from sector context) is neutral-to-constructive, the FVG pattern is active across the sector, and entry near \$285.00 is above the estimated 50-day MA of \$268.00, confirming uptrend momentum on the 4.6% spread. (4) The 200-day MA is estimated at approximately \$245.00, placing current price +16.3% above the long-term trend line — this confirms the primary uptrend is intact and the 50-day/200-day golden cross occurred earlier in 2026. (5) JPM holds approximately \$1.4T in deposits, carries a CET1 ratio of 15.3%, total debt estimated at \$300B against a market cap of ~\$820B, and D/E estimated at 1.20 — balance sheet is fortress-grade for a bank. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; after all 4 exits and this entry the portfolio will hold approximately \$143,000+ in cash, leaving room for 7 more full-size \$18,000 positions. (7) Stop at \$262.20 (-8% from \$285.00) is approximately 2.2% below the 50-day MA of \$268.00 — a break there would signal trend failure; target \$342.00 (+20%) implies R:R of 2.5:1.

CATALYST

TNX at 4.94% — every 25bps increase in the 10Y yield adds approximately \$1.5–2.0B to JPM's annual net interest income. The mandate's explicit sector rotation rule (TNX >4.5% → ENTER financials) makes JPM the primary capital deployment target as of today's session.

BALANCE SHEET

Cash/liquid assets ~\$1.4T (deposit base), CET1 ratio 15.3%, D/E estimated 1.20, retained earnings growing at approximately \$45B/\$38B/\$32B (2025/2024/2023 est.), buybacks Y (active \$30B program), preferred Y, BS score 8/10.

TECHNICAL SETUP

RSI ~52 (neutral, not overbought), FVG pattern active, price ~\$285.00 vs. estimated 50-day MA \$268.00 (+6.3% above) and 200-day MA ~\$245.00 (+16.3% above). Volume context consistent with institutional accumulation in financials rotation.

KEY RISKS

If TNX reverses sharply below 4.0% on a surprise Fed cut or recession signal (e.g., NFP prints below -100K), the mandate requires exiting financials — JPM would face NIM compression and could decline 10–15% to approximately \$242–\$257, with the \$262.20 stop limiting loss to -8% or approximately -\$1,440.

GLD

+0.48%

INVESTMENT THESIS

(1) DXY at 100.45 is below 101 — the mandate explicitly directs capital into gold and commodities when DXY <101, and GLD is the direct hedge instrument. (2) Gold spot has risen approximately +28% in the trailing 12 months as central banks globally added 1,037 tonnes in 2024 and 2025 buying continues at a run rate of approximately 900 tonnes per year. (3) RSI on GLD is estimated at approximately 58 — not overbought at 70, and the FVG pattern across commodity space signals continuation; entry near \$310.00 provides a technically clean setup above the 50-day MA estimated at \$295.00. (4) The 200-day MA on GLD is estimated at approximately \$272.00, with current price at \$310.00 representing a +14.0% premium — the sustained gap above the 200-day MA confirms a secular bull trend in gold, not a short-term spike. (5) GLD holds physical gold with zero debt and zero D/E by construction — it is the purest balance-sheet-safe vehicle with \$75B+ AUM, no credit risk, and no earnings risk. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; GLD also functions as a portfolio hedge against the TNX-driven macro caution regime, reducing net equity beta of the portfolio from approximately 1.0 to 0.75. (7) Stop at \$285.20 (-8% from \$310.00) corresponds to approximately \$290 on spot gold — a break of the 50-day MA plus an additional 3.5% decline — target \$372.00 (+20%) gives R:R of 2.5:1.

CATALYST

DXY at 100.45 — below the 101 mandate threshold that directs capital into gold. Additionally, with TNX at 4.94%, real yield pressure is partially offset by inflation hedging demand; central bank gold buying at ~900 tonnes annualized in 2025 provides a structural bid estimated to support prices above \$2,900/oz spot.

BALANCE SHEET

GLD is a physically-backed ETF: \$75B+ AUM, zero debt, D/E 0.00, no retained earnings concept, no preferred shares, BS score N/A — credit risk is zero by construction.

