MARKET ASSESSMENT

CAUTION

VIX at 15.81 signals risk-on conditions, yield curve is positive at +26bps (10Y-2Y), and HY credit spreads are extraordinarily tight at 2.73bps — all three confirm benign credit conditions. However, TNX at 4.96% is materially above the 4.5% mandate threshold that requires exiting high-P/E growth and semis, creating a direct conflict for tech/semi longs. DXY at 101.33 is in neutral territory (above 101 floor, below 104 ceiling), providing no directional bias for domestic vs. multinational tilt.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	15.81	HY Credit Spread (bps)	2.73
Yield Curve 10Y-2Y (%)	0.26	10Y Treasury (%)	4.96
US Dollar (DXY)	101.33	Fed Funds Rate (%)	3.63

RISK : REWARD

2.5

INVESTMENT THESIS

(1) TNX at 4.96% is 46bps above the 4.5% mandate threshold that explicitly requires EXIT high-P/E growth tech — GOOGL trades at approximately 22x forward P/E and qualifies as a growth tech name subject to this rule. (2) GOOGL was entered 1d ago with peak gain of only +1.1% and current gain of +1.1%; the position has not made progress beyond +1.1% in 1 day, and no upcoming named catalyst with a specific date exists within 30 days to justify holding. (3) The ■■■TNX> warning flag on this position was present at entry and remains active at TNX 4.96%; the mandate rule states 'TNX above 4.5% and RISING → EXIT high-P/E growth and semis' — this rule is unambiguous. (4) GOOGL next earnings are expected Q3 2026 (approximately October 2026), which is beyond the 30-day window, so no near-term catalyst qualifies to justify holding past +10%. (5) Exiting now at +1.1% (\$337.83 entry, current \$341.39) locks in approximately +\$190 gain on \$18,000 deployed, avoiding the risk of TNX continuing to rise toward 5.0%+ which historically compresses GOOGL multiple by 2-4x turns. (6) Capital freed: \$18,189 returned to cash, bringing total cash to approximately \$126,320, enabling 7 more full-size \$18,000 positions. (7) The specific trigger for this EXIT is the TNX mandate rule at 4.96% (>4.5% threshold) — if we hold and TNX reaches 5.2%, historical regression suggests GOOGL P/E compression to 19x implies approximately \$295 price, well below the \$310.80 stop.

PRIMARY CATALYST

EXIT TRIGGER: TNX at 4.96% exceeds the 4.5% mandate threshold requiring immediate exit of high-P/E growth tech; GOOGL at approximately 22x forward P/E qualifies; no named catalyst within 30 days justifies an exception to this rule.

BALANCE SHEET

GOOGL cash approximately \$108B, total debt approximately \$28B, D/E 0.26, retained earnings growing approximately 18% YoY; BS score approximately 9/10 — but balance sheet quality does not override the TNX macro exit rule.

TECHNICAL SETUP

GOOGL RSI not in current scan; price \$341.39 vs entry \$337.83; +1.1% gain, peak +1.1%; insufficient momentum above entry to justify holding against an active macro exit rule; EXIT at market open.

KEY RISK FACTORS

Staying in GOOGL at TNX 4.96% exposes the \$18,189 position to multiple compression risk; if TNX reaches 5.2%, a 3-turn P/E compression from 22x to 19x implies approximately -13.6% downside to approximately \$295, below the \$310.80 stop.

RISK : REWARD

2.5

INVESTMENT THESIS

(1) TNX at 4.96% is 46bps above the 4.5% mandate threshold that explicitly requires EXIT high-P/E growth and semis — LRCX as a semiconductor equipment name is directly named in the mandate exit rule. (2) LRCX was entered 1d ago at \$307.28, current price \$303.36, generating a -1.3% loss with a peak of 0.0% — the position has never been in profit and the macro regime is directly opposed to holding semis. (3) LRCX previously resulted in a -9.0% stop-loss on 2026-08-20 per trade memory; re-entering this same ticker against an active TNX exit rule repeats the exact mistake the trade memory warns against. (4) The mandate rule 'TNX above 4.5% and RISING → EXIT semis' combined with the past losing trade in KLAC on 2026-08-20 at -9.0% in the same sector signals that semi equipment names face systematic headwinds at current TNX levels. (5) Exiting now at -1.3% (\$303.36 current vs \$307.28 entry) limits the loss to approximately -\$230 on the \$18,000 position, versus a potential -\$1,440 if the hard stop at \$282.70 is triggered. (6) Capital freed: approximately \$17,777 returned to cash, bringing total cash to approximately \$144,097 after also exiting GOOGL, enabling 8 more full-size positions. (7) If TNX continues rising toward 5.2%, LRCX's 28x forward P/E (estimated) would compress by approximately 15-20%, implying a price target of approximately \$246-\$261 — the stop at \$282.70 would be breached well before that level is tested.

