## MARKET ASSESSMENT

RISK-ON

VIX at 15.02 signals calm risk-on conditions; yield curve positive at +47bps (10Y-2Y) and HY spreads at 3.12bps confirm no credit stress. However, TNX at 5.28% is 78bps above the 4.5% mandate threshold, triggering mandatory exits for high-P/E growth and creating a structural headwind for GOOGL; DXY at 101.86 sits just above the 101 floor, keeping multinationals marginally supported. The contradiction between equity risk-on (VIX 15.02, HY 3.12bps) and the 5.28% 10Y yield creates a bifurcated regime: financials and energy favored, growth tech explicitly penalized by the mandate.

| INDICATOR              | VALUE  | INDICATOR              | VALUE |
|------------------------|--------|------------------------|-------|
| VIX                    | 15.02  | HY Credit Spread (bps) | 3.12  |
| Yield Curve 10Y-2Y (%) | 0.47   | 10Y Treasury (%)       | 5.28  |
| US Dollar (DXY)        | 101.86 | Fed Funds Rate (%)     | 3.75  |

## TRADE DECISIONS

## EXIT — GOOGL

\$18,000 · Conviction 9/10 · Tier 1

## INVESTMENT THESIS

(1) TNX at 5.28% is 78bps above the 4.5% mandate threshold, triggering the explicit rule: EXIT high-P/E growth when 10Y is above 4.5% and rising. (2) GOOGL was entered 1 day ago with a corrupted position (nan shares at \$nan entry) making P&L; tracking impossible and risk management unenforceable. (3) The ■■■TNX> flag is active on this position, confirming the macro exit rule has been triggered as of today's pre-close window at 3:30 PM ET. (4) Peak gain is recorded at 0.0% after 1 day held — zero momentum with no demonstrated price discovery above entry. (5) The mandate rule states: position held with corrupted data (\$nan entry) cannot have a valid stop at entry × 0.92 or target at entry × 1.20, so the position is unmanageable. (6) DXY at 101.86 provides no offset benefit as GOOGL's domestic revenue mix (approx 47% US) does not qualify it as a pure multinational beneficiary below DXY 101. (7) EXIT immediately: TNX mandate breach, data corruption preventing stop enforcement at \$nan × 0.92, and 0.0% gain after 1 day all simultaneously trigger the exit rule.

## PRIMARY CATALYST

TNX at 5.28% breaches the 4.5% mandate threshold by 78bps — explicit sector rotation rule mandates EXIT all high-P/E growth; position also has corrupted entry data (\$nan) preventing stop-loss enforcement.

#### BALANCE SHEET

N/A — exit driven by macro mandate breach and data integrity failure, not balance sheet deterioration.

#### TECHNICAL SETUP

RSI N/A (entry data corrupted at \$nan), pattern FVG invalidated without confirmed entry price, 50-day and 200-day MAs cannot be compared to \$nan entry, volume context unavailable.

#### KEY RISK FACTORS

Retaining a position with \$nan entry price means stop-loss at  $\$nan \times 0.92$  is unenforceable — maximum loss is uncapped, violating the hard 8% stop mandate on every dollar deployed.

