MARKET ASSESSMENT

RISK-ON

VIX at 15.81 signals calm, HY spreads at 2.75bps confirm healthy credit, and the 10Y-2Y curve is positive at +35bps — a full RISK-ON backdrop. Fed Funds at 3.63% vs 10Y at 4.48% keeps growth-multiple risk contained. All seven open positions sit in AI/semiconductor/mega-cap tech, so any new entry must be a non-duplicated sector to respect the overlap rule.

INVESTMENT THESIS

Highest scanner conviction (7.0) with a clear cloud capex tailwind confirmed by Google's earnings beat. Diversified cloud ETF reduces single-name risk while capturing the secular hyperscaler spend cycle.

CATALYST

Google earnings beat signaling accelerating cloud capex boom flowing into free cash flow across cloud infrastructure names.

BALANCE SHEET

Cash N/A vs Debt \$0B — D/E ratio N/A — Retained earnings N/A — Buffett score 1/10

TECHNICAL SETUP

RSI 39.6 — not overbought, leaving room to run; constructive mean-reversion entry rather than chasing extended momentum.

KEY RISKS

Cloud capex could compress near-term FCF; broad tech multiple compression if rates back up. 8% stop / 20% TP enforced.

INVESTMENT THESIS							
(1) Risk-on regime with tight HY spreads and positive yield curve fully supports cyclical AI/data center exposure. (2) AMD beat on earnings and raised guidance on AI and data center growth — a concrete, freshly confirmed company-level catalyst rather than speculation. (3) RSI at 55.5 sits in a constructive mid-range, above neutral but not overbought, with momentum aligning post-earnings; this is catalyst plus technical confirmation, not chasing an extended move. (4) Sizing at \$18,000 (~9.8%, just under the 10% cap) reflects an 8/10 conviction with a confirmed earnings beat and healthy RSI. (5) Primary risk is semiconductor sector volatility and competitive pressure from NVDA; managed via the 8% stop loss and 20% take profit, plus this adds compute/logic exposure distinct from my existing equipment names (KLAC).

INVESTMENT THESIS

(1) Risk-on regime with tight HY spreads (2.78bps) and positive yield curve provides a supportive backdrop for high-beta AI leadership. (2) Nvidia reported an earnings and guidance beat as the AI boom continues to push data center revenue to record levels, validating the secular capex cycle. (3) Technically, RSI sits at a deeply oversold 37.5 — a constructive pullback within an uptrend that offers a favorable entry rather than chasing momentum, satisfying the dual catalyst+chart confirmation rule. (4) Sizing at the full \$18,000 (~9.8%) cap is justified by the scanner's 9.0 conviction, pristine balance sheet, and dominant moat, while staying under the 10% per-position limit. (5) Primary risk is sector concentration overlap with TSM/AMD/KLAC; this is managed via an 8% hard stop (~\$481 implied) and the 20% take-profit discipline, with NVDA's diversified AI demand reducing idiosyncratic single-customer risk.

CATALYST

Q earnings and guidance beat driven by record data center AI revenue.

BALANCE SHEET

Cash \$10.61B vs Debt \$8.47B — D/E ratio 0.05 — Retained earnings growing (+116%) — Buffett score 9/10

TECHNICAL SETUP

RSI 37.5 oversold bounce setup within secular uptrend; STRONG BUY signal, buying the dip rather than chasing.

KEY RISKS

Heavy semiconductor concentration in portfolio; AI capex digestion risk; high-beta drawdown in any VIX spike.

INVESTMENT THESIS

(1) HY spreads at 2.83bps and a +31bps positive curve keep large-cap software multiples expanding with VIX contained at 18.37. (2) The next-phase Microsoft-OpenAI partnership headline plus FY26 Q1 cloud momentum where Azure grew ~30% YoY drives the catalyst window. (3) RSI at 40.4 is oversold-to-neutral, forming a bullish reversal base off recent lows rather than an extended top. (4) Entry \$478.50 is positioned for mean reversion toward the 50-day and 200-day MA cluster as RSI lifts off 40. (5) Cash \$30.2B against modest leverage with D/E of just 0.13 gives the lowest balance-sheet risk in the scanner. (6) Retained earnings have compounded across the last three fiscal years signalling durable internal capital generation funding both buybacks and AI capex. (7) Primary downside is an AI-capex margin scare; if shares break \$440 the stop at \$440.22 caps loss at 8% (~\$1,440 on this position).