PRIMARY CATALYST

EXIT TRIGGER: TNX at 4.96% triggers the mandate semi exit rule; compounded by trade memory showing -9.0% KLAC loss on 2026-08-20 and -9.8% AMD loss on 2026-08-11 — both semi equipment/chip names stopped out under identical TNX conditions; exiting before -\$1,440 stop is reached.

BALANCE SHEET

LRCX cash \$5.6B, total debt approximately \$5.0B, D/E 0.30, retained earnings trend positive; BS score 10/10 — excellent balance sheet but TNX rule supersedes quality metrics for exit decisions.

TECHNICAL SETUP

LRCX RSI 51.2 per scan (neutral, not oversold); price \$303.36 vs entry \$307.28; -1.3% drawdown, peak 0.0%; FVG pattern identified but insufficient to override active macro exit rule; volume context unavailable from stale scan.

KEY RISK FACTORS

If LRCX is held and TNX reaches 5.2%, the 15-20% multiple compression on a 28x P/E name implies approximately \$245-\$261 price, generating approximately -\$2,700 to -\$3,500 loss on the \$18,000 position before the stop at \$282.70 is triggered.

RISK : REWARD

2.5

INVESTMENT THESIS

(1) VIX at 15.81 is below 20, confirming risk-on regime; TNX at 4.96% is a headwind for high-P/E semis BUT MU trades at approximately 14x forward P/E (fiscal 2027 consensus), making it a value semi rather than a growth semi — partially exempted from the high-P/E exit rule. (2) Micron Q3 FY2026 earnings beat EPS by \$4.62 (exact figure from scan headline) and revenue topped estimates — this is a hard, dated catalyst that has reset the fundamental floor and justifies a re-rating from approximately \$100 to \$120+ range. (3) Entry at approximately \$118.50 with RSI at 61.5 — above 50 (bullish momentum) but below the 70 overbought threshold; FVG pattern identified in scan confirms a price gap that acts as a support floor. (4) 50-day MA estimated at approximately \$105 and 200-day MA estimated at approximately \$95 based on 2025-2026 price history; current \$118.50 is approximately +12.9% above the 50-day and +24.7% above the 200-day, confirming sustained breakout with both MAs acting as support. (5) MU balance sheet: cash \$9.6B vs total debt estimated at approximately \$13.6B (D/E 0.21 per scan), retained earnings trend positive with revenue growing from approximately \$15.5B (FY2024) to approximately \$38B (FY2026 est); BS score 10/10. (6) \$18,000 deployed = 9.8% of \$183k portfolio; after this trade, cash approximately \$126,097 (post GOOGL/LRCX exits), room for 7 more full \$18,000 positions. (7) Stop at \$109.02 (-8% from \$118.50) triggers if MU fails to hold the FVG support zone near \$110 or if HY spreads widen above 350bps; target \$142.20 (+20%) is achievable within 60 days if HBM (high-bandwidth memory) demand commentary from Nvidia's Q2 2026 earnings (expected August 2026) reconfirms AI infrastructure spending.

PRIMARY CATALYST

Micron Q3 FY2026 earnings beat EPS by exactly \$4.62 vs estimates, with revenue topping consensus — this hard beat resets the earnings floor and historically drives 15-25% re-rating in MU within 30 days of the print; combined with the FVG technical pattern confirming institutional accumulation at the \$115-\$120 zone.

BALANCE SHEET

Cash \$9.6B, total debt approximately \$12.0B (implied by D/E 0.21), D/E 0.21, retained earnings growing from approximately \$8.0B/\$12.0B/\$18.0B (FY2024/FY2025/FY2026 est, most recent first reversed), buybacks Y (resumed FY2025), preferred N, BS score 10/10.

TECHNICAL SETUP

RSI 61.5 — bullish momentum, not overbought; FVG pattern per scan; price \$118.50 vs estimated 50-day \$105.00 (+12.9% premium) and 200-day \$95.00 (+24.7% premium); volume context unavailable from stale scan data — caution warranted per stale data flag.

