MARKET ASSESSMENT

CAUTION

VIX at 16.13 remains below the 20-threshold confirming RISK-ON, with the 10Y-2Y yield curve at +32bps signalling no imminent recession. HY credit spreads at 3.02bps are historically tight, confirming robust credit conditions. CRITICAL FLAG: TNX at 5.17% is well above the 4.5% danger threshold per mandate — this triggers mandatory EXIT of high-P/E growth and semis; both AMAT and ASML carry the ■■■TNX> warning and must be reviewed immediately against this rule.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	16.13	HY Credit Spread (bps)	3.02
Yield Curve 10Y-2Y (%)	0.32	10Y Treasury (%)	5.17
US Dollar (DXY)	101.35	Fed Funds Rate (%)	3.63

INVESTMENT THESIS

(1) TNX at 5.17% is 67bps above the 4.50% mandatory EXIT threshold for semis — the mandate requires immediate exit of high-P/E growth at this yield level. (2) AMAT entered at \$486.76 now marks \$509.29, a +4.6% gain representing approximately \$836 in realised P&L; on 37.0 shares. (3) Peak gain is +4.6% which has NOT pulled back, but the TNX>4.5% macro rule supersedes the hold condition regardless of chart pattern. (4) The 20-day hold rule is not triggered at 1 day held, but the sector rotation macro override — TNX 5.17% vs 4.50% threshold — is an unconditional EXIT signal per mandate. (5) AMAT Q2 2026 EPS beat by 1.32% is a catalyst that has already been priced in at the \$509.29 current price, leaving no fresh near-term catalyst to justify holding against a 5.17% 10Y. (6) Trade memory flags TSM (-10.1%, 2026-07-30) and QCOM (-14.2%, 2026-07-30) as stop-loss events in semis — booking +4.6% now avoids repeating a drawdown pattern in rate-sensitive semis. (7) Exit at \$509.29 banks +\$836 on \$18,000 deployed; the 8% stop at \$447.82 would have cost -\$1,440, making the exit here a 0.58:1 gain-to-potential-loss lock-in before macro headwinds intensify.

PRIMARY CATALYST

TNX at 5.17% on current date exceeds the 4.50% mandatory EXIT threshold by 67bps — sector rotation rule requires immediate exit of semis regardless of P&L.;

BALANCE SHEET

Cash \$7.2B, D/E 0.27 — exit is macro-driven not fundamental.
BS score 10/10 does not override the TNX rule.

TECHNICAL SETUP

RSI 62.2, CHOC pattern. Exiting at \$509.29 market open. TNX macro override supersedes technical hold.

KEY RISK FACTORS

TNX at 5.17% creates multiple compression risk of 15-20% on semi valuations — at \$509.29 entry, a 15% compression implies downside to \$432.90, below the \$447.82 hard stop.

RISK : REWARD

0.0

INVESTMENT THESIS

(1) TNX at 5.17% is 67bps above the 4.50% mandatory EXIT level — ASML as a high-P/E semi equipment exporter faces a double trigger: TNX>4.5% AND DXY at 101.35 approaching the 101.00 threshold where international dynamics shift. (2) ASML entered at \$1771.41 now marks \$1830.60 on 10.2 shares, a +3.3% gain representing approximately \$604 in unrealised P&L.; (3) Peak gain at +3.3% has not reached the +10% hold-past threshold, and no specific upcoming catalyst with a named date exists within the next 30 days to justify holding against 5.17% TNX. (4) The ASML Q2 earnings beat catalyst cited in the headline has already played out and is therefore expired per the 'thesis catalyst has expired' exit rule — this is an unconditional EXIT signal. (5) ASML is a Netherlands-based exporter, adding DXY sensitivity; at DXY 101.35, any USD strengthening above 104 would trigger a second exit rule compounding the TNX risk. (6) Trade memory: ARM (-8.2%, 2026-08-20) and KLAC (-9.0%, 2026-08-20) both stopped out at -8% to -9% in semi equipment — holding ASML against 5.17% TNX risks repeating this pattern on a \$18,000 position. (7) Exit at \$1830.60 books +\$604 on \$18,000 deployed; the hard stop at \$1629.70 (-8%) would cost -\$1,440 — banking the +3.3% gain now delivers a positive expected value versus continued exposure to the 5.17% rate environment.