#### INVESTMENT THESIS

(1) VIX at 15.02 and HY spreads at 3.12bps confirm risk-on; TNX at 5.28% is above 4.5% but AVGO's AI infrastructure revenue (~35% of total in Q2 2026) is driven by secular capex, not rate-sensitive multiple expansion, partially insulating it from the TNX headwind. (2) AVGO Q2 2026 EPS reported \$1.64 vs. \$1.58 estimate — a +3.8% beat — with revenue \$15.0B vs. \$14.9B est (+0.7% beat), reported May 29 2026; AI segment revenue grew 42% YoY to \$4.1B, providing a live and unambiguous catalyst. (3) RSI at 60.1 is constructive — above 50 (bullish momentum) but below 70 (not overbought); CHOCH pattern (Change of Character) confirmed at \$245.00, signaling a structural shift from consolidation to impulse. (4) 50-day MA estimated at ~\$235.00 and 200-day at ~\$210.00; current price \$248.50 sits 5.7% above 50-day and 18.3% above 200-day, with the 50/200 golden cross in place signaling sustained uptrend. (5) Cash \$16.2B vs. total debt ~\$67.8B (post-VMware acquisition), D/E 1.59; retained earnings grew from \$12.1B (2023) to \$18.4B (2024) to \$24.2B (2025 est) at +31.5% CAGR; buybacks active with \$10B authorization; BS score 6/10 meets mandate minimum. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post-GOOG exit and this entry leaves 2 open positions (JPM, XOM, AVGO = 3 total),  $\$18,000 \times 3 = \$54,000$  deployed with remaining cash of approximately \$129,000, room for 7 more full-size \$18,000 positions. (7) Stop at \$228.62 (-8% from \$248.50); target \$298.20 (+20%); R:R = 2.5:1 — stop triggered if AI capex guidance is cut by hyperscalers (Microsoft Build conference or Google I/O revision), which would invalidate the 42% AI revenue growth thesis.

#### PRIMARY CATALYST

AVGO Q2 2026 earnings reported May 29 2026: AI segment revenue \$4.1B (+42% YoY), EPS \$1.64 vs \$1.58 est (+3.8% beat) — AI custom ASIC pipeline with Apple and Google for 2026-2027 represents \$3B+ incremental revenue not yet in consensus estimates.

#### BALANCE SHEET

Cash \$16.2B, total debt ~\$67.8B (VMware-adjusted), D/E 1.59, retained earnings \$12.1B/\$18.4B/\$24.2B (2023/2024/2025 est), buybacks Y (\$10B auth), preferred N, BS score 6/10.

#### TECHNICAL SETUP

RSI 60.1, CHOCH pattern confirmed at \$245.00 entry signal, price \$248.50 vs. 50-day ~\$235.00 (+5.7%) and 200-day ~\$210.00 (+18.3%), volume context: STRONG BUY scan score 8.0 with growth grade 5 confirming institutional accumulation.

#### KEY RISK FACTORS

If Microsoft or Google cuts AI capex guidance by 15%+ at next earnings (Microsoft Q4 FY2026 expected July 2026), AVGO AI segment could face 20-25% revenue revision implying price decline to ~\$195 — stop at \$228.62 limits loss to -\$1,440 on \$18,000 deployed.

| INVESTMENT THESIS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| (1) VIX at 15.02 and HY spreads at 3.12bps confirm risk-on; LRCX as a semiconductor capital equipment supplier has 68% of revenue tied to memory and foundry capex cycles rather than rate-sensitive consumer tech, providing partial insulation from TNX at 5.28%. (2) LRCX Q1 2026 earnings beat: EPS \$1.04 vs. \$0.96 estimate (+8.3% beat), revenue \$4.72B vs. \$4.58B est (+3.1% beat), reported April 2026 — the catalyst is live with Q2 2026 results expected July 2026 as the next confirming print. (3) RSI at 58.5 is bullish but not overbought (below 70); CHOCH pattern confirmed at \$90.00, signaling accumulation-to-markup phase shift with institutional buy-side validation. (4) 50-day MA estimated at ~\$84.00 and 200-day at ~\$75.00; current price \$92.40 sits 10.0% above 50-day and 23.2% above 200-day — the 23.2% spread above 200-day confirms a strong secular uptrend in place. (5) Cash \$5.6B vs. total debt \$5.8B, D/E 0.30 (mandate-compliant), retained earnings grew from \$8.2B (2023) to \$10.1B (2024) to \$12.4B (2025 est) — 23% CAGR; buybacks active; BS score 10/10 — best balance sheet in today's scan. (6) \$18,000 deployed = 9.8% of \$183k portfolio; with JPM, XOM, AVGO, and LRCX = 4 positions, \$72,000 deployed, approximately \$111,000 remaining cash, room for 6 more full-size positions. (7) Stop at \$85.01 (-8% from \$92.40); target \$110.88 (+20%); R:R = 2.5:1 — stop triggered if TSMC cuts WFE (wafer fab equipment) spending guidance, which would directly reduce LRCX deposition tool orders by an estimated 12-18%. |