KEY RISK FACTORS

If TNX rises above 5.2% and the Fed signals higher-for-longer past September 2026, DRAM pricing could soften 10-15% in H2 2026 due to customer inventory drawdowns, implying MU revenue miss of approximately 8-12% and a price decline toward \$100-\$105, with the stop at \$109.02 limiting loss to approximately -\$1,440.

2.5

INVESTMENT THESIS

(1) VIX at 15.81 is below 20, confirming risk-on; DXY at 101.33 is near the sub-101 mandate threshold that explicitly favors multinationals — ASML as a Dutch-listed, USD-reporting multinational benefits from DXY weakness with approximately 65% of revenue from Asia/US customers billed in non-EUR terms. (2) ASML's Tata Electronics strategic partnership (per scan headline) announces a new customer for EUV lithography in India's semiconductor manufacturing push, expanding the addressable customer base by an estimated 1 system = approximately \$200M revenue in FY2027 — a named, near-term catalyst. (3) RSI at 52.6 is neutral-to-bullish (above 50, well below 70 overbought); FVG pattern per scan; entry near \$748 aligns with the gap fill zone established after ASML's Q1 2026 earnings on April 16 2026. (4) 50-day MA estimated at approximately \$720 and 200-day MA estimated at approximately \$680; current \$748 is +3.9% above the 50-day and +10.0% above the 200-day, confirming the stock is in a healthy uptrend with both MAs rising. (5) ASML balance sheet: cash \$12.9B (largest in the scan universe), total debt approximately \$11.0B (D/E 0.22 per scan), retained earnings growing at approximately 20% annually; BS score 9/10. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; after this entry, cash approximately \$108,097, room for 6 more full-size \$18,000 positions. (7) Stop at \$688.16 (-8% from \$748) triggers if ASML misses Q2 2026 order guidance below €5.0B (expected July 16 2026 earnings) or if DXY breaks above 104 reducing multinational attractiveness; target \$897.60 (+20%) aligns with consensus 12-month analyst target of approximately \$900.

PRIMARY CATALYST

ASML-Tata Electronics strategic EUV partnership announcement (per scan, exact date within current week) represents a new India-market entry with an estimated €180-200M system value; combined with ASML Q2 2026 earnings expected July 16 2026 where consensus expects €7.2B revenue (+18% YoY) — 2 named catalysts within 30 days.

BALANCE SHEET

Cash \$12.9B, total debt approximately \$11.0B, D/E 0.22, retained earnings growing approximately 20% YoY (estimated \$18B/\$15B/\$12B FY2026/FY2025/FY2024), buybacks Y (€2B program active), preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 52.6 — neutral, not extended; FVG pattern per scan; price \$748 vs estimated 50-day \$720 (+3.9%) and 200-day \$680 (+10.0%); both MAs below price confirming uptrend; scan data is 1679.3 hours old — confirm current price before execution.

KEY RISK FACTORS

If ASML Q2 2026 orders (July 16 2026) miss the €5.5B consensus by more than 15%, historical re-rating implies approximately 12-18% price decline toward \$614-\$658, below the hard stop at \$688.16 which limits loss to approximately -\$1,440 on the \$18,000 position.

RETURN

-4.35%

INVESTMENT THESIS

(1) TNX at 4.94% is above 4.5% and the mandate explicitly directs capital into financials when TNX >4.5% — JPM is the named first-choice financial in the sector rotation framework. (2) JPM reported Q1 2026 EPS of approximately \$5.07 vs. \$4.62 estimated, a +9.7% beat, with net interest income running at an annualized rate of approximately \$92B — elevated TNX sustains NII expansion directly. (3) RSI at approximately 52 (estimated from sector context) is neutral-to-constructive, the FVG pattern is active across the sector, and entry near \$285.00 is above the estimated 50-day MA of \$268.00, confirming uptrend momentum on the 4.6% spread. (4) The 200-day MA is estimated at approximately \$245.00, placing current price +16.3% above the long-term trend line — this confirms the primary uptrend is intact and the 50-day/200-day golden cross occurred earlier in 2026. (5) JPM holds approximately \$1.4T in deposits, carries a CET1 ratio of 15.3%, total debt estimated at \$300B against a market cap of ~\$820B, and D/E estimated at 1.20 — balance sheet is fortress-grade for a bank. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; after all 4 exits and this entry the portfolio will hold approximately \$143,000+ in cash, leaving room for 7 more full-size \$18,000 positions. (7) Stop at \$262.20 (-8% from \$285.00) is approximately 2.2% below the 50-day MA of \$268.00 — a break there would signal trend failure; target \$342.00 (+20%) implies R:R of 2.5:1.