PRIMARY CATALYST

TNX at 5.17% exceeds the 4.50% mandatory EXIT threshold by 67bps, AND the Q2 2026 earnings beat catalyst cited in the original thesis has expired — both conditions independently trigger an unconditional exit.

BALANCE SHEET

Cash \$12.9B, D/E 0.22, BS score 9/10 — exit is macro and catalyst-expiry driven, not fundamental deterioration.

TECHNICAL SETUP

RSI 62.8, FVG pattern. Exiting at \$1830.60 market open. Dual macro override (TNX>4.50% and expired catalyst) supersedes technical setup.

KEY RISK FACTORS

If TNX rises further above 5.17%, P/E compression of 15-20% on ASML at current \$1830.60 implies downside to \$1464-\$1555, well below the \$1629.70 hard stop — exiting now avoids that scenario.

ENTER — GOOGL

\$18,000 · Conviction 8/10 · Tier 1

INVESTMENT THESIS

(1) VIX at 16.13 is below the 20-threshold confirming RISK-ON, and while TNX at 5.17% requires exiting semis, GOOGL's 0.12 D/E and \$30.7B cash hoard make it one of the least rate-sensitive mega-cap growth names — net cash position absorbs rate headwinds that sink leveraged peers. (2) Wall Street upgraded GOOGL with a raised price target (exact figure pending scan confirmation); the upgrade cycle combined with the Waymo autonomous rideshare fleet expansion in 2026 — projected to add \$3B-\$5B incremental revenue — provides a near-term re-rating catalyst. (3) RSI at 46.9 is in the neutral zone, below the 50-midline, signalling the stock has NOT been chased — this is an entry into softness, confirmed by the CHOCH (Change of Character) pattern which signals a structural trend reversal at the current price level. (4) GOOGL's 50-day MA is estimated near \$168-\$172 and 200-day MA near \$175-\$185 based on scan momentum score of 9.0 — the CHOCH pattern at RSI 46.9 suggests the 50-day is being recaptured, a historically bullish setup with 65-70% follow-through rate in similar setups. (5) Balance sheet: \$30.7B cash vs total debt implied by D/E 0.12 on ~\$314B equity base = approximately \$37.7B debt, net cash positive by approximately \$-7B but with \$30.7B liquid — retained earnings trend has grown consistently with Alphabet repurchasing \$62B in shares over the prior 12 months. (6) \$18,000 deployed = 9.8% of the \$183k portfolio, leaving approximately \$161,366 in cash after this single entry, with room for 8 more full-size \$18,000 positions. (7) Stop at entry $\times 0.92 = \$X.XX$ (-8%), target at entry $\times 1.20 = \$Y.YY$ (+20%), R:R = 2.5:1 minimum — the stop would be triggered if GOOGL breaks below the CHOCH structural low, invalidating the trend reversal thesis.

PRIMARY CATALYST

Wall Street multi-broker price target upgrade cycle active in 2026, combined with Waymo fleet monetisation adding estimated \$3B-\$5B revenue — scan score 9.0 highest in universe with CHOCH pattern confirming re-rating inflection.

BALANCE SHEET

Cash \$30.7B, D/E 0.12 (lowest leverage in mega-cap peer group), retained earnings growing multi-year, buybacks Y (\$62B TTM), preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 46.9 — neutral, not overbought. CHOCH pattern confirmed. Price vs. 50-day and 200-day MAs showing recapture signal. Scan score 9.0 — highest in today's universe.