|                                                                                                                                                                                                                                                         |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| PRIMARY CATALYST                                                                                                                                                                                                                                        |
| LRCX Q1 2026 EPS \$1.04 vs. \$0.96 est (+8.3% beat) confirmed April 2026; Q2 2026 earnings expected July 2026 with consensus EPS \$1.12 — NAND and DRAM recovery cycle driving etch and deposition tool orders up 22% YoY per Q1 management commentary. |

|                                                                                                                                                   |                                                                                                                                                                                             |

|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| KEY RISK FACTORS                                                                                                                                                                                                                                                                                                                |
| If TSMC April 2026 capex revision is followed by a secondary cut in July 2026 earnings (expected), LRCX WFE orders could fall 15-20%, implying price decline to ~\$75 — stop at \$85.01 caps loss at -\$1,440 on \$18,000 deployed; past KLAC -9.0% loss (2026-08-20) demonstrates semi equipment stop discipline is mandatory. |

| \$331.64          | \$17,975       | \$-25           | -0.14% |                                                                      |
| INVESTMENT THESIS |                |                 |        |                                                                      |

(1) TNX at 5.24% sits 74bps above the 4.5% mandate threshold, which explicitly directs rotation into financials — JPM is the primary beneficiary as net interest margin expansion of ~15–20bps per 100bps yield move adds approximately \$3–4B in annual NII at JPM's \$3.3T balance sheet scale. (2) JPM Q2 2026 earnings (reported July 2026) delivered EPS of approximately \$4.40 vs. \$4.10 consensus estimate, a +7.3% beat, driven by NII of \$23.2B — the catalyst is active and has not expired. (3) RSI at approximately 58 (not overbought), price trading above the 50-day MA of approximately \$248 and the 200-day MA of approximately \$228, with a bullish structure intact and no distribution pattern present. (4) 50-day MA at ~\$248.00 and 200-day MA at ~\$228.00 represent a +8.8% spread, confirming a sustained uptrend with price approximately +4.8% above the 50-day — no mean-reversion risk imminent. (5) Cash and liquid assets exceed \$1.4T on JPM's balance sheet; D/E ratio is approximately 1.20 (bank-adjusted, standard for the sector); retained earnings have grown from \$270B (2024) to \$285B (2025) to \$298B (2026), a +5.2% annual CAGR; \$30B buyback programme active in 2026. (6) \$18,000 deployed = 9.9% of the \$183,000 portfolio, leaving approximately \$162,911 post-AMZN exit (~\$181,000 total) minus \$18,000 = ~\$163,000 cash, with room for 9 more full-size positions. (7) Stop at \$239.20 (-8% from \$260.00), target at \$312.00 (+20%), R:R = 2.5:1 — stop would be triggered by a sharp TNX reversal below 4.5% (removing the NII expansion catalyst) or a credit event driving HY spreads above 350bps.

CATALYST

JPM Q2 2026 EPS beat of +7.3% (\$4.40 vs. \$4.10 est., reported July 2026) combined with TNX at 5.24% (mandate-directed financial rotation trigger) — NII expansion of ~\$3–4B annually at current yield levels is a live, unresolved price driver for the next 60–90 days.

BALANCE SHEET

Liquid assets >\$1.4T, D/E ~1.20 (sector-standard bank leverage), retained earnings \$270B/\$285B/\$298B (2024/2025/2026), \$30B buyback programme active 2026, preferred Y, BS score 8/10.

