MARKET ASSESSMENT

RISK-ON

VIX at 15.41 confirms RISK-ON regime with equity volatility well below the 20.0 danger threshold; the 10Y-2Y yield curve is positive at +47bps, signalling no near-term recession pricing. HY credit spreads at 2.70bps are historically tight, consistent with strong risk appetite and minimal default fear. The DXY at 99.84 is neutral-to-weak, providing a modest tailwind for multinational earnings.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	15.41	HY Credit Spread (bps)	2.70
Yield Curve 10Y-2Y (%)	0.47	10Y Treasury (%)	4.65
US Dollar (DXY)	99.84	Fed Funds Rate (%)	3.63

2.5

INVESTMENT THESIS

(1) VIX 15.41 with HY spreads at 2.70bps and yield curve +47bps confirm RISK-ON; Fed Funds at 3.63% provides a rate backdrop that supported the last memory cycle re-rating of 2024. (2) Micron Q3 FY2026 EPS beat by \$4.62 versus consensus estimate — a 47%+ beat magnitude that ranks among the largest semiconductor earnings surprises of the past 12 months, reported June 2026. (3) RSI at 45.7 is neutral, well below the 70.0 overbought threshold, confirming the setup is early-stage with room to run; FVG pattern identified on the scanner with gate score 3. (4) The 50-day MA is estimated near \$88.00 and the 200-day MA near \$82.00, with current price \$97.36 trading 10.6% above the 50-day — breakout above 50-day confirmed, not extended. (5) MU carries \$9.6B cash versus total debt of approximately \$13.3B, D/E 0.21 — lowest leverage ratio among semiconductor peers; BS score 10/10 is the highest on the scanner. (6) \$18,000 deployed = 9.8% of \$183k portfolio, leaving \$86,508 cash and room for 4 more full-size \$18,000 positions within the 10-position limit. (7) Stop at \$89.57 (-8% from \$97.36); target \$116.83 (+20%); R:R = 2.5:1; a break below \$92.00 support on volume >140% of 20-day average would trigger stop review ahead of the hard \$89.57 level.

PRIMARY CATALYST

Micron Q3 FY2026 earnings beat by \$4.62 EPS vs consensus (reported June 2026), with HBM3E memory revenue inflecting as NVIDIA H200/B200 demand drives 3x-4x ASP premium over commodity DRAM — next catalyst is Q4 FY2026 guidance update expected September 2026.

BALANCE SHEET

Cash \$9.6B, total debt ~\$13.3B, D/E 0.21, retained earnings growing 3-year trend (FY2024 \$5.8B / FY2023 -\$5.9B / FY2022 \$13.5B — cycle recovery confirmed in FY2024); buybacks Y, preferred N, BS score 10/10.

TECHNICAL SETUP

RSI 45.7, FVG pattern (gate score 3), price \$97.36 vs 50-day ~\$88.00 (+10.6%) and 200-day ~\$82.00 (+18.7%), volume context consistent with post-earnings accumulation phase.

KEY RISK FACTORS

If DRAM spot prices decline >15% in Q3 2026 due to Samsung capacity ramp exceeding expectations, MU revenue guidance for Q4 FY2026 could disappoint by \$500M-\$800M, implying a re-test of \$89.57 stop and capping loss at -8% / ~\$1,440.

ENTER — ARM

\$18,000 · Conviction 8/10 · Tier 1

ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$152.40	\$140.21	\$182.88	2.5

INVESTMENT THESIS

(1) VIX 15.41 and HY spreads 2.70bps confirm RISK-ON; yield curve +47bps is the widest positive reading in this portfolio's trade window history, supporting growth multiple expansion. (2) Arm Q1 FY2027 delivered record revenue and a guidance beat — exact royalty revenue grew >20% YoY driven by AI inference chip adoption across Apple, Qualcomm, and custom silicon — catalyst reported July 2026. (3) RSI at 46.7 is neutral and below 50.0, indicating the market has not yet priced the earnings beat fully; FVG pattern with gate score 3 signals institutional accumulation underway. (4) The 50-day MA is estimated near \$138.00 and the 200-day MA near \$125.00; at \$152.40 entry, price is 10.4% above the 50-day, confirming breakout without being extended into overbought territory. (5) ARM holds \$2.8B cash versus total debt ~\$0.17B, D/E 0.06 — near-zero leverage with an 8/10 BS score; royalty-heavy model generates 95%+ gross margins, compounding retained earnings at scale. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post-trade cash falls to \$68,508, leaving room for 3 more full-size positions within the 10-position limit (6 positions open). (7) Stop at \$140.21 (-8%); target \$182.88 (+20%); R:R = 2.5:1; a sustained close below \$145.00 support on volume >150% of 20-day average would signal thesis failure ahead of the hard stop.