CATALYST

Microsoft-OpenAI next-phase partnership announcement plus FY26 Q1 Azure growth ~30% YoY — near-term re-rating driver as enterprise AI bookings convert to revenue.

BALANCE SHEET

Cash \$30.24B vs Debt \$43.15B — D/E ratio 0.13 — Retained earnings growing (+37%) — Buffett score 9/10

TECHNICAL SETUP

RSI 40.4, bullish base/reversal off lows, price below 50-day and 200-day MA cluster offering mean-reversion entry, volume in line with 20-day avg.

KEY RISKS

AI capex overspend compressing FCF could trigger 10-15% drawdown; stop at \$440.22 limits loss to ~8% (~\$1,440).

INVESTMENT THESIS			
(1) Macro: VIX 16.15, HY spreads 2.74bps and +35bps curve keep the risk-on multiple intact; CME FedWatch prices a Fed Funds hold near 3.63%. (2) QCOM posted record revenue guidance with an EPS beat and expanded buyback authorization reported in its latest quarter, scanning 9.0 STRONG BUY. (3) Entry trigger: RSI 38.1 is oversold with a basing pattern, and I confirm entry at \$152.40 on the bounce off the lower band. (4) 50-day near \$158.20 and 200-day near \$166.40 — price sits ~4% below the 50-day, a mean-reversion setup toward the declining gap. (5) Balance sheet: cash \$5.5B, D/E 3.22 is elevated but offset by consistent buybacks and record cash flow; BS score 6/10. (6) Sizing: \$18,000 = 9.8% of the \$183k book, leaves \$45,986 cash and room for 3 more full-size positions at the 10-position cap. (7) Stop at \$140.21 (-8%), target \$182.88 (+20%), R:R = 2.5:1 — a break below \$140.21 on failed guidance follow-through triggers the exit.			

CATALYST

QCOM record revenue guidance and expanded buyback program — near-term driver as buyback support cushions the RSI 38.1 oversold level.

BALANCE SHEET

Cash \$5.5B, total debt ~\$17.7B, D/E 3.22, buybacks Y, preferred N, BS score 6/10.

TECHNICAL SETUP

RSI 38.1, oversold basing pattern, price \$152.40 vs 50-day \$158.20 and 200-day \$166.40, volume roughly in-line with 20-day avg.

KEY RISKS

If handset demand softens and guidance is cut, QCOM re-rates 8-10%; stop at \$140.21 caps loss to \$1,440 on the \$18k position.

PORTFOLIO NOTES

Cash reserve \$45,986 = 26.4% of \$174,062 total. All 7 open positions are AI/semis/mega-cap tech — extreme sector concentration far above the SPX ~30% tech weight, flag: Y. Sector-overlap rule blocks every RISK-ON scanner name today (NVDA, QCOM, AVGO, ARM, GOOGL, INTC, LRCX, KLAC, ASML, MRVL, MSFT are all semis/tech and duplicate existing exposure). No new entry satisfies the non-duplication requirement, so no capital deployed. Holding 3 open slots in reserve.

MEMORY APPLIED

AVGO 2026-06-26 -9.9% stop-out and AMAT 2026-07-02 -8.9% stop-out both flagged 'verify thesis before full sizing.' Declined AVGO re-entry directly on that lesson plus its 1.59 D/E. Every other STRONG BUY signal is a semiconductor/tech name that duplicates NVDA/AMD/TSM/QCOM/MSFT/GOOGL exposure, so sector-overlap discipline overrides scanner conviction — no trades executed.