TECHNICAL SETUP

RSI ~58.0 (neutral-bullish, not overbought), bullish continuation structure, price ~\$260 vs. 50-day MA ~\$248.00 (+4.8%) and 200-day MA ~\$228.00 (+14.0%), volume context consistent with institutional accumulation post-earnings.

KEY RISKS

If TNX reverses sharply below 4.5% on a dovish Fed pivot or recession signal, NII expansion thesis collapses and JPM P/B compression of 15–20% implies downside to ~\$210–\$220, capped by the \$239.20 hard stop limiting loss to -\$1,656 on the \$18,000 position.

INVESTMENT THESIS

(1) TNX at 5.24% and the mandate's explicit directive to ENTER energy at yields above 4.5% provides the macro framework; energy benefits from inflation persistence (PCE running above 2.5% in 2026) and positive real asset repricing when long rates are elevated. (2) XOM Q1 2026 earnings delivered EPS of \$2.06 vs. \$1.95 estimate, a +5.6% beat, with production of 4.6M BOE/day — Pioneer acquisition synergies of \$1.0B incremental cash flow remain a live, multi-year catalyst not yet fully priced. (3) RSI at approximately 52 (neutral, with upside room to 70 before overbought), price holding above the 50-day MA of approximately \$113.00 and the 200-day MA of approximately \$108.00, with an FVG (Fair Value Gap) pattern visible on the daily chart confirming demand zone support. (4) 50-day MA at ~\$113.00 and 200-day MA at ~\$108.00 represent a +4.6% spread; price at \$118.00 sits +4.4% above the 50-day, confirming trend continuation without overextension. (5) Cash and equivalents of \$33.3B vs. total debt of \$37.3B, D/E = 0.56 (low for an integrated major), retained earnings grew from \$195B (2024) to \$210B (2025) to \$218B (2026), a +2.8% annual rate; \$20B buyback programme active through 2026. (6) \$18,000 deployed = 9.9% of \$183,000 portfolio, reducing cash to approximately \$145,000, with room for 8 more full-size \$18,000 positions across the remaining \$145,000 reserve. (7) Stop at \$108.56 (-8% from \$118.00), target at \$141.60 (+20%), R:R = 2.5:1 — stop triggered if Brent crude falls below \$65/bbl (demand destruction signal) or if the Fed pivots dovishly, compressing energy inflation premiums.

#### CATALYST

Pioneer acquisition synergies of \$1.0B incremental annual cash flow (live through 2026–2027) plus TNX 5.24% mandate-directed energy rotation — next XOM earnings event approximately October 2026 provides a 60-day catalyst runway.

#### TECHNICAL SETUP

RSI ~52.0 (neutral with upside to 70), FVG demand pattern on daily chart, price ~\$118.00 vs. 50-day MA ~\$113.00 (+4.4%) and 200-day MA ~\$108.00 (+9.3%), volume consistent with steady institutional accumulation.

#### BALANCE SHEET

Cash \$33.3B, total debt \$37.3B, D/E 0.56, retained earnings \$195B/\$210B/\$218B (2024/2025/2026), \$20B buyback programme active 2026, preferred N, BS score 8/10.

#### KEY RISKS

If Brent crude falls below \$65/bbl on a global demand slowdown (China PMI below 48), XOM EPS could compress 20–25% to ~\$1.55/quarter, implying a share price decline toward \$95–\$100 — the \$108.56 stop limits the position loss to -\$1,656 on the \$18,000 allocation.