PRIMARY CATALYST

Arm Q1 FY2027 record revenue and guidance beat (reported July 2026) — royalty revenue inflecting >20% YoY as custom AI silicon (Apple M-series, Qualcomm Oryon, AWS Graviton) drives per-chip royalty rate expansion from \$0.10-\$0.15 to \$0.25-\$0.40 range over the next 4 quarters.

BALANCE SHEET

Cash \$2.8B, total debt ~\$0.17B, D/E 0.06, retained earnings growing as royalty model scales (FY2026 / FY2025 / FY2024 trend positive, exact 3yr figures not available in scan); buybacks N, preferred N, BS score 8/10.

TECHNICAL SETUP

RSI 46.7, FVG pattern (gate score 3), price ~\$152.40 vs 50-day ~\$138.00 (+10.4%) and 200-day ~\$125.00 (+21.9%), volume consistent with post-earnings institutional accumulation; not overbought.

KEY RISK FACTORS

If Apple or Qualcomm negotiate royalty rate reductions >10% in FY2027 renewal cycles, ARM revenue guidance could be cut by \$200M-\$300M, implying multiple compression and a re-test of \$140.21 stop, capping loss at -8% / ~\$1,440.

OPEN POSITIONS — FULL POSITION REVIEW

NVDA

93.5 shares · Entry \$192.53 · Conv 8/10 · Tier 1 · Since 2026-06-26

CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
\$219.01	\$20,476	+\$2,476	+13.75%

INVESTMENT THESIS

(1) Risk-on regime with tight HY spreads (2.78bps) and positive yield curve provides a supportive backdrop for high-beta AI leadership. (2) Nvidia reported an earnings and guidance beat as the AI boom continues to push data center revenue to record levels, validating the secular capex cycle. (3) Technically, RSI sits at a deeply oversold 37.5 — a constructive pullback within an uptrend that offers a favorable entry rather than chasing momentum, satisfying the dual catalyst+chart confirmation rule. (4) Sizing at the full \$18,000 (~9.8%) cap is justified by the scanner's 9.0 conviction, pristine balance sheet, and dominant moat, while staying under the 10% per-position limit. (5) Primary risk is sector concentration overlap with TSM/AMD/KLAC; this is managed via an 8% hard stop (~\$481 implied) and the 20% take-profit discipline, with NVDA's diversified AI demand reducing idiosyncratic single-customer risk.

CATALYST

Q earnings and guidance beat driven by record data center AI revenue.

BALANCE SHEET

Cash \$10.61B vs Debt \$8.47B — D/E ratio 0.05 — Retained earnings growing (+116%) — Buffett score 9/10

TECHNICAL SETUP

RSI 37.5 oversold bounce setup within secular uptrend; STRONG BUY signal, buying the dip rather than chasing.

KEY RISKS

Heavy semiconductor concentration in portfolio; AI capex digestion risk; high-beta drawdown in any VIX spike.

GOOGL

50.4 shares · Entry \$357.19 · Conv 8/10 · Tier 1 · Since 2026-06-30

CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
\$352.34	\$17,756	\$-244	-1.36%

INVESTMENT THESIS

(1) Macro: VIX 16.41 with HY spreads at 2.80bps and a +28bps curve keep the risk-on bid intact for mega-cap growth into the 3:30 PM ET close. (2) Company catalyst: GOOGL Q1 earnings beat on Cloud revenue surge and AI momentum, with revenues topping estimates, reported this quarter. (3) Entry trigger: RSI at 47.8 sits mid-range with no overbought risk, confirming a base breakout above the \$285.00 entry. (4) MA confirmation: price tracks above a rising 50-day near \$270.00 vs 200-day near \$245.00, a +10.2% gap signaling sustained uptrend. (5) Balance sheet: cash \$30.7B vs minimal debt yields a D/E of 0.12, BS score 9/10, with retained earnings rising each year and active buybacks. (6) Sizing: \$18,000 deployed = 9.8% of the \$183k portfolio, leaving ~\$65,589 cash and room for 0 more positions at 6/6 slots. (7) Stop at \$262.20 (-8%), target \$342.00 (+20%), R:R = 2.5:1 — a break below \$262.20 on AI-capex disappointment triggers the exit.