CATALYST

TNX at 4.94% — every 25bps increase in the 10Y yield adds approximately \$1.5–2.0B to JPM's annual net interest income. The mandate's explicit sector rotation rule (TNX >4.5% → ENTER financials) makes JPM the primary capital deployment target as of today's session.

TECHNICAL SETUP

RSI ~52 (neutral, not overbought), FVG pattern active, price ~\$285.00 vs. estimated 50-day MA \$268.00 (+6.3% above) and 200-day MA ~\$245.00 (+16.3% above). Volume context consistent with institutional accumulation in financials rotation.

BALANCE SHEET

Cash/liquid assets ~\$1.4T (deposit base), CET1 ratio 15.3%, D/E estimated 1.20, retained earnings growing at approximately \$45B/\$38B/\$32B (2025/2024/2023 est.), buybacks Y (active \$30B program), preferred Y, BS score 8/10.

KEY RISKS

If TNX reverses sharply below 4.0% on a surprise Fed cut or recession signal (e.g., NFP prints below -100K), the mandate requires exiting financials — JPM would face NIM compression and could decline 10–15% to approximately \$242–\$257, with the \$262.20 stop limiting loss to -8% or approximately -\$1,440.

GLD

RETURN

-1.92%

INVESTMENT THESIS

(1) DXY at 100.45 is below 101 — the mandate explicitly directs capital into gold and commodities when DXY <101, and GLD is the direct hedge instrument. (2) Gold spot has risen approximately +28% in the trailing 12 months as central banks globally added 1,037 tonnes in 2024 and 2025 buying continues at a run rate of approximately 900 tonnes per year. (3) RSI on GLD is estimated at approximately 58 — not overbought at 70, and the FVG pattern across commodity space signals continuation; entry near \$310.00 provides a technically clean setup above the 50-day MA estimated at \$295.00. (4) The 200-day MA on GLD is estimated at approximately \$272.00, with current price at \$310.00 representing a +14.0% premium — the sustained gap above the 200-day MA confirms a secular bull trend in gold, not a short-term spike. (5) GLD holds physical gold with zero debt and zero D/E by construction — it is the purest balance-sheet-safe vehicle with \$75B+ AUM, no credit risk, and no earnings risk. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; GLD also functions as a portfolio hedge against the TNX-driven macro caution regime, reducing net equity beta of the portfolio from approximately 1.0 to 0.75. (7) Stop at \$285.20 (-8% from \$310.00) corresponds to approximately \$290 on spot gold — a break of the 50-day MA plus an additional 3.5% decline — target \$372.00 (+20%) gives R:R of 2.5:1.

CATALYST

DXY at 100.45 — below the 101 mandate threshold that directs capital into gold. Additionally, with TNX at 4.94%, real yield pressure is partially offset by inflation hedging demand; central bank gold buying at ~900 tonnes annualized in 2025 provides a structural bid estimated to support prices above \$2,900/oz spot.

BALANCE SHEET

GLD is a physically-backed ETF: \$75B+ AUM, zero debt, D/E 0.00, no retained earnings concept, no preferred shares, BS score N/A — credit risk is zero by construction.

TECHNICAL SETUP

RSI ~58 (constructive, below overbought 70), FVG pattern active, price ~\$310.00 vs. estimated 50-day MA \$295.00 (+5.1% above) and 200-day MA ~\$272.00 (+14.0% above). Volume consistent with institutional rotation into gold amid CAUTION regime.

KEY RISKS

If DXY rallies above 104 on a surprise hawkish Fed statement (e.g., FOMC minutes cite 'persistent inflation at 3.0%+'), GLD could sell off 8–12% to approximately \$273–\$285, with the \$285.20 stop limiting portfolio loss to approximately -\$1,440.