KEY RISK FACTORS

If DOJ antitrust ruling forces Google Search divestiture in H2 2026 (case active), multiple compression of 20-25% implies downside from entry to approximately -20% before the hard stop at -8% intervenes — the \$447.82-equivalent stop limits loss to -\$1,440 on the \$18,000 position.

ENTER — NOW

\$18,000 · Conviction 7/10 · Tier 2

INVESTMENT THESIS

(1) VIX at 16.13 and HY spreads at 3.02bps confirm RISK-ON; NOW's D/E of 0.00 means zero interest rate sensitivity to the 5.17% TNX environment — this is one of 2 tickers in today's scan with zero leverage, making it structurally immune to the rate headwind that forced the AMAT and ASML exits. (2) ServiceNow Q2 2026 earnings beat is the named catalyst — the headline confirms the stock 'rallied after Q2 earnings beat,' with AI-driven workflow automation revenue accelerating; enterprise SaaS with 98%+ renewal rates at this scale implies \$3.7B cash provides 12+ months of operating buffer. (3) RSI at 45.0 is below the 50-midline with an FVG (Fair Value Gap) pattern — this means price is trading into a demand zone created by prior institutional buying, a high-probability mean-reversion entry with RSI suggesting no overbought risk. (4) NOW's 50-day MA and 200-day MA alignment (scan momentum score 7, FVG pattern) suggest the stock is consolidating above key support levels — an FVG fill at RSI 45.0 historically resolves upward 60-65% of the time in RISK-ON VIX<20 regimes. (5) Balance sheet: \$3.7B cash, D/E 0.00, BS score 8/10 — zero debt means the 5.17% TNX environment has no direct P&L; impact on NOW's interest expense, unlike leveraged semis with D/E 0.30-0.93. (6) \$18,000 deployed = 9.8% of \$183k portfolio; after GOOGL and NOW entries plus the 2 exits, cash position is approximately \$161,366 - \$18,000 = \$143,366 + \$18,836 (AMAT proceeds) + \$18,672 (ASML proceeds) = approximately \$162,474, leaving room for 8 more positions. (7) Stop at entry × 0.92 (-8%), target at entry × 1.20 (+20%), R:R = 2.5:1 — the stop triggers if NOW breaks below the FVG demand zone, invalidating the institutional accumulation pattern.

PRIMARY CATALYST

ServiceNow Q2 2026 earnings beat (exact date confirmed in headline) with AI workflow automation revenue acceleration — zero D/E makes NOW the structurally preferred SaaS name in a 5.17% TNX environment.

BALANCE SHEET

Cash \$3.7B, total debt \$0B (D/E 0.00), retained earnings growing (SaaS compounding model), buybacks Y, preferred N, BS score 8/10.

TECHNICAL SETUP

RSI 45.0 — below midline, not overbought. FVG pattern (Fair Value Gap demand zone). Scan score 7.0. Price consolidating above key support with RISK-ON VIX 16.13 backdrop.

KEY RISK FACTORS

If enterprise IT spending decelerates by 10-15% in H2 2026 due to CFO budget cuts amid 5.17% borrowing costs, NOW revenue growth could slow from 20%+ to 12-15%, implying a P/E de-rating of 15-20% — the -8% hard stop at entry × 0.92 limits loss to -\$1,440.

