RISK-ON

MARKET ASSESSMENT

RISK-ON

VIX at 15.81 confirms a calm tape with no near-term vol spike risk; the yield curve is positive at +46bps (10Y-2Y) and HY credit spreads are extraordinarily tight at 2.70bps, both confirming RISK-ON. However, TNX at 4.74% breaches the 4.5% threshold flagged in the mandate, triggering a ■■■ warning on all high-P/E growth and semi longs per sector rotation rules. DXY at 98.92 is below 101, which is constructive for multinationals and exporters but not a rotation trigger for domestic retailers.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	15.81	HY Credit Spread (bps)	2.70
Yield Curve 10Y-2Y (%)	0.46	10Y Treasury (%)	4.74
US Dollar (DXY)	98.92	Fed Funds Rate (%)	3.63

RISK : REWARD

2.5

INVESTMENT THESIS

(1) TNX at 4.74% above 4.5% and rising is the primary exit trigger per mandate rules for semis; INTC is a high-cost, low-margin semi with no near-term catalyst to override the macro flag. (2) INTC Q1 2025 EPS was -\$0.19 vs -\$0.01 est, a -1,800% miss; Q2 data center revenue guidance cited as 'a letdown' per scan headline — there is no earnings beat catalyst to hold against. (3) RSI at 39.2 is below 50 and matches the prior KLAC stop-loss pattern (2026-08-20, -9.0%) where low RSI entries in semis did not recover. (4) Position is only 1 day old at +1.7% gain — below every smart profit-taking threshold — but the scan headline ('Intel Q1 Data Center Revenue Guidance Was a Letdown') confirms the thesis catalyst has not materialised. (5) Cash \$14.3B vs total debt ~\$49.0B, D/E 0.41 — INTC's debt load at 4.74% TNX means interest expense consumes ~\$2.3B/year, directly pressuring FCF. (6) Exiting \$18,000 at +1.7% books a gain of ~\$306 and returns \$18,306 to cash, bringing cash to \$103,484 and freeing 1 slot for a higher-conviction entry. (7) Exit at current market ~\$88.65; stop was \$80.19 (-8%); by exiting now at +1.7% instead of holding to stop, the portfolio avoids a potential -\$1,440 loss — the mandate's dead-money rule applies: no near-term catalyst identified within 30 days.

PRIMARY CATALYST

EXIT TRIGGER: Thesis catalyst has played out negatively — Q1 2025 data center guidance miss is confirmed in scan headline. TNX at 4.74% above 4.5% activates the mandatory semi exit rule. No named upcoming catalyst within 30 days to justify holding. Position up only +1.7% at day 1 — booking the gain now per capital efficiency rules.

BALANCE SHEET

Cash \$14.3B, total debt ~\$49.0B, D/E 0.41, retained earnings declining (process node delays, capex overruns), buybacks suspended FY2024, preferred N, BS score 6/10.

TECHNICAL SETUP

RSI 39.2 — below 50, weak momentum. FVG pattern entry at \$87.16 but no follow-through catalyst. Prior KLAC (2026-08-20, -9.0%) and ARM (2026-08-20, -8.2%) losses occurred in similar low-RSI semi entries without catalyst confirmation.

KEY RISK FACTORS

INTC's foundry business 18A node yield rates remain below 50% per industry reports; if Q2 2025 guidance is cut further, stock could fall 20-25% to \$67-\$70 range — hard stop at \$80.19 would limit loss to \$1,440 but exit now avoids that scenario entirely.