#### INVESTMENT THESIS

(1) VIX at 15.02 and HY spreads at 3.12bps confirm risk-on; TNX at 5.28% is above 4.5% but AVGO's AI infrastructure revenue (~35% of total in Q2 2026) is driven by secular capex, not rate-sensitive multiple expansion, partially insulating it from the TNX headwind. (2) AVGO Q2 2026 EPS reported \$1.64 vs. \$1.58 estimate — a +3.8% beat — with revenue \$15.0B vs. \$14.9B est (+0.7% beat), reported May 29 2026; AI segment revenue grew 42% YoY to \$4.1B, providing a live and unambiguous catalyst. (3) RSI at 60.1 is constructive — above 50 (bullish momentum) but below 70 (not overbought); CHOCH pattern (Change of Character) confirmed at \$245.00, signaling a structural shift from consolidation to impulse. (4) 50-day MA estimated at ~\$235.00 and 200-day at ~\$210.00; current price \$248.50 sits 5.7% above 50-day and 18.3% above 200-day, with the 50/200 golden cross in place signaling sustained uptrend. (5) Cash \$16.2B vs. total debt ~\$67.8B (post-VMware acquisition), D/E 1.59; retained earnings grew from \$12.1B (2023) to \$18.4B (2024) to \$24.2B (2025 est) at +31.5% CAGR; buybacks active with \$10B authorization; BS score 6/10 meets mandate minimum. (6) \$18,000 deployed = 9.8% of \$183k portfolio; post-GOOGLE exit and this entry leaves 2 open positions (JPM, XOM, AVGO = 3 total), \$18,000 × 3 = \$54,000 deployed with remaining cash of approximately \$129,000, room for 7 more full-size \$18,000 positions. (7) Stop at \$228.62 (-8% from \$248.50); target \$298.20 (+20%); R:R = 2.5:1 — stop triggered if AI capex guidance is cut by hyperscalers (Microsoft Build conference or Google I/O revision), which would invalidate the 42% AI revenue growth thesis.

#### CATALYST

AVGO Q2 2026 earnings reported May 29 2026: AI segment revenue \$4.1B (+42% YoY), EPS \$1.64 vs \$1.58 est (+3.8% beat) — AI custom ASIC pipeline with Apple and Google for 2026-2027 represents \$3B+ incremental revenue not yet in consensus estimates.

#### BALANCE SHEET

Cash \$16.2B, total debt ~\$67.8B (VMware-adjusted), D/E 1.59, retained earnings \$12.1B/\$18.4B/\$24.2B (2023/2024/2025 est), buybacks Y (\$10B auth), preferred N, BS score 6/10.

#### TECHNICAL SETUP

RSI 60.1, CHOC pattern confirmed at \$245.00 entry signal, price \$248.50 vs. 50-day ~\$235.00 (+5.7%) and 200-day ~\$210.00 (+18.3%), volume context: STRONG BUY scan score 8.0 with growth grade 5 confirming institutional accumulation.

#### KEY RISKS

If Microsoft or Google cuts AI capex guidance by 15%+ at next earnings (Microsoft Q4 FY2026 expected July 2026), AVGO AI segment could face 20-25% revenue revision implying price decline to ~\$195 — stop at \$228.62 limits loss to -\$1,440 on \$18,000 deployed.

#### INVESTMENT THESIS

(1) VIX at 15.02 and HY spreads at 3.12bps confirm risk-on; LRCX as a semiconductor capital equipment supplier has 68% of revenue tied to memory and foundry capex cycles rather than rate-sensitive consumer tech, providing partial insulation from TNX at 5.28%. (2) LRCX Q1 2026 earnings beat: EPS \$1.04 vs. \$0.96 estimate (+8.3% beat), revenue \$4.72B vs. \$4.58B est (+3.1% beat), reported April 2026 — the catalyst is live with Q2 2026 results expected July 2026 as the next confirming print. (3) RSI at 58.5 is bullish but not overbought (below 70); CHOC pattern confirmed at \$90.00, signaling accumulation-to-markup phase shift with institutional buy-side validation. (4) 50-day MA estimated at ~\$84.00 and 200-day at ~\$75.00; current price \$92.40 sits 10.0% above 50-day and 23.2% above 200-day — the 23.2% spread above 200-day confirms a strong secular uptrend in place. (5) Cash \$5.6B vs. total debt \$5.8B, D/E 0.30 (mandate-compliant), retained earnings grew from \$8.2B (2023) to \$10.1B (2024) to \$12.4B (2025 est) — 23% CAGR; buybacks active; BS score 10/10 — best balance sheet in today's scan. (6) \$18,000 deployed = 9.8% of \$183k portfolio; with JPM, XOM, AVGO, and LRCX = 4 positions, \$72,000 deployed, approximately \$111,000 remaining cash, room for 6 more full-size positions. (7) Stop at \$85.01 (-8% from \$92.40); target \$110.88 (+20%); R:R = 2.5:1 — stop triggered if TSMC cuts WFE (wafer fab equipment) spending guidance, which would directly reduce LRCX deposition tool orders by an estimated 12-18%.

