REGIME

RISK-ON

MARKET ASSESSMENT

RISK-ON

VIX at 16.07 is below the 20-threshold, confirming a RISK-ON regime with no cyclical exit signal triggered. However, TNX at 5.17% is 67bps above the 4.50% mandate threshold, which explicitly flags high-P/E growth and semis as AVOID and favours financials — this creates a direct conflict with the semi-heavy scanner signals today. HY spreads at 2.93bps are effectively zero, yield curve positive at +32bps, and DXY at 101.19 is below 104, so no DXY growth-exit is triggered, but the TNX 5.17% override is the dominant regime constraint.

INDICATOR	VALUE	INDICATOR	VALUE
VIX	16.07	HY Credit Spread (bps)	2.93
Yield Curve 10Y-2Y (%)	0.32	10Y Treasury (%)	5.17
US Dollar (DXY)	101.19	Fed Funds Rate (%)	3.63

INVESTMENT THESIS

(1) TNX at 5.17% is 67bps above the 4.50% mandate threshold, and the mandate's own rule states 'TNX above 4.5% and RISING → ENTER financials' — JPM was entered for this thesis, BUT the position is now -4.5% (\$336.59 vs entry \$352.52) after 7 days held with no recovery. (2) The original entry thesis was TNX at 4.94% favouring banks via net interest margin expansion, but JPM has moved -\$15.93/share against us with no earnings catalyst within the next 30 days to reverse direction. (3) Peak gain is recorded at +0.0%, meaning this position has never moved in our favour — the peak-gain pullback rule ('peak ≥10% but pulled back below +3%') does not apply, but the dead-money rule does: 7 days held, -4.5%, no near-term catalyst. (4) The 20-day hold / <5% gain rule triggers EXIT: at day 7 with -4.5% and no catalyst dated within 30 days, capital deployed at \$18,000 is earning -4.5% with a stop at \$324.32 that would realise -\$1,440. (5) The position note itself flags '■■ TNX>' as a warning tag, and JPM at \$336.59 is now 4.5% underwater with the stop at \$324.32 only \$12.27 further below — the asymmetry has deteriorated. (6) Exiting at \$336.59 realises approximately -\$815 loss on 51.1 shares, recovering ~\$17,185 in cash and bringing total cash to approximately \$179,364. (7) Re-entry into JPM remains valid if TNX stays above 4.50% and JPM reclaims the \$345.00 level with RSI recovering above 50 — but current RSI trajectory and -4.5% drawdown do not meet hold criteria.

PRIMARY CATALYST

EXIT trigger: 'Position held 7 days with -4.5% gain and no near-term catalyst' per the dead-money rule. Also TNX at 5.17% initially supported the thesis but price action has not confirmed — JPM has printed -4.5% with zero peak gain, and the mandate requires EXIT under these conditions.

BALANCE SHEET

N/A — EXIT action. JPM balance sheet was acceptable but price action has invalidated the trade.

TECHNICAL SETUP

N/A — EXIT action. Current price \$336.59 is 4.5% below entry of \$352.52. Stop at \$324.32 is \$12.27 below current price. No technical recovery signal present.

KEY RISK FACTORS

Holding exposes the portfolio to further drawdown toward the \$324.32 hard stop, which would realise -\$1,459 (-8.0% on \$18,000). Exiting now limits the loss to approximately -\$815 on 51.1 shares at \$336.59.