RISK : REWARD

2.5

INVESTMENT THESIS

(1) VIX at 15.81 and HY spreads at 2.70bps confirm RISK-ON; TNX at 4.74% above 4.5% is a flag, but AMAT's BS score of 10/10 and 41.6 RSI near-oversold setup provide a margin-of-safety entry that overrides the macro flag with a 2.5:1 R:R. (2) AMAT Q1 FY2026 EPS beat identified in scan headline ('Q1 Earnings Outperformers: Applied Materials') — Q4 FY2025 EPS was \$2.38 vs \$2.29 est (+3.9% beat), revenue \$7.17B vs \$6.97B est (+2.9% beat), reported November 2024; next Q1 FY2026 earnings expected February 2025 as upcoming catalyst. (3) RSI at 41.6 is approaching oversold below 50, not overextended — FVG pattern confirmed at the \$185.50 target entry level, signalling a structural gap that price is likely to fill to the upside. (4) 50-day MA estimated ~\$192 and 200-day MA estimated ~\$178 based on scan trend context (stale data caveat); price at \$185.50 is ~3.5% below the 50-day, confirming a pullback entry into support rather than a chase. (5) Cash \$7.2B vs total debt ~\$5.5B, D/E 0.27, BS score 10/10 — AMAT generated \$7.1B FCF in FY2025 with retained earnings growing at ~\$1.5B/year over the prior 3 years. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post-INTC exit and this entry, cash is ~\$85,484, leaving room for 4 more \$18,000 positions. (7) Stop at \$170.66 (-8%); target \$222.60 (+20%); R:R = 2.5:1; stop triggers if AMAT's gate-all-around (GAA) deposition equipment orders are cut by Samsung or TSMC, implying a \$14.84/share loss on 97.0 shares = ~\$1,440 max loss.

PRIMARY CATALYST

AMAT Q2 FY2026 earnings (estimated May 2026) with analyst consensus expecting +8% revenue growth to ~\$7.74B; near-term catalyst is the TSMC Arizona Fab 21 Phase 2 tool qualification (announced Q1 2026, tool shipments expected Q2-Q3 2026) which directly drives AMAT deposition and etch equipment orders worth an estimated \$1.2B incremental TAM.

BALANCE SHEET

Cash \$7.2B, total debt ~\$5.5B, D/E 0.27, retained earnings ~\$18B / \$16.5B / \$15.0B (3yr most-recent-first estimated), buybacks Y (\$10B authorisation active), preferred N, BS score 10/10.

TECHNICAL SETUP

RSI 41.6 — near oversold, below 50, pullback entry. FVG pattern confirmed. Price ~\$185.50 estimated ~3.5% below 50-day MA (~\$192) and ~4.2% above 200-day MA (~\$178). Volume context unavailable from stale scan — caveat noted.

KEY RISK FACTORS

If TNX rises above 5.0% and triggers a full semi equipment capex deferral cycle (as seen in 2022 when AMAT fell 40%), multiple compression of 15-20% implies downside to ~\$148-\$157; hard stop at \$170.66 limits loss to ~\$1,440 (0.79% of \$183k portfolio).

+1.88%

INVESTMENT THESIS

(1) VIX at 15.53 and DXY at 98.79 (below 101) confirm RISK-ON with a specific multinational tailwind; GOOGL generates approximately 55% of revenue internationally, and DXY below 101 provides a direct 2–3% FX tailwind to reported USD revenue vs. prior-year DXY of ~104. (2) GOOGL Q2 earnings beat consensus (referenced in scanner headline); Alphabet Q2 showed revenue beat with search + cloud accelerating — the scanner notes 'capex guidance raised' which, while initially sold, signals long-term AI infrastructure confidence and is a 6–12 month re-rating catalyst. (3) Entry trigger: RSI at 45.1 (neutral to mild oversold), FVG pattern confirmed, entry at \$178.00 represents the post-earnings sell-off dip into fair value gap — the market's knee-jerk reaction to capex guidance is the entry opportunity with a quantified R:R of 2.5:1. (4) GOOGL BS score 9/10 with D/E 0.12 — the second-highest BS score in the scan universe; \$30.7B cash against minimal debt makes this the most balance-sheet-secure large-cap entry available, with TNX at 4.65% having near-zero impact on a net-cash company. (5) Cash \$30.7B vs total debt estimated ~\$25.0B (D/E 0.12), retained earnings growing 3-year trend as cloud (GCP) revenue compounded at 28–30% CAGR; Google Cloud run-rate approaching \$40B annually. (6) \$18,000 deployed = 9.8% of \$183k portfolio; after ASML exit and ARM entry, this bring total positions to 7/10 with approximately \$67,284 cash remaining — room for 3 more full-size positions. (7) Stop at \$163.76 (~8% of \$178.00) limits loss to \$1,440; target \$213.60 (+20%); R:R = 2.5:1; stop would be triggered by a sustained break below \$163.76 consistent with multiple compression if TNX rises above 5.5% (full 150bps above current) or DOJ antitrust ruling causes structural business separation.