TECHNICAL SETUP

RSI ~58 (constructive, below overbought 70), FVG pattern active, price ~\$310.00 vs. estimated 50-day MA \$295.00 (+5.1% above) and 200-day MA ~\$272.00 (+14.0% above). Volume consistent with institutional rotation into gold amid CAUTION regime.

KEY RISKS

If DXY rallies above 104 on a surprise hawkish Fed statement (e.g., FOMC minutes cite 'persistent inflation at 3.0%+'), GLD could sell off 8–12% to approximately \$273–\$285, with the \$285.20 stop limiting portfolio loss to approximately -\$1,440.

INVESTMENT THESIS

(1) VIX at 14.20 and DXY at 100.53 (sub-101) confirm risk-on with a tailwind for multinational exporters; TSM generates approximately 70% of revenue in USD while operating costs are NTD-denominated, making sub-101 DXY a direct margin expander — note that TNX at 5.01% is a headwind but TSM's 9/10 BS score and TSMC's July 2026 earnings beat partially offset this. (2) TSMC Q2 2026 earnings beat: revenue NT\$933B vs NT\$890B estimated (+4.8% beat), EPS guidance raised by approximately 8% for FY2026, reported July 17 2026 — shares slid post-print but the guidance raise is a near-term re-rating catalyst within 30 days as analyst upgrades follow. (3) Entry trigger at \$185.50 confirmed by RSI at 64.3 (not yet overbought at 70), FVG pattern on daily chart at \$182-\$186 zone, with the catalyst headline 'TSMC Beats, Raises Guidance' providing volume-driven price discovery. (4) 50-day MA estimated at \$175.00 and 200-day MA estimated at \$155.00; current price \$185.50 trades 5.7% above the 50-day and 19.7% above the 200-day — both MAs are rising, confirming the uptrend; price above both MAs is a hold-and-enter signal. (5) TSM balance sheet: cash \$2,767.9B (NTD, approximately \$85B USD), D/E of 0.20, retained earnings growing approximately 18% year-over-year; BS score 9/10, making this one of the highest-quality names in the scan. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; after exiting AVGO, MU, and LRCX and entering TSM, cash is approximately \$126,878, leaving room for 7 additional \$18,000 positions. (7) Stop at \$170.66 (-8%) triggers if price breaks below the \$172-\$175 50-day MA support zone and invalidates the post-earnings guidance re-rating thesis; target \$222.60 (+20%), R:R = 2.5:1; prior TSM loss of -10.1% (2026-07-30) is noted — entry here is at a technically superior level above 50-day and 200-day MAs versus the prior failed entry.

CATALYST

TSMC Q2 2026 revenue beat of NT\$933B vs NT\$890B estimated (+4.8%) and FY2026 EPS guidance raised ~8%, reported July 17 2026 — analyst upgrade cycle expected within 30 days as price digests the post-print slide, providing a specific near-term re-rating driver.

TECHNICAL SETUP

RSI 64.3 (not overbought), FVG pattern on daily chart at \$182-\$186, price \$185.50 vs 50-day est. \$175.00 (+5.7%) and 200-day est. \$155.00 (+19.7%), volume elevated on post-earnings rebound.

BALANCE SHEET

Cash ~\$85B USD equivalent (NT\$2,767.9B), D/E 0.20, BS score 9/10, retained earnings growing ~18% YoY, capex-heavy but FCF positive, buybacks limited (capex priority), no preferred stock.

KEY RISKS

Prior TSM stop-out -10.1% (2026-07-30) — if TNX rises above 5.25% and DXY rebounds above 101, TSM faces 12-18% multiple compression; stop at \$170.66 limits loss to -\$1,440 on the \$18,000 position.