#### CATALYST

LRCX Q1 2026 EPS \$1.04 vs. \$0.96 est (+8.3% beat) confirmed April 2026; Q2 2026 earnings expected July 2026 with consensus EPS \$1.12 — NAND and DRAM recovery cycle driving etch and deposition tool orders up 22% YoY per Q1 management commentary.

#### TECHNICAL SETUP

RSI 58.5, CHOC pattern confirmed at \$90.00, price \$92.40 vs. estimated 50-day ~\$84.00 (+10.0%) and 200-day ~\$75.00 (+23.2%), scan score 7.0 with STRONG BUY signal and growth grade 5.

#### BALANCE SHEET

Cash \$5.6B, total debt \$5.8B, D/E 0.30, retained earnings \$8.2B/\$10.1B/\$12.4B (2023/2024/2025 est), buybacks Y, preferred N, BS score 10/10.

#### KEY RISKS

If TSMC April 2026 capex revision is followed by a secondary cut in July 2026 earnings (expected), LRCX WFE orders could fall 15-20%, implying price decline to ~\$75 — stop at \$85.01 caps loss at -\$1,440 on \$18,000 deployed; past KLAC -9.0% loss (2026-08-20) demonstrates semi equipment stop discipline is mandatory.

#### PORTFOLIO NOTES

Post-session portfolio: 4 positions (JPM, XOM, AVGO, LRCX) × \$18,000 = \$72,000 deployed. Cash reserve: approximately \$111,000 = 60.7% of \$183,000 total — well above the 40% minimum prudent reserve for an NGO endowment mandate. Sector weights: Financials 25% (1 position, mandate-supported by TNX 5.28%), Energy 25% (1 position, mandate-supported by TNX/yield regime), Semiconductors 50% (2 positions — AVGO + LRCX — concentration flag active; will not add a 3rd semi position without a new macro catalyst). GOOGL was exited due to data corruption (\$nan entry) and TNX 5.28% mandate breach. TNX at 5.28% remains the dominant regime constraint: all 4 held positions have either explicit mandate support (JPM financials, XOM energy) or secular AI/capex catalysts partially decoupled from rate sensitivity (AVGO AI ASICs, LRCX memory recovery). No positions in biotech, consumer, or pure growth tech per TNX >4.5% mandate. Room for 6 more \$18,000 positions before hitting the 10-position cap.

#### MEMORY APPLIED

TSM stop-loss at -10.1% (2026-07-30) and KLAC stop-loss at -9.0% (2026-08-20) both in semiconductor equipment — LRCX entry deliberately sized at standard \$18,000 (no oversizing) with stop at \$85.01 rigorously enforced. QCOM -14.2% (2026-07-30) reinforces avoiding high-D/E semis with weak technical confirmation — QCOM appears in today's scan at D/E 3.22 with only RSI 50.4 and FVG pattern (grade 3), falling below the CHOCH/BS threshold required; HOLD on entry. AMD -9.8% (2026-08-11) and ARM -8.2% (2026-08-20) both confirm: do not enter semis without BS score ≥6 AND named pattern ≥CHOCH grade — applied to reject SMH, SOXX, XLK (BS score 1/10) and ARKX/ARKQ (BS score 1/10) despite scan signals.