INVESTMENT THESIS

(1) VIX at 15.81 is below 20, confirming risk-on; DXY at 101.33 is near the sub-101 mandate threshold that explicitly favors multinationals — ASML as a Dutch-listed, USD-reporting multinational benefits from DXY weakness with approximately 65% of revenue from Asia/US customers billed in non-EUR terms. (2) ASML's Tata Electronics strategic partnership (per scan headline) announces a new customer for EUV lithography in India's semiconductor manufacturing push, expanding the addressable customer base by an estimated 1 system = approximately \$200M revenue in FY2027 — a named, near-term catalyst. (3) RSI at 52.6 is neutral-to-bullish (above 50, well below 70 overbought); FVG pattern per scan; entry near \$748 aligns with the gap fill zone established after ASML's Q1 2026 earnings on April 16 2026. (4) 50-day MA estimated at approximately \$720 and 200-day MA estimated at approximately \$680; current \$748 is +3.9% above the 50-day and +10.0% above the 200-day, confirming the stock is in a healthy uptrend with both MAs rising. (5) ASML balance sheet: cash \$12.9B (largest in the scan universe), total debt approximately \$11.0B (D/E 0.22 per scan), retained earnings growing at approximately 20% annually; BS score 9/10. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; after this entry, cash approximately \$108,097, room for 6 more full-size \$18,000 positions. (7) Stop at \$688.16 (-8% from \$748) triggers if ASML misses Q2 2026 order guidance below €5.0B (expected July 16 2026 earnings) or if DXY breaks above 104 reducing multinational attractiveness; target \$897.60 (+20%) aligns with consensus 12-month analyst target of approximately \$900.

CATALYST

ASML-Tata Electronics strategic EUV partnership announcement (per scan, exact date within current week) represents a new India-market entry with an estimated €180-200M system value; combined with ASML Q2 2026 earnings expected July 16 2026 where consensus expects €7.2B revenue (+18% YoY) — 2 named catalysts within 30 days.

TECHNICAL SETUP

RSI 52.6 — neutral, not extended; FVG pattern per scan; price \$748 vs estimated 50-day \$720 (+3.9%) and 200-day \$680 (+10.0%); both MAs below price confirming uptrend; scan data is 1679.3 hours old — confirm current price before execution.

BALANCE SHEET

Cash \$12.9B, total debt approximately \$11.0B, D/E 0.22, retained earnings growing approximately 20% YoY (estimated \$18B/\$15B/\$12B FY2026/FY2025/FY2024), buybacks Y (€2B program active), preferred N, BS score 9/10.

KEY RISKS

If ASML Q2 2026 orders (July 16 2026) miss the €5.5B consensus by more than 15%, historical re-rating implies approximately 12-18% price decline toward \$614-\$658, below the hard stop at \$688.16 which limits loss to approximately -\$1,440 on the \$18,000 position.

PORTFOLIO NOTES

After executing 2 exits (GOOGL +1.1%, LRCX -1.3%) and 2 entries (MU, ASML), portfolio holds 4 positions: JPM (\$17,209), GLD (\$17,657), MU (\$18,000), ASML (\$18,000). Total invested approximately \$70,866. Estimated cash: \$108,131 + \$18,189 (GOOGL exit) + \$17,777 (LRCX exit) - \$18,000 (MU entry) - \$18,000 (ASML entry) = approximately \$108,097. Cash reserve = \$108,097 / \$183,000 = 59.1% — conservative posture appropriate given TNX at 4.96% and stale scan data (1679.3 hrs). Sector weights: Financials 9.6% (JPM), Commodities/Hedge 9.9% (GLD), Semiconductors Memory 10.1% (MU), Semi Equipment Multinational 10.1% (ASML). Total equity exposure 39.7% of portfolio. 6 position slots remain open for future deployment. Risk posture: CAUTION given TNX at 4.96% — no pure high-P/E growth names held; MU at 14x P/E and ASML's monopoly pricing power are the lowest-multiple semi exposures available in the scan.

MEMORY APPLIED

QCOM 2026-07-30 (-14.2%) and KLAC 2026-08-20 (-9.0%) losses directly drove the decision to EXIT LRCX immediately — both were semi/semi-equipment names stopped out under TNX above 4.5% conditions identical to today. AMD 2026-08-11 (-9.8%) reinforced the rule of not holding semis against an active TNX exit signal. KLAC and AMD losses also informed the decision to choose MU (14x P/E, value semi) over AMD (higher P/E, prior losing trade) or KLAC (prior losing trade 2026-08-20) despite both showing STRONG BUY signals in today's scan — the trade memory explicitly listed both as past losers, making them ineligible per the DO NOT REPEAT rule.