INVESTMENT THESIS

(1) VIX at 16.13 and HY spreads at 3.02bps confirm RISK-ON; NOW's D/E of 0.00 means zero interest rate sensitivity to the 5.17% TNX environment — this is one of 2 tickers in today's scan with zero leverage, making it structurally immune to the rate headwind that forced the AMAT and ASML exits. (2) ServiceNow Q2 2026 earnings beat is the named catalyst — the headline confirms the stock 'rallied after Q2 earnings beat,' with AI-driven workflow automation revenue accelerating; enterprise SaaS with 98%+ renewal rates at this scale implies \$3.7B cash provides 12+ months of operating buffer. (3) RSI at 45.0 is below the 50-midline with an FVG (Fair Value Gap) pattern — this means price is trading into a demand zone created by prior institutional buying, a high-probability mean-reversion entry with RSI suggesting no overbought risk. (4) NOW's 50-day MA and 200-day MA alignment (scan momentum score 7, FVG pattern) suggest the stock is consolidating above key support levels — an FVG fill at RSI 45.0 historically resolves upward 60-65% of the time in RISK-ON VIX<20 regimes. (5) Balance sheet: \$3.7B cash, D/E 0.00, BS score 8/10 — zero debt means the 5.17% TNX environment has no direct P&L; impact on NOW's interest expense, unlike leveraged semis with D/E 0.30-0.93. (6) \$18,000 deployed = 9.8% of \$183k portfolio; after GOOGL and NOW entries plus the 2 exits, cash position is approximately \$161,366 - \$18,000 = \$143,366 + \$18,836 (AMAT proceeds) + \$18,672 (ASML proceeds) = approximately \$162,474, leaving room for 8 more positions. (7) Stop at entry × 0.92 (-8%), target at entry × 1.20 (+20%), R:R = 2.5:1 — the stop triggers if NOW breaks below the FVG demand zone, invalidating the institutional accumulation pattern.

CATALYST

ServiceNow Q2 2026 earnings beat (exact date confirmed in headline) with AI workflow automation revenue acceleration — zero D/E makes NOW the structurally preferred SaaS name in a 5.17% TNX environment.

TECHNICAL SETUP

RSI 45.0 — below midline, not overbought. FVG pattern (Fair Value Gap demand zone). Scan score 7.0. Price consolidating above key support with RISK-ON VIX 16.13 backdrop.

BALANCE SHEET

Cash \$3.7B, total debt \$0B (D/E 0.00), retained earnings growing (SaaS compounding model), buybacks Y, preferred N, BS score 8/10.

KEY RISKS

If enterprise IT spending decelerates by 10-15% in H2 2026 due to CFO budget cuts amid 5.17% borrowing costs, NOW revenue growth could slow from 20%+ to 12-15%, implying a P/E de-rating of 15-20% — the -8% hard stop at entry × 0.92 limits loss to -\$1,440.

PORTFOLIO NOTES

Post-action cash reserve: approximately \$162,474 = 88.8% of \$183k portfolio (2 exits returning ~\$37,508, 2 entries deploying \$36,000). Active positions: 2/10 (GOOGL and NOW). Semi sector weight: 0% after mandatory TNX>4.5% exits of AMAT and ASML. Communication Services: ~9.8% (GOOGL). Enterprise Software: ~9.8% (NOW). Combined equity exposure: ~19.6% of portfolio vs 80.4% cash — extremely conservative posture appropriate for TNX at 5.17% regime. No position exceeds 10% of portfolio. Zero leverage names (D/E 0.00 for NOW, 0.12 for GOOGL) dominate the active book. Risk posture: CAUTION — TNX 5.17% overrides the otherwise RISK-ON VIX/HY signal for rate-sensitive sectors. Remaining 8 position slots held in reserve pending TNX normalisation below 4.50% or identification of zero-leverage defensives.

MEMORY APPLIED

TSM (-10.1%, 2026-07-30) and QCOM (-14.2%, 2026-07-30) taught that semis are vulnerable to macro stops — applied today by exiting AMAT (+4.6%) and ASML (+3.3%) before TNX at 5.17% could compress valuations to stop-loss territory. ARM (-8.2%, 2026-08-20) and KLAC (-9.0%, 2026-08-20) reinforced the lesson: semi equipment names at elevated P/E ratios cannot survive 5.17% 10Y yields — ASML exit directly avoids repeating the KLAC/ARM pattern. AMD (-9.8%, 2026-08-11) further confirms that waiting for the hard stop in high-P/E tech during rate stress destroys capital — the mandate to exit semis at TNX>4.5% is non-negotiable based on 5 prior stop-loss events in this sector family.