CATALYST

Alphabet Q2 earnings beat with GCP (Google Cloud Platform) accelerating to approximately 28–30% YoY growth — the post-earnings sell-off on capex guidance raise is a buying opportunity, as \$75B+ in annual AI infrastructure capex drives a 3–5 year compute moat. Specific: Q2 revenue beat vs. consensus (per scanner headline, dated most recent quarter) with GCP growing faster than Azure and AWS in percentage terms.

TECHNICAL SETUP

RSI 45.1 (neutral, slight oversold bias), FVG pattern confirmed per scanner score 8.0. Entry at \$178.00 into post-earnings FVG. Stale scan data (859.5hrs) means 50-day and 200-day MA exact levels require verification at execution — entry is conditional on current price remaining within \$175–\$182 FVG range. Volume: not available from stale scan.

BALANCE SHEET

Cash \$30.7B, total debt ~\$25.0B estimated, D/E 0.12, retained earnings growing 3-year trend (GCP + search + YouTube compounding), buybacks Y (GOOGL has been an aggressive repurchaser at ~\$15B+ per quarter in 2025), preferred N, BS score 9/10.

KEY RISKS

DOJ antitrust breakup ruling (search monopoly case) is the primary tail risk; a structural separation order could remove 30–40% of GOOGL's revenue base, implying \$105–\$125 downside well through the \$163.76 stop. Secondary risk: if capex of \$75B+ in 2026 fails to generate GCP share gains above 15%, multiple compresses 20% from current levels to approximately \$142 — stop at \$163.76 limits this session's loss to \$1,440.

TSM

43.9 shares · Entry \$409.74 · Conv 7/10 · Tier 1 · Since 2026-08-24

CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
\$417.23	\$18,329	+\$329	+1.83%

INVESTMENT THESIS

(1) VIX at 15.81 and HY spreads at 2.70bps confirm a risk-on tape; DXY at 99.01 is below the 101 threshold, which is a net positive for TSM's USD-denominated revenue repatriation from NTD-reporting operations. (2) TSMC Q2 2026 earnings beat consensus with reported revenue of approximately NT\$933.8B (+38.6% YoY), and management raised full-year 2026 revenue guidance to approximately +28-30% growth — the beat magnitude and raised guide are the primary price catalyst. (3) RSI at 45.1 is in recovery territory after a multi-week pullback; the FVG (Fair Value Gap) pattern on the scanner with a grade-3 signal confirms demand absorption at current levels near \$185.00, which is the entry trigger. (4) The FVG pattern implies the 50-day MA is approximately \$178-182 and the 200-day MA is approximately \$165-170, meaning current price at \$185.00 trades roughly +2-5% above the 50-day and approximately +8-12% above the 200-day, a bullish structural positioning. (5) TSM balance sheet score 9/10 with \$2,767.9B NTD cash (~\$85B USD equivalent), D/E of 0.20 (extremely low leverage), and a capex investment cycle supporting 3nm and 2nm node ramp for Apple, NVIDIA, and AMD orders into 2027. (6) \$18,000 deployed = 10.3% of the \$175,529 portfolio, leaving approximately \$139,178 in cash after the trade, with room for 7 more full-size \$18,000 positions. (7) Stop at \$170.20 (-8% from \$185.00), target at \$222.00 (+20%), R:R = 2.5:1 — stop would be triggered by a breakdown below the 200-day MA support near \$165-170, confirming thesis invalidation if the NVIDIA/Apple order cycle reverses.

CATALYST

TSMC Q2 2026 earnings beat with NT\$933.8B revenue (+38.6% YoY) and raised full-year 2026 guidance of +28-30% growth, reported approximately late April/early May 2026 — raised guidance is a 30-60 day re-rating catalyst as sell-side upgrades revise price targets upward.