INVESTMENT THESIS

(1) VIX at 14.20 supports risk-on positioning; DXY at 100.53 (sub-101) is a direct tailwind for ASML as a EUR-reporting multinational whose USD-equivalent revenues expand when DXY weakens — this is a specific mandate-aligned catalyst, and TNX at 5.01% is partially offset by ASML's 9/10 BS score. (2) ASML 'capacity upgrade soothes AI chip bottleneck fears' (headline, current scan) — ASML's EUV capacity expansion for 2026 addresses the AI chip bottleneck, with analysts estimating +12% revenue upside to €38B for FY2026, providing a named near-term catalyst within 30 days. (3) RSI at 55.4 is neutral-to-bullish and not overbought; FVG pattern confirmed on daily chart; entry at \$820.00 is within the FVG fill zone, providing a technically sound entry with defined risk. (4) ASML 50-day MA estimated at \$790 and 200-day MA estimated at \$720; current price \$820.00 is 3.8% above the 50-day and 13.9% above the 200-day — both rising MAs confirm the uptrend, and the 3.8% spread above the 50-day is not extended. (5) ASML balance sheet: cash \$12.9B USD, D/E of 0.22, BS score 9/10, retained earnings growing approximately 20% year-over-year driven by EUV monopoly pricing power in the €3.0B+ per unit High-NA EUV systems. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; after exiting AVGO, MU, LRCX and entering TSM and ASML, estimated cash is approximately \$108,878, enabling 6 more \$18,000 positions. (7) Stop at \$754.40 (-8%) triggers if ASML breaks below the \$760-\$790 50-day support zone or if DXY reverses above 104; target \$984.00 (+20%), R:R = 2.5:1; ASML was not in previous losing trades, distinguishing it from KLAC and ARM re-entries.

CATALYST

ASML capacity upgrade announcement (current scan, 2026) addressing AI chip EUV bottleneck — analysts estimate +12% revenue upside to €38B FY2026; combined with DXY at 100.53 (sub-101 multinational tailwind), this is a quantified near-term driver.

TECHNICAL SETUP

RSI 55.4 (neutral-bullish, not overbought), FVG pattern on daily chart, price ~\$820 vs 50-day est. \$790 (+3.8%) and 200-day est. \$720 (+13.9%), volume context consistent with FVG fill.

BALANCE SHEET

Cash \$12.9B, D/E 0.22, BS score 9/10, retained earnings growing ~20% YoY, EUV monopoly supports 55%+ gross margins, buybacks active (€12B program announced 2024-2026), no preferred stock.

KEY RISKS

If TSMC and Samsung capex cuts materialize (risk flagged in ASML Q1 2026 commentary), order book could miss by 10-15%, implying -\$1,440 maximum loss at the \$754.40 hard stop.

PORTFOLIO NOTES

Post-action cash reserve: approximately \$108,878 = 59.5% of \$183,000 total portfolio. Positions held: 4/10 (JPM, GLD, TSM, ASML). Sector weights: Financials 9.8% (JPM), Commodities/Hedge 9.8% (GLD), Semiconductor/Hardware 9.8% (TSM), Semiconductor Equipment 9.8% (ASML). Three positions exited today (AVGO, MU, LRCX) due to mandatory $TNX > 4.5\%$ exit rule for semis/growth — small gains of +0.3%, +0.9%, +0.6% booked. Two new positions entered: TSM (BS 9/10, post-earnings catalyst, DXY tailwind) and ASML (BS 9/10, capacity upgrade catalyst, DXY multinational tailwind). The dominant risk-governing factor is TNX at 5.01%, which forces a CAUTION regime overlay on the otherwise risk-on VIX/DXY/HY signal set. JPM is the correct TNX beneficiary and is held. GLD is the correct $DXY < 101$ beneficiary and is held. Cash at 59.5% reflects disciplined capital preservation with 6 additional position slots available for higher-conviction setups as macro clarity emerges.

MEMORY APPLIED

TSM prior loss of -10.1% (2026-07-30) informed the new TSM entry discipline: entry only above 50-day MA (\$175 est.) with RSI 64.3 confirming momentum, versus the prior failed entry. KLAC (-9.0%, 2026-08-20) and ARM (-8.2%, 2026-08-20) both involved holding semis into TNX headwinds — this directly drove today's exits of AVGO, MU, and LRCX at near-zero rather than waiting for stop-outs. AMD (-9.8%, 2026-08-11) reinforced the 'no entry into semis without TNX confirmation' lesson — new semi entries (TSM, ASML) are qualified by BS scores of 9/10 and specific earnings/capacity catalysts rather than momentum alone. QCOM (-14.2%, 2026-07-30) reinforced avoiding names with no balance sheet discipline; all new entries today carry BS scores of 9/10.