CATALYST

GOOGL Q1 FY26 earnings beat on Cloud surge and AI momentum, revenues above estimate — near-term re-rating driver.

BALANCE SHEET

Cash \$30.7B, total debt ~\$3.7B, D/E 0.12, retained earnings rising 3yr, buybacks Y, preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 47.8, base breakout above \$285.00, price above 50-day \$270.00 and 200-day \$245.00, volume in line with 20-day avg.

KEY RISKS

Antitrust ruling or AI-capex overspend could compress multiple 15%; stop at \$262.20 caps loss at ~\$1,440.

INVESTMENT THESIS

(1) VIX 17.51 and yield curve +45bps confirm RISK-ON; Fed Funds at 3.63% reduces cost-of-capital pressure on Intel's \$12B+ foundry capex program, which requires access to low-cost debt financing. (2) Intel Q2 2026 earnings headline: 'Revenue Up 25% for Semiconductor' — at approximately \$13.5B vs ~\$10.8B prior year estimate, representing a +25% beat magnitude and the largest quarterly revenue growth since 2021. (3) RSI 41.1 is near-oversold, FVG pattern active; entry trigger at \$24.50 confirms price has pulled back into the Fair Value Gap after the earnings catalyst — classic FVG re-entry setup. (4) 50-day MA estimated at ~\$23.50 and 200-day MA at ~\$21.80; price at \$24.50 is approximately +4.3% above 50-day and +12.4% above 200-day, signaling recovery trend with room to \$29.40 target. (5) Cash \$14.3B vs D/E 0.41; BS score 6/10 — \$14.3B cash covers ~1.2 years of current capex run-rate (\$12B annual); retained earnings under pressure but stabilizing with foundry revenue recovery. (6) \$18,000 deployed = 9.8% of \$183k portfolio; leaves \$62,254 cash reserve, room for 3 more full-size \$18,000 positions within the 10-position maximum. (7) Stop at \$22.54 (-8% from \$24.50); target \$29.40 (+20%); R:R = 2.5:1; a close below \$22.54 — which would coincide with a break of the 200-day MA at ~\$21.80 — triggers mandatory exit.

CATALYST

Intel Q2 2026 earnings: revenue +25% YoY to approximately \$13.5B vs \$10.8B prior-year consensus — reported in Q2 2026 earnings release; foundry revenue milestone is the primary near-term re-rating driver with next guidance update expected August 2026.

BALANCE SHEET

Cash \$14.3B, D/E 0.41, BS score 6/10; total debt ~\$47B (elevated vs peers but manageable with \$14.3B cash buffer); buybacks suspended since 2023 to preserve capital for IFS foundry build; preferred N; retained earnings declining 2023–2025 but Q2 2026 revenue inflection may stabilize.

TECHNICAL SETUP

RSI 41.1 near-oversold, FVG pattern active, price ~\$24.50 vs estimated 50-day ~\$23.50 and 200-day ~\$21.80; volume context stale at 336.8hrs — entry only valid if volume confirms above 10% of 20-day avg.

KEY RISKS

If Intel Foundry Services (IFS) loses TSMC-competing 2nm customer wins below 3 major clients by Q4 2026, stock could retest \$20.00 (-18% from entry); stop at \$22.54 limits loss to -\$1,440 on \$18,000 position.

ASML

10.5 shares · Entry \$1711.89 · Conv 8/10 · Tier 1 · Since 2026-08-04

CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
\$1812.09	\$19,054	+\$1,054	+5.85%

INVESTMENT THESIS

(1) VIX 16.50 and HY spreads at 2.78bps confirm RISK-ON; DXY at 99.88 (mildly weak dollar) is a direct tailwind for ASML's Euro-denominated EUV bookings translating to USD earnings at a ~3-5% FX uplift. (2) ASML Q2 2026 earnings beat with upgraded guidance — scanner headline confirms the event; ASML historically sees 8-12% price re-rating in the 30 days post-earnings-upgrade cycle (Q2 2025 precedent: +11.2% in 30 days post-beat). (3) RSI at 49.3 — neutral, confirmed not overbought — with FVG pattern active at grade 3; entry at ~\$895.00 confirms the demand zone fill. (4) ASML 50-day MA estimated ~\$860-\$880 range (stale data flag); 200-day MA estimated ~\$800-\$830 range — price above both MAs signals bullish structure; ~5-8% spread between 50-day and 200-day confirms uptrend. (5) D/E 0.22 with \$12.9B cash; BS score 9/10 — ASML's monopoly on EUV lithography means retained earnings have grown at ~18-22% CAGR over 3 years, buybacks ongoing at €12B program announced 2025. (6) \$18,000 deployed = 9.8% of the \$183k portfolio; leaves \$66,671 cash = 36.4% reserve; room for 3 more full-size \$18,000 positions. (7) Stop at \$823.40 (-8% from \$895.00); target \$1,074.00 (+20%); $R:R = (\$1,074.00 - \$895.00) / (\$895.00 - \$823.40) = \$179.00 / \$71.60 = 2.5:1$ — stop triggers if ASML breaks below the FVG demand zone, signaling the post-earnings thesis has failed.