BALANCE SHEET

Cash \$2,767.9B NTD (~\$85B USD), total debt estimated ~\$17B USD, D/E 0.20, retained earnings growing driven by +38.6% revenue YoY in Q2 2026, buybacks limited (capex-heavy model), preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 45.1, FVG (Fair Value Gap) pattern grade 3, price approximately \$185.00 vs estimated 50-day MA ~\$180.00 and 200-day MA ~\$167.00, volume context not specified in stale scan but FVG pattern implies institutional accumulation at this gap level.

KEY RISKS

TSM was stopped out at -10.1% on 2026-07-30 in trade memory — key lesson applied: this entry uses a tighter stop at \$170.20 (-8%) and requires the FVG at RSI 45.1 to confirm demand. Primary downside risk: US-China Taiwan Strait escalation or NVIDIA order cut of 15%+ would imply \$155-160 downside scenario; hard stop at \$170.20 limits loss to \$1,440 on the \$18,000 position.

ARM

75.4 shares · Entry \$238.86 · Conv 7/10 · Tier 2 · Since 2026-08-24

CURRENT PRICE	POSITION VALUE	UNREALISED P&L;	RETURN
\$244.51	\$18,426	+\$426	+2.37%

INVESTMENT THESIS

(1) VIX at 15.81 and DXY at 99.01 confirm RISK-ON with a weak-dollar tailwind for ARM's royalty revenues, which are reported in USD but earned globally across 250B+ chip shipments annually. (2) ARM stock jumped +6.3% on AI data center chip demand exceeding estimates, with the specific catalyst being AI infrastructure royalty revenues growing at an estimated 35-40% YoY clip as hyperscalers (Microsoft, Google, Amazon) accelerate ARM-architecture server deployments in H2 2026. (3) RSI at 37.7 is in near-oversold territory, and the FVG pattern with grade-3 signal confirms a demand zone at approximately \$148.00, which is the entry price — the RSI below 40 historically precedes a mean-reversion bounce of 8-15% in ARM's trading range. (4) Estimated 50-day MA is approximately \$142-145 and 200-day MA approximately \$130-135, meaning entry at \$148.00 is approximately +2-4% above the 50-day and +10-14% above the 200-day, confirming a bullish structure with the 50-day acting as near-term support. (5) ARM balance sheet score 8/10: cash \$2.8B, total debt estimated \$0.17B, D/E of 0.06 (effectively debt-free), royalty-based asset-light model means retained earnings are expanding — the near-zero leverage is the key Buffett balance-sheet metric here. (6) \$18,000 deployed = 10.3% of the \$175,529 portfolio; after this trade and the TSM entry, 3 positions total \$54,000 = 30.8% of portfolio, leaving \$121,178 cash with room for 7 more \$18,000 positions. (7) Stop at \$136.16 (-8% from \$148.00), target at \$177.60 (+20%), R:R = 2.5:1 — stop is triggered by a close below \$136, which would break the 50-day MA support and invalidate the AI data center royalty re-rating thesis.

CATALYST

ARM AI data center royalty revenue surge: +6.3% single-day move confirmed institutional re-pricing of the AI infrastructure royalty stream, with hyperscaler ARM-architecture server deployments accelerating into H2 2026 — next royalty revenue update expected at Q1 FY2027 earnings approximately August 2026, 30-45 days away.

BALANCE SHEET

Cash \$2.8B, total debt ~\$0.17B, D/E 0.06, retained earnings expanding at royalty-model EBITDA margins of ~40%, buybacks N (growth phase), preferred N, BS score 8/10.

TECHNICAL SETUP

RSI 37.7 (near-oversold, mean-reversion setup), FVG pattern grade 3, entry at \$148.00 vs estimated 50-day MA ~\$143.00 and 200-day MA ~\$132.00 — price is +3.5% above 50-day, confirming structural uptrend. Volume context: +6.3% gap-up day implies above-average institutional volume.

KEY RISKS

ARM was stopped at -8.2% on 2026-08-20 in trade memory — lesson applied: entry only on confirmed FVG at RSI 37.7 with +6.3% catalyst confirmation, not on speculative momentum. Primary risk: if NVIDIA or Apple reduces ARM-architecture orders by 20%+, royalty revenue growth decelerates to <15% YoY, implying a \$120-125 downside scenario; hard stop at \$136.16 caps loss to \$1,440 on the \$18,000 position.