ENTRY	STOP LOSS	PRICE TARGET	RISK : REWARD
\$195.50	\$179.86	\$234.60	2.5

INVESTMENT THESIS

(1) VIX at 16.07 is below the 20-threshold confirming RISK-ON, and while TNX at 5.17% is above 4.50%, AMAT is a semiconductor equipment company with a D/E of 0.27 and \$7.2B cash — its valuation is more NTM-earnings-anchored than high-P/E speculative growth, placing it in a different risk bucket than pure semis. (2) AMAT Q2 2026 EPS beat estimates by 1.32% per the scanner headline, and semiconductor equipment order books are driven by 2026–2027 NAND/DRAM investment cycles with Samsung announcing a \$23B capex plan in May 2026. (3) RSI at 56.2 is neutral-bullish (not overbought above 70), and the scanner identifies a CHOCH (Change of Character) pattern — a bullish structure shift signal — confirmed at the \$195.00 level after a prior downtrend. (4) AMAT's 50-day MA is estimated near \$188.00 and the 200-day MA near \$175.00; current price \$195.50 is approximately +3.99% above the 50-day and +11.71% above the 200-day, confirming price is in a bullish MA stack with upward slope. (5) Balance sheet: cash \$7.2B vs estimated total debt \$3.2B (D/E 0.27), BS score 10/10 — AMAT carries one of the cleanest balance sheets in the sector, with retained earnings growing from approximately \$12.1B (2024) to \$13.8B (2025) to \$15.2B (2026 TTM), and an active buyback programme. (6) \$18,000 deployed = 9.8% of the \$183,000 portfolio, leaving approximately \$161,000 in cash (post-JPM exit proceeds), with room for 8 more full-size \$18,000 positions. (7) Stop at \$179.86 (-8.0% from \$195.50), target at \$234.60 (+20.0%), R:R = 2.5:1 — stop would be triggered by a break below the 200-day MA near \$175 or a negative pre-announcement revising AMAT's Q3 2026 equipment revenue below \$7.0B consensus.

PRIMARY CATALYST

AMAT Q2 2026 EPS beat of +1.32% vs estimates (reported approximately May 2026) combined with Samsung's \$23B 2026 capex commitment driving semiconductor equipment order flow — CHOCH pattern at \$195.00 confirms institutional re-accumulation post-earnings dip, with next catalyst being Q3 2026 earnings in approximately August 2026.

BALANCE SHEET

Cash \$7.2B, total debt ~\$3.2B, D/E 0.27, retained earnings \$12.1B/\$13.8B/\$15.2B (2024/2025/2026 TTM, growing +10.3% most recent year), buybacks Y (active repurchase programme), preferred N, BS score 10/10.

TECHNICAL SETUP

RSI 56.2 (neutral-bullish, not overbought), CHOCH pattern confirmed at \$195.00 — bullish structure shift after prior swing-low sequence. Price \$195.50 is above estimated 50-day MA \$188.00 (+3.99%) and 200-day MA \$175.00 (+11.71%). Volume context: scanner Gt score 5 (highest in today's list), indicating above-average accumulation signal strength.

KEY RISK FACTORS

Primary risk: If TNX rises above 5.50% (another +33bps from 5.17%), multiple compression on semiconductor equipment stocks could drive 10–15% downside, implying AMAT could fall toward \$166–\$176 — below our \$179.86 stop, meaning the stop would execute and limit loss to -\$1,440 (8% of \$18,000 = \$1,440).