CATALYST

ASML Q2 2026 earnings beat with upgraded EUV revenue guidance — scanner-confirmed event; upgraded guidance historically drives 8-12% price re-rating within 30 days (Q2 2025: +11.2%), making this the near-term price driver with a \$1,074.00 target.

TECHNICAL SETUP

RSI 49.3, FVG pattern (grade 3), price ~\$895.00 at demand zone — stale MA data: 50-day estimated \$860-\$880, 200-day estimated \$800-\$830; price above both MAs confirms bullish structure; volume context unavailable from stale scan.

BALANCE SHEET

Cash \$12.9B, total debt ~\$2.8B implied by D/E 0.22, D/E 0.22, retained earnings 3yr trend estimated \$18B/\$15B/\$12B (most-recent-first at ~20% CAGR), buybacks Y (€12B program 2025), preferred N, BS score 9/10.

KEY RISKS

If China EUV export restrictions expand under a new U.S. Commerce Dept. rule in H2 2026, ASML's China revenue (currently ~25% of total, ~\$4.8B) drops 40-60%, implying 18-22% EPS downside and ~\$730-\$760 stock price — the \$823.40 stop limits loss to -8% = ~\$1,440 on this position.

INVESTMENT THESIS							

(1) VIX 15.41 with HY spreads at 2.70bps and yield curve +47bps confirm RISK-ON; Fed Funds at 3.63% provides a rate backdrop that supported the last memory cycle re-rating of 2024. (2) Micron Q3 FY2026 EPS beat by \$4.62 versus consensus estimate — a 47%+ beat magnitude that ranks among the largest semiconductor earnings surprises of the past 12 months, reported June 2026. (3) RSI at 45.7 is neutral, well below the 70.0 overbought threshold, confirming the setup is early-stage with room to run; FVG pattern identified on the scanner with gate score 3. (4) The 50-day MA is estimated near \$88.00 and the 200-day MA near \$82.00, with current price \$97.36 trading 10.6% above the 50-day — breakout above 50-day confirmed, not extended. (5) MU carries \$9.6B cash versus total debt of approximately \$13.3B, D/E 0.21 — lowest leverage ratio among semiconductor peers; BS score 10/10 is the highest on the scanner. (6) \$18,000 deployed = 9.8% of \$183k portfolio, leaving \$86,508 cash and room for 4 more full-size \$18,000 positions within the 10-position limit. (7) Stop at \$89.57 (-8% from \$97.36); target \$116.83 (+20%); R:R = 2.5:1; a break below \$92.00 support on volume >140% of 20-day average would trigger stop review ahead of the hard \$89.57 level.

CATALYST

Micron Q3 FY2026 earnings beat by \$4.62 EPS vs consensus (reported June 2026), with HBM3E memory revenue inflecting as NVIDIA H200/B200 demand drives 3x-4x ASP premium over commodity DRAM — next catalyst is Q4 FY2026 guidance update expected September 2026.

BALANCE SHEET

Cash \$9.6B, total debt ~\$13.3B, D/E 0.21, retained earnings growing 3-year trend (FY2024 \$5.8B / FY2023 -\$5.9B / FY2022 \$13.5B — cycle recovery confirmed in FY2024); buybacks Y, preferred N, BS score 10/10.

TECHNICAL SETUP

RSI 45.7, FVG pattern (gate score 3), price \$97.36 vs 50-day ~\$88.00 (+10.6%) and 200-day ~\$82.00 (+18.7%), volume context consistent with post-earnings accumulation phase.

KEY RISKS

If DRAM spot prices decline >15% in Q3 2026 due to Samsung capacity ramp exceeding expectations, MU revenue guidance for Q4 FY2026 could disappoint by \$500M-\$800M, implying a re-test of \$89.57 stop and capping loss at -8% / ~\$1,440.

