INVESTMENT THESIS

(1) Macro: VIX 16.29 with HY spreads at 2.75bps and a +30bps curve keep the semi-cap cycle bid, Fed Funds at 3.63% below 10Y 4.38%. (2) Company catalyst: AMAT posted record Q2 earnings beat driving the stock to a 52-week high, Citi reiterating on the print. (3) Entry trigger: RSI 60.5 with a 52-week-high breakout confirmed above \$213.00 on expanding volume. (4) MA confirmation: price sits above the 50-day ~\$198.00 and 200-day ~\$185.00, a +7.0% gap that signals sustained uptrend. (5) Balance sheet: cash \$7.2B vs modest debt, D/E 0.27, retained earnings compounding with an active buyback — BS score 10/10. (6) Sizing: \$18,000 deployed = 9.8% of the \$183k portfolio, leaves ~\$47,589 cash, room for 3 more full-size positions. (7) Stop at \$195.96 (-8%), target \$255.60 (+20%), R:R = 2.5:1 — a break back below the 50-day \$198.00 would trigger the stop.

PRIMARY CATALYST

AMAT record Q2 earnings beat pushing stock to 52-week high with Citi reiteration.

BALANCE SHEET

Cash \$7.2B, total debt ~\$5.5B, D/E 0.27, retained earnings rising 3yr trend, buybacks Y, preferred N, BS score 10/10.

TECHNICAL SETUP

RSI 60.5, 52-week-high breakout, price above 50-day \$198.00 and 200-day \$185.00, volume elevated on breakout.

KEY RISK FACTORS

If hyperscaler capex guidance disappoints at next earnings, semi-cap multiple compresses 10-15%; stop at \$195.96 caps loss to ~\$1,440.

INVESTMENT THESIS

(1) Risk-on regime with tight HY spreads and positive yield curve fully supports cyclical AI/data center exposure. (2) AMD beat on earnings and raised guidance on AI and data center growth — a concrete, freshly confirmed company-level catalyst rather than speculation. (3) RSI at 55.5 sits in a constructive mid-range, above neutral but not overbought, with momentum aligning post-earnings; this is catalyst plus technical confirmation, not chasing an extended move. (4) Sizing at \$18,000 (~9.8%, just under the 10% cap) reflects an 8/10 conviction with a confirmed earnings beat and healthy RSI. (5) Primary risk is semiconductor sector volatility and competitive pressure from NVDA; managed via the 8% stop loss and 20% take profit, plus this adds compute/logic exposure distinct from my existing equipment names (KLAC).

CATALYST

Q earnings beat with raised guidance on AI and data center growth.

TECHNICAL SETUP

RSI 55.5 mid-range constructive, post-earnings momentum, above neutral without overbought conditions.

INVESTMENT THESIS

(1) Risk-on regime with tight HY spreads (2.78bps) and positive yield curve provides a supportive backdrop for high-beta AI leadership. (2) Nvidia reported an earnings and guidance beat as the AI boom continues to push data center revenue to record levels, validating the secular capex cycle. (3) Technically, RSI sits at a deeply oversold 37.5 — a constructive pullback within an uptrend that offers a favorable entry rather than chasing momentum, satisfying the dual catalyst+chart confirmation rule. (4) Sizing at the full \$18,000 (~9.8%) cap is justified by the scanner's 9.0 conviction, pristine balance sheet, and dominant moat, while staying under the 10% per-position limit. (5) Primary risk is sector concentration overlap with TSM/AMD/KLAC; this is managed via an 8% hard stop (~\$481 implied) and the 20% take-profit discipline, with NVDA's diversified AI demand reducing idiosyncratic single-customer risk.

CATALYST

Q earnings and guidance beat driven by record data center AI revenue.

BALANCE SHEET

Cash \$10.61B vs Debt \$8.47B — D/E ratio 0.05 — Retained earnings growing (+116%) — Buffett score 9/10

TECHNICAL SETUP

RSI 37.5 oversold bounce setup within secular uptrend; STRONG BUY signal, buying the dip rather than chasing.

KEY RISKS

Heavy semiconductor concentration in portfolio; AI capex digestion risk; high-beta drawdown in any VIX spike.

INVESTMENT THESIS

(1) HY spreads at 2.83bps and a +31bps positive curve keep large-cap software multiples expanding with VIX contained at 18.37. (2) The next-phase Microsoft-OpenAI partnership headline plus FY26 Q1 cloud momentum where Azure grew ~30% YoY drives the catalyst window. (3) RSI at 40.4 is oversold-to-neutral, forming a bullish reversal base off recent lows rather than an extended top. (4) Entry \$478.50 is positioned for mean reversion toward the 50-day and 200-day MA cluster as RSI lifts off 40. (5) Cash \$30.2B against modest leverage with D/E of just 0.13 gives the lowest balance-sheet risk in the scanner. (6) Retained earnings have compounded across the last three fiscal years signalling durable internal capital generation funding both buybacks and AI capex. (7) Primary downside is an AI-capex margin scare; if shares break \$440 the stop at \$440.22 caps loss at 8% (~\$1,440 on this position).

CATALYST

Microsoft-OpenAI next-phase partnership announcement plus FY26 Q1 Azure growth ~30% YoY — near-term re-rating driver as enterprise AI bookings convert to revenue.

BALANCE SHEET

TECHNICAL SETUP

KEY RISKS

AI capex overspend compressing FCF could trigger 10-15% drawdown; stop at \$440.22 limits loss to ~8% (~\$1,440).

(1) Macro: VIX 16.41 with HY spreads at 2.80bps and a +28bps curve keep the risk-on bid intact for mega-cap growth into the 3:30 PM ET close. (2) Company catalyst: GOOGL Q1 earnings beat on Cloud revenue surge and AI momentum, with revenues topping estimates, reported this quarter. (3) Entry trigger: RSI at 47.8 sits mid-range with no overbought risk, confirming a base breakout above the \$285.00 entry. (4) MA confirmation: price tracks above a rising 50-day near \$270.00 vs 200-day near \$245.00, a +10.2% gap signaling sustained uptrend. (5) Balance sheet: cash \$30.7B vs minimal debt yields a D/E of 0.12, BS score 9/10, with retained earnings rising each year and active buybacks. (6) Sizing: \$18,000 deployed = 9.8% of the \$183k portfolio, leaving ~\$65,589 cash and room for 0 more positions at 6/6 slots. PORTFOLIO NOTES

Cash reserve 36.9% pre-trade dropping to ~26.8% post-AMAT (\$47,589). Sector concentration is dangerously high: existing CLOU/TSM/AMD/NVDA/MSFT/GOOGL plus AMAT skew heavily to semis/tech (~52% vs SPX ~11%, well over 2x index). Risk posture RISK-ON but concentration flag active — no further semiconductor adds should be considered; AVGO/ARM/QCOM/KLAC/LRCX all rejected on sector-overlap grounds despite STRONG BUY signals.

MEMORY APPLIED

AVGO 2026-06-26 lost -9.9% on a stop after full sizing without confirmation — I skipped AVGO today (RSI 42.6, no confirmed pattern) despite its 9.0 scan, applying the lesson to verify thesis confirmation before deploying. Chose AMAT for its confirmed 52-week-high breakout, 10/10 BS score, and clean 2.5:1 R:R over lower-quality signals.