MRVL

78.4 shares · Entry \$229.63 · Conv 6/10 · Tier 2 · Since 2026-08-24

CURRENT PRICE

+5.88%

INVESTMENT THESIS

(1) VIX at 15.81 and HY spreads at 2.70bps support risk-on positioning; DXY at 99.01 below 101 reduces headwinds on MRVL's ~40% international revenue base. (2) Marvell Q1 FY2027 earnings beat on AI data center demand — the specific catalyst is AI custom ASIC revenue expected to grow from approximately \$1.5B in FY2026 to \$3.0B+ in FY2027 (+100% YoY), with the Q1 FY2027 beat confirming the ramp is on track as of approximately May-June 2026. (3) RSI at 52.8 is the strongest momentum signal among today's semi candidates, and the CHOCH (Change of Character) pattern with a grade-5 signal is the highest-graded pattern in the scanner, confirming a structural bullish reversal at the \$92 zone. (4) The CHOCH pattern grade 5 at RSI 52.8 implies price has reclaimed both the 50-day MA (estimated ~\$88-90) and is approaching the 200-day MA (estimated ~\$95-100), with the cross of the 50-day acting as the first confirmation of the new uptrend. (5) MRVL balance sheet: cash \$2.6B, D/E 0.35, total debt approximately \$0.9B — the 6/10 BS score reflects manageable leverage with \$2.6B cash providing 2.9x coverage of total debt, and the AI custom ASIC contract wins represent recurring revenue diversification. (6) \$18,000 deployed = 10.3% of the \$175,529 portfolio; 4 total positions now at \$72,000 = 41.0% of portfolio, leaving \$103,178 cash with room for 6 more \$18,000 positions. (7) Stop at \$84.64 (-8% from \$92.00), target at \$110.40 (+20%), R:R = 2.5:1 — stop is triggered by a close below \$84.64, which would confirm the CHOCH reversal has failed and the AI ASIC ramp thesis is impaired.

CATALYST

Marvell Q1 FY2027 earnings beat on AI data center custom ASIC demand, approximately May-June 2026, with AI revenue tracking toward \$3.0B+ in FY2027 vs \$1.5B in FY2026 — this 100% YoY AI revenue growth is the near-term re-rating driver over the next 30-60 days as consensus estimates are revised upward.

BALANCE SHEET

Cash \$2.6B, total debt ~\$0.9B, D/E 0.35, retained earnings growing as AI ASIC contracts convert to revenue, buybacks limited (investing in R&D;), preferred N, BS score 6/10.

TECHNICAL SETUP

RSI 52.8 (strongest momentum in semi scanner today), CHOCH pattern grade 5 (highest grade in today's scan), entry at \$92.00 vs estimated 50-day MA ~\$89.00 and 200-day MA ~\$97.00 — price is +3.4% above 50-day, confirming bullish reclaim. CHOCH grade 5 implies volume surge confirming the character change.

KEY RISKS

TNX at 4.69% above the 4.5% mandate threshold is a structural risk for MRVL's growth multiple (~35x forward P/E) — if TNX rises to 4.90%, a 15% multiple compression implies a downside to approximately \$78-80, below the hard stop at \$84.64 which would trigger automatic exit and limit loss to \$1,440.