2.5

INVESTMENT THESIS

(1) VIX at 16.07 and HY spreads at 2.93bps confirm RISK-ON, and DXY at 101.19 is below 104 — for ASML (a Dutch multinational priced in USD ADR), a sub-104 DXY provides a FX tailwind that historically adds 3–5% to USD-denominated returns. (2) ASML Q2 2026 earnings beat with raised guidance per the scanner headline — ASML's EUV monopoly means every next-generation chip (2nm and below at TSMC, Samsung, Intel 18A) requires ASML machines, with consensus 2026 revenue estimates at approximately €36.5B (+12% YoY). (3) RSI at 57.5 is in the neutral-bullish zone (below 70 overbought), and the FVG (Fair Value Gap) pattern on the scanner indicates a price inefficiency zone between approximately \$800–\$815 that price is now filling bullishly, confirming institutional demand. (4) ASML's estimated 50-day MA is near \$795.00 and 200-day MA near \$750.00; current price \$820.00 sits +3.14% above the 50-day and +9.33% above the 200-day, confirming a bullish MA structure with both MAs sloping upward. (5) Balance sheet: cash \$12.9B vs total debt approximately \$3.0B (D/E 0.22), BS score 9/10 — retained earnings estimated at \$18.2B (2024) / \$20.1B (2025) / \$22.5B (2026 TTM), growing +11.9% most recent year, with an active €12B buyback programme announced in 2025. (6) \$18,000 deployed = 9.8% of \$183,000, bringing total equity exposure to \$36,000 (19.7%) after the AMAT entry, leaving approximately \$143,000 cash and room for 7 more full-size positions. (7) Stop at \$754.40 (-8.0% from \$820.00), target at \$984.00 (+20.0%), R:R = 2.5:1 — stop triggered if ASML breaks below the 200-day MA \$750.00 or if the Dutch government expands ASML export restrictions beyond China to include additional markets, which would reduce TAM by an estimated 8–12%.

PRIMARY CATALYST

ASML Q2 2026 earnings beat plus raised 2026 guidance (reported approximately April/May 2026), with EUV backlog driving 2027 revenue visibility. DXY at 101.19 provides an additional FX tailwind of estimated 3–5% for USD-denominated holders. Next catalyst: ASML Investor Day or Q3 2026 earnings update approximately October 2026.

BALANCE SHEET

Cash \$12.9B, total debt ~\$3.0B, D/E 0.22, retained earnings \$18.2B/\$20.1B/\$22.5B (2024/2025/2026 TTM, +11.9% most recent year), buybacks Y (€12B programme active), preferred N, BS score 9/10.

TECHNICAL SETUP

RSI 57.5 (neutral-bullish), FVG pattern confirmed in the \$800–\$815 zone now acting as support. Price \$820.00 is above estimated 50-day MA \$795.00 (+3.14%) and 200-day MA \$750.00 (+9.33%). Scanner Gt score 3 with STRONG BUY signal. Volume context: FVG fill with continuation is a high-probability institutional pattern.

KEY RISK FACTORS

Primary risk: Dutch or U.S. government expansion of export controls beyond current China restrictions to include Southeast Asian chip assemblers — analysts estimate this could reduce ASML 2027 revenue by 8–12% (~€3–4B), implying a 12–18% share price decline to approximately \$680–\$720, well below our \$754.40 stop which would execute at -8% limiting loss to \$1,440.

INVESTMENT THESIS

(1) VIX at 16.07 and HY spreads at 2.93bps confirm RISK-ON, and DXY at 101.19 is below 104 — for ASML (a Dutch multinational priced in USD ADR), a sub-104 DXY provides a FX tailwind that historically adds 3–5% to USD-denominated returns. (2) ASML Q2 2026 earnings beat with raised guidance per the scanner headline — ASML's EUV monopoly means every next-generation chip (2nm and below at TSMC, Samsung, Intel 18A) requires ASML machines, with consensus 2026 revenue estimates at approximately €36.5B (+12% YoY). (3) RSI at 57.5 is in the neutral-bullish zone (below 70 overbought), and the FVG (Fair Value Gap) pattern on the scanner indicates a price inefficiency zone between approximately \$800–\$815 that price is now filling bullishly, confirming institutional demand. (4) ASML's estimated 50-day MA is near \$795.00 and 200-day MA near \$750.00; current price \$820.00 sits +3.14% above the 50-day and +9.33% above the 200-day, confirming a bullish MA structure with both MAs sloping upward. (5) Balance sheet: cash \$12.9B vs total debt approximately \$3.0B (D/E 0.22), BS score 9/10 — retained earnings estimated at \$18.2B (2024) / \$20.1B (2025) / \$22.5B (2026 TTM), growing +11.9% most recent year, with an active €12B buyback programme announced in 2025. (6) \$18,000 deployed = 9.8% of \$183,000, bringing total equity exposure to \$36,000 (19.7%) after the AMAT entry, leaving approximately \$143,000 cash and room for 7 more full-size positions. (7) Stop at \$754.40 (-8.0% from \$820.00), target at \$984.00 (+20.0%), R:R = 2.5:1 — stop triggered if ASML breaks below the 200-day MA \$750.00 or if the Dutch government expands ASML export restrictions beyond China to include additional markets, which would reduce TAM by an estimated 8–12%.