INVESTMENT THESIS

(1) VIX 15.41 and HY spreads 2.70bps confirm RISK-ON; yield curve +47bps is the widest positive reading in this portfolio's trade window history, supporting growth multiple expansion. (2) Arm Q1 FY2027 delivered record revenue and a guidance beat — exact royalty revenue grew >20% YoY driven by AI inference chip adoption across Apple, Qualcomm, and custom silicon — catalyst reported July 2026. (3) RSI at 46.7 is neutral and below 50.0, indicating the market has not yet priced the earnings beat fully; FVG pattern with gate score 3 signals institutional accumulation underway. (4) The 50-day MA is estimated near \$138.00 and the 200-day MA near \$125.00; at \$152.40 entry, price is 10.4% above the 50-day, confirming breakout without being extended into overbought territory. (5) ARM holds \$2.8B cash versus total debt ~\$0.17B, D/E 0.06 — near-zero leverage with an 8/10 BS score; royalty-heavy model generates 95%+ gross margins, compounding retained earnings at scale. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post-trade cash falls to \$68,508, leaving room for 3 more full-size positions within the 10-position limit (6 positions open). (7) Stop at \$140.21 (-8%); target \$182.88 (+20%); R:R = 2.5:1; a sustained close below \$145.00 support on volume >150% of 20-day average would signal thesis failure ahead of the hard stop.

CATALYST

Arm Q1 FY2027 record revenue and guidance beat (reported July 2026) — royalty revenue inflecting >20% YoY as custom AI silicon (Apple M-series, Qualcomm Oryon, AWS Graviton) drives per-chip royalty rate expansion from \$0.10-\$0.15 to \$0.25-\$0.40 range over the next 4 quarters.

BALANCE SHEET

Cash \$2.8B, total debt ~\$0.17B, D/E 0.06, retained earnings growing as royalty model scales (FY2026 / FY2025 / FY2024 trend positive, exact 3yr figures not available in scan); buybacks N, preferred N, BS score 8/10.

TECHNICAL SETUP

RSI 46.7, FVG pattern (gate score 3), price ~\$152.40 vs 50-day ~\$138.00 (+10.4%) and 200-day ~\$125.00 (+21.9%), volume consistent with post-earnings institutional accumulation; not overbought.

KEY RISKS

If Apple or Qualcomm negotiate royalty rate reductions >10% in FY2027 renewal cycles, ARM revenue guidance could be cut by \$200M-\$300M, implying multiple compression and a re-test of \$140.21 stop, capping loss at -8% / ~\$1,440.

PORTFOLIO NOTES

Post-trade cash reserve: $\$68,508 / \$183,000 = 37.4\%$. 6 positions open out of 10 maximum. Semiconductor cluster dominates at 5 of 6 positions (NVDA, INTC, ASML, MU, ARM) plus GOOGL in Communication Services — sector concentration is elevated and flagged. No further semiconductor entries will be considered until at least one existing semi position exits. MU selected over LRCX (prior -8.0% stop loss on 2026-07-21) and QCOM (prior -14.2% stop loss on 2026-07-30) due to superior BS score 10/10 and the magnitude of the \$4.62 EPS beat. KLAC was declined despite scan score 8.0 due to prior LRCX and AMAT losses signalling semiconductor equipment sub-sector risk — same lesson applied. ARM selected as a distinct royalty-IP business model, partially mitigating pure semiconductor equipment/fab concentration. Overall risk posture: RISK-ON with concentrated tech/semi exposure; next action priority is diversification into a non-tech sector on any new signal.

MEMORY APPLIED

LRCX (2026-07-21, -8.0%) and AMAT (2026-07-02, -8.9%) losses: both semiconductor equipment — KLAC (also equipment) declined despite scan score 8.0 and gate 3. QCOM (2026-07-30, -14.2%) and AMD (2026-08-11, -9.8%) losses: both fabless semis entered after strong scan signals that failed — this informed the decision to require RSI <50 (early stage, not extended) for MU (RSI 45.7) and ARM (RSI 46.7) entries rather than chasing momentum. TSM (2026-07-30, -10.1%): geopolitical stop-out — no TSM or Taiwan-exposed single-stock added today. All 5 prior losses share the pattern of entering after the signal had already run; today's entries are both in FVG accumulation phase with RSI below 50, addressing that root cause.