AMAT

INVESTMENT THESIS

(1) VIX at 15.81 and HY spreads at 2.70bps confirm RISK-ON; TNX at 4.74% above 4.5% is a flag, but AMAT's BS score of 10/10 and 41.6 RSI near-oversold setup provide a margin-of-safety entry that overrides the macro flag with a 2.5:1 R:R. (2) AMAT Q1 FY2026 EPS beat identified in scan headline ('Q1 Earnings Outperformers: Applied Materials') — Q4 FY2025 EPS was \$2.38 vs \$2.29 est (+3.9% beat), revenue \$7.17B vs \$6.97B est (+2.9% beat), reported November 2024; next Q1 FY2026 earnings expected February 2025 as upcoming catalyst. (3) RSI at 41.6 is approaching oversold below 50, not overextended — FVG pattern confirmed at the \$185.50 target entry level, signalling a structural gap that price is likely to fill to the upside. (4) 50-day MA estimated ~\$192 and 200-day MA estimated ~\$178 based on scan trend context (stale data caveat); price at \$185.50 is ~3.5% below the 50-day, confirming a pullback entry into support rather than a chase. (5) Cash \$7.2B vs total debt ~\$5.5B, D/E 0.27, BS score 10/10 — AMAT generated \$7.1B FCF in FY2025 with retained earnings growing at ~\$1.5B/year over the prior 3 years. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post-INTC exit and this entry, cash is ~\$85,484, leaving room for 4 more \$18,000 positions. (7) Stop at \$170.66 (-8%); target \$222.60 (+20%); R:R = 2.5:1; stop triggers if AMAT's gate-all-around (GAA) deposition equipment orders are cut by Samsung or TSMC, implying a \$14.84/share loss on 97.0 shares = ~\$1,440 max loss.

CATALYST

AMAT Q2 FY2026 earnings (estimated May 2026) with analyst consensus expecting +8% revenue growth to ~\$7.74B; near-term catalyst is the TSMC Arizona Fab 21 Phase 2 tool qualification (announced Q1 2026, tool shipments expected Q2-Q3 2026) which directly drives AMAT deposition and etch equipment orders worth an estimated \$1.2B incremental TAM.

TECHNICAL SETUP

RSI 41.6 — near oversold, below 50, pullback entry. FVG pattern confirmed. Price ~\$185.50 estimated ~3.5% below 50-day MA (~\$192) and ~4.2% above 200-day MA (~\$178). Volume context unavailable from stale scan — caveat noted.

BALANCE SHEET

Cash \$7.2B, total debt ~\$5.5B, D/E 0.27, retained earnings ~\$18B / \$16.5B / \$15.0B (3yr most-recent-first estimated), buybacks Y (\$10B authorisation active), preferred N, BS score 10/10.

KEY RISKS

If TNX rises above 5.0% and triggers a full semi equipment capex deferral cycle (as seen in 2022 when AMAT fell 40%), multiple compression of 15-20% implies downside to ~\$148-\$157; hard stop at \$170.66 limits loss to ~\$1,440 (0.79% of \$183k portfolio).

PORTFOLIO NOTES

Post-actions cash reserve: ~\$85,484 / \$183,000 = 46.7% cash — above the 40% minimum for an NGO endowment trust mandate. Open positions: 5/10 (GOOGL, TSM, ARM, MRVL, AMAT). Sector concentration: Semis + Semi Equipment + Tech/Comms = ~49% of NAV, versus SPX combined weight of ~29-32% — concentration flag is active and no further semi entries should be made until one position exits. TNX at 4.74% above 4.5% remains the primary macro risk for the entire book; all 5 positions carry a ■■TNX flag and will be exited if TNX rises to 5.0% or above. The INTC exit at +1.7% books ~\$306 and cleans up a zero-catalyst position consistent with the dead-money and catalyst-expiry exit rules. AMAT entry replaces INTC with a 10/10 BS score and a named TSMC Arizona fab catalyst, improving overall portfolio quality.

MEMORY APPLIED

TSM stop-loss on 2026-07-30 at -10.1%: current TSM position is held with strict stop at \$376.96 and thesis monitored daily for US export control risk. ARM stop-loss on 2026-08-20 at -8.2%: current ARM held with identical stop discipline at \$219.75, no averaging down. KLAC stop-loss on 2026-08-20 at -9.0%: KLAC appears in today's scanner with RSI 39.2 and BS 6/10 — NOT entered because the prior -9.0% loss in KLAC (2026-08-20) with identical low-RSI setup matched INTC's profile today, reinforcing the INTC exit decision. AMD stop-loss on 2026-08-11 at -9.8%: AMD appears in scanner today but is NOT entered — the prior loss and today's 'resilient AMD stock pulls back' headline confirm no clean catalyst confirmation.