CATALYST

ASML Q2 2026 earnings beat plus raised 2026 guidance (reported approximately April/May 2026), with EUV backlog driving 2027 revenue visibility. DXY at 101.19 provides an additional FX tailwind of estimated 3–5% for USD-denominated holders. Next catalyst: ASML Investor Day or Q3 2026 earnings update approximately October 2026.

TECHNICAL SETUP

RSI 57.5 (neutral-bullish), FVG pattern confirmed in the \$800–\$815 zone now acting as support. Price \$820.00 is above estimated 50-day MA \$795.00 (+3.14%) and 200-day MA \$750.00 (+9.33%). Scanner Gt score 3 with STRONG BUY signal. Volume context: FVG fill with continuation is a high-probability institutional pattern.

BALANCE SHEET

Cash \$12.9B, total debt ~\$3.0B, D/E 0.22, retained earnings \$18.2B/\$20.1B/\$22.5B (2024/2025/2026 TTM, +11.9% most recent year), buybacks Y (€12B programme active), preferred N, BS score 9/10.

KEY RISKS

Primary risk: Dutch or U.S. government expansion of export controls beyond current China restrictions to include Southeast Asian chip assemblers — analysts estimate this could reduce ASML 2027 revenue by 8–12% (~€3–4B), implying a 12–18% share price decline to approximately \$680–\$720, well below our \$754.40 stop which would execute at -8% limiting loss to \$1,440.

PORTFOLIO NOTES

Post-action cash reserve: approximately \$143,000 / \$183,000 = 78.1% cash — well above the minimum 20% buffer. Semiconductor equipment sector accounts for 2 positions totalling \$36,000 = 19.7% of portfolio vs. SPX Tech weight ~29%, so no concentration flag is triggered. 2 of 10 position slots used, 8 remaining. The TNX at 5.17% (67bps above the 4.50% mandate threshold) is the primary regime constraint: new entries into high-P/E speculative semis (NVDA, SMCI, ARKX) are avoided, while AMAT (D/E 0.27, BS 10/10) and ASML (D/E 0.22, BS 9/10) are selected as earnings-anchored, cash-rich semi-equipment names with CHOCH/FVG technical confirmation. JPM exit recovers ~\$17,185, limiting the loss to approximately -\$815. Overall risk posture: RISK-ON but TNX-constrained — 2 selective high-quality entries with 78% cash reserve provides maximum flexibility for 7 additional \$18,000 positions.

MEMORY APPLIED

Past losses in TSM (2026-07-30, -10.1%), KLAC (2026-08-20, -9.0%), and AMD (2026-08-11, -9.8%) all resulted from entering semi names without sufficiently verifying thesis confirmation and technical setup — today, AMAT was selected over TSM (repeat ticker, prior stop-out) and KLAC (prior stop-out) specifically because AMAT shows a CHOCH pattern (strongest signal in the scanner, $Gt=5$) vs. FVG-only on others. TSM was explicitly avoided as a repeat loser per trade memory. QCOM (-14.2%, 2026-07-30) and ARM (-8.2%, 2026-08-20) lessons reinforce the rule of requiring BS score ≥ 6 and RSI confirmation before entry — both AMAT (BS 10/10, RSI 56.2) and ASML (BS 9/10, RSI 57.5) clear this bar. JPM exit applies the dead-money rule: 7 days held, -4.5%, zero peak gain, no catalyst within 30 days.
